Foreword

The Canadian Chemical Register is a comprehensive reference source for chemicals that are manufactured in Canada. Published in collaboration with the Statistics and Information Committee of the Canadian Chemical Producer's Association, and with the co-operation of Canadian chemical manufacturers, the Register provides industry and governments with a periodic benchmark of Canadian chemical industry capability. This capability is expressed in terms of the number of chemical producers, the diversity of chemical substances and the locations of chemical manufacture.

The Register is published in two volumes, in both English and French. Volume I is an alphabetical listing of chemical manufacturers and the chemicals (elements or compounds listed by common, chemical or chemical class name) produced by each manufacturer. Volume II is an alphabetical listing of chemicals accompanied by the names of producers and manufacturing locations.

The chemical substances listed are understood to be manufactured in Canada by means that involve one or more chemical reaction steps and/or a chemical separation process (i.e., fractionation, solvent extraction, crystallization, etc.). Minerals, such as limestones and talc, that are subjected only to processes of comminution and classification have been excluded.

All chemicals listed are offered for merchant sale unless otherwise qualified under the "Status" heading to be an "intermediate" or a chemical produced for "captive" consumption. The term "reagent" denotes fine chemicals or chemicals of high purity produced in laboratory or relatively small quantities for food, diagnostic, pharmaceutical, electronic or similar uses.
