WEEKLY EARNINGS AND HOURS OF WORK OF MALE AND FEMALE WAGE-EARNERS EMPLOYED IN THE MANUFACTURING INDUSTRIES OF CANADA, 1940.

The present report embodies the results of the survey for the year 1940 of weekly earnings and hours worked by wage-earners employed in the manufacturing industries of Canada. The questions relating to earnings and hours were embodied in the forms used in compiling the census of manufactures and for this reason all firms reporting under this category are covered.

Owing to the nature of averages, it becomes difficult in some cases to measure changes in weekly earnings from year to year or week to week. Even when actual earnings increase, the average for an industry or a locality may in some cases show a decrease. Such a condition might arise during periods of accelerated operations through the employment of a proportionately larger number of lower paid workers as compared with those at higher rates of pay. The converse might be true when operations decline. This situation affects particularly small industries or localities employing few workers.

1. Analysis of Weekly Earnings of Male Wage-earners

Average weekly earnings of male wage-earners employed in the manufacturing industries of Canada as a whole amounted to $24.78 in 1940, an increase of $4.47 or 22 per cent as compared with 1934. However, due to an increase of one hour in the average hours worked per week, average hourly earnings advanced from 40.7 cents in 1934 to 48.7 cents in 1940, an increase of only 19.6 per cent. Male wage-earners in Ontario received the highest average earnings of $26.63 per week. British Columbia came second with $26.00, followed by Manitoba with $24.30, Quebec $22.75, Alberta $22.53, Saskatchewan $20.67, New Brunswick $20.54, Nova Scotia $20.47 and Prince Edward Island $15.31.

In comparing weekly earnings of the major industrial groups, it is found that the iron and steel group reported the highest earnings of $30.00 per week, being followed by the other groups in the order named: non-ferrous metal products $27.45, non-metallic mineral products $24.90, chemicals and allied products $24.16, wood and paper products $22.10, animal products $21.98, textiles and textile products $21.79, vegetable products $21.25, and miscellaneous industries $20.82.

Average weekly earnings in 1940 in the forty industries employing the greatest number of male wage-earners ranged from $39.08 for automobiles to $17.26 for sawmills. In only five industries were weekly earnings above $30.00. These industries in order of their importance were: Automobiles, automobile supplies, petroleum products, shipbuilding and repairs, and aircraft. In seventeen other industries earnings ranged between $25 and $30 per week. In thirteen others they received between $20 and $25, while in only five were they below $20 per week. For details of weekly, hourly and annual earnings of male wage-earners, see Table 7.

2. Analysis of Weekly Earnings of Female Wage-earners

Female wage-earners received on an average $13.49 per week in 1940, an increase of $1.69 as compared with 1934. Workers in Ontario with $14.37 per week were paid the highest wages. British Columbia and Manitoba, each with $13.60 ranked second, followed by Quebec with $12.70, Alberta $12.69, New Brunswick $11.64, Saskatchewan $11.61, Nova Scotia $11.19, and Prince Edward Island $7.71.

Female wage-earners in the iron and its products group received the highest wage of $15.87 per week, while in the vegetable products group they received the lowest wage of $12.02. In the textiles and textile products group which employs almost half the number of female wage-earners employed in manufacturing, the average wage was $14.02, fifty-three cents above the average for all groups.

WEEKLY EARNINGS IN MANUFACTURING INDUSTRIES, 1940.

Average weekly earnings of female wage-earners have a narrower range than those of male workers. Weekly earnings in the forty industries employing the greatest number of female wage-earners ranged in 1940 from $18.67 for the fur goods industry to $10.84 for fruit and vegetable preparations. In only seven industries were average weekly earnings above $15.00. These were: fur goods, automobile supplies, clothing contractors, hats and caps, narrow fabrics, slaughtering and meat packing, and women's factory clothing. In seven other industries weekly earnings ranged from $14 to $15, in sixteen others they were from $13 to $14, while in the remaining ten they were below $12.

3. Analysis of Annual Earnings of Male Wage-earners

The ranking of the industries as regards annual earnings is in most cases different to that of the weekly earnings. As annual earnings are the resultant of two factors (a) weekly earnings and (b) the number of weeks worked during the year, marked differences appear in their ranking as compared with weekly earnings.

Average annual earnings of male wage-earners in all industries totalled $1,202 in 1940 as compared with $930 in 1934. In British Columbia they were $1,303, Ontario $1,268, Manitoba $1,179, Alberta $1,134, Quebec $1,112, Saskatchewan $1,066, Nova Scotia $1,040, New Brunswick $1,023, and Prince Edward Island $644.

Male wage-earners working in the iron and its products group received the highest annual earnings of $1,428. Non-ferrous metal products ranked second with $1,347, followed by non-metallic mineral products with $1,262, chemicals and allied products $1,240, wood and paper products $1,123, vegetable products $1,048, textiles and textile products $1,040, miscellaneous industries $1,015, and animal products $998.

The highest annual earnings of $1,788 were received by wage-earners employed in the Automobile industry. The shipbuilding industry with $1,591 came second, followed by primary iron and steel with $1,571, non-ferrous metal smelting and refining $1,520, printing and publishing $1,514, petroleum products $1,506, pulp and paper $1,492, railway rolling-stock $1,459, automobile supplies $1,444, aircraft $1,388, etc. For annual earnings in the forty leading industries, see Table 7.

4. Analysis of Annual Earnings of Female Wage-earners

Annual earnings of female wage-earners at $654 for manufacturing as a whole were only 54 per cent of male earnings. Ontario with $685, British Columbia $681 and Manitoba $660 were above the Dominion average, while Alberta with $638, Quebec $620, Saskatchewan $599, New Brunswick $580, Nova Scotia $569 and Prince Edward Island $325 were below it.

Female workers in the iron and its products group of industries received the highest annual earnings of $755. Non-ferrous metal products came second, followed by textiles and textile products, miscellaneous industries, chemicals and allied products, wood and paper products, non-metallic mineral products, animal products and vegetable products.

The fur goods industry occupied the dominant position in annual earnings, with an average of $842. Slaughtering and meat packing with $766 was in second place, followed by narrow fabrics with $746, woollen cloth $742, electrical apparatus and supplies $725, cotton yearn and cloth $723, automobile supplies $692, lithographing $691, hats and caps $687, woollen yarn $686, etc. Fruit and vegetable preparations with $460 had the lowest average annual earnings of the forty industries employing the greatest number of female wage-earners.

5. Analysis of Hourly Earnings of Male Wage-earners

The forms used in compiling the census of manufactures since 1938 requires firms to give separate information on hours worked by male and female wage-earners. Prior to this, information on hours worked covered all wage-earners, and were not broken down by sex. As a result of this breakdown it is now possible to estimate hourly earnings for males and females separately.

WEEKLY EARNINGS IN MANUFACTURING INDUSTRIES, 1940.

According to Table 6, hourly earnings of male wage-earners in all manufacturing industries amounted to 48.7 cents per hour, an increase of 8 cents or 19.6 per cent since 1934. Workers in the iron and its products group were paid an average of 59.1 cents per hour, while those employed in the vegetable products group received the lowest hourly earnings of 41.1 cents. Wage-earners in the iron, non-ferrous metals, non-metallic minerals and chemical groups were paid above the average for manufacturing in general while workers in the vegetable, animal, textile, wood and paper and miscellaneous industry groups were below the average.

In hourly earnings, the automobile industry ranked first with an average of 85.9 cents per hour, followed by petroleum products with 75.4 cents, railway rolling-stock 68.1 cents, printing and publishing 66.8 cents, automobile supplies 65.9 cents, women's factory clothing 65.0 cents, non-ferrous metal smelting and refining 60.6 cents, shipbuilding and repairs 60.0 cents, pulp and paper 56.2 cents, primary iron and steel 57.3 cents, etc. In only two industries, viz. automobiles and petroleum products did hourly earnings exceed 75 cents. In sixteen industries they ranged between 50 and 75 cents, in fourteen others they were between 40 and 50 cents, while in the remaining eight industries they were below 40 cents. Of the forty industries employing the greatest number of male wage-earners, sawmills with 31.7 cents per hour was the lowest. For details of average hourly earnings see Tables 5, 6, 7 and 8.

6. Analysis of Hourly Earnings of Female Wage-earners

Female wage-earners in 1940 were paid on an average 28.5 cents per hour in the manufacturing industries of Canada, an increase of 3.4 cents or 13.5 per cent as compared with 1934. Hourly earnings ranged between 31.3 cents in British Columbia and 16.0 cents in Prince Edward Island. In Ontario, Manitoba and British Columbia hourly earnings were above the Dominion average while in the other provinces they were below it.

Hourly earnings in the iron and its products group ranked first with 33.6 cents. Non-ferrous metal products with 30.2 cents ranked second, followed by textiles and textile products, animal products, miscellaneous industries, chemicals and allied products, non-metallic mineral products, wood and paper products, and vegetable products.

Fur goods was the leading industry in 1940 with 39.4 cents per hour, followed by automobile supplies with 37.7 cents, clothing contractors 36.6 cents, hats and caps 33.9 cents, slaughtering and meat packing 32.8 cents, women's factory clothing 32.5 cents, machinery 31.6 cents, tobacco processing and packing 31.5 cents, lithographing 30.9 cents, electrical apparatus and supplies 30.8 cents, etc. In only thirteen of the forty industries employing the greatest number of female wage-earners were hourly earnings above 30 cents. In twenty-four they ranged between 25 and 30 cents and in the remaining three they were below 25 cents. Fruit and vegetable preparations with 22.7 cents per hour was in this respect also the lowest paying industry.

7. Analysis of Hours Worked per Week by Male and Female Wage-earners

Male wage-earners in 1940 worked on an average 50.9 hours per week. Of these 20.1 per cent worked 44 hours or less, 36.2 per cent worked between 45 and 50 hours, 15.1 per cent worked between 51 and 55 hours and 28.6 per cent worked 56 hours or over. Female wage-earners worked shorter hours than males, averaging 47.3 hours per week in 1940. This is 3.6 hours less than the number of hours worked by male wage-earners. Of the female wage-earners employed 30.2 per cent worked 44 hours or less, 42.2 per cent worked between 45 and 50 hours, 16.0 per cent worked between 51 and 55 hours, and 11.6 per cent worked 56 hours or over.

Due to the changes in the method of collecting the statistics of the hours of work, it becomes difficult to measure the changes in the working week from year to year. For example, prior to 1938 no breakdown by sex was requested, and the hours worked were regular hours not including overtime. Since 1938 the weekly hours of work are broken down by sex and for 1940 they include overtime. Prior to the war the average working week for both male and female wage-earners was 48.3 hours. In 1940 the hours per week rose to 50.1, the increase no doubt being due to the overtime work necessary in war plants to meet the requirements of the armed forces.

14. Fertilizers	(2)	29.24	35.35	(2)	25.00	18.22
15. Breweries	(2)	27.57	31.78	-	-	-
All Industries	22.51	23.73	26.00	12.61	12.89	13.60

(1) Information not collected.

(2) Information not available. A survey of weekly earnings was made by the government of British Columbia for 1934. Few industries were, therefore, covered by the survey made by the Dominion Bureau of Statistics.

(3) Other leading industries, individual statistics for which cannot be given because there are fewer than three establishments in each, are: sugar refining, bridge and structural steel work, and non-ferrous metal smelting and refining.

WEEKLY EARNINGS IN MANUFACTURING INDUSTRIES, 1940.
