HANDBOOK OF FIELD CROP AREA, YIELD, PRODUCTION, AVERAGE FARM PRICE AND VALUE.

1953 - 1983

RECUEIL DE LA SUPERFICIE, RENDEMENT, PRODUCTION, PRIX MOYEN A LA FERME ET VALEUR DES GRANDES CULTURES.

January/Janvier 1985

Preface

This printout contains historical statistics on field crop area, average yield, production, average farm price and farm value for the years 1953 to 1983. Field crops are defined to include the principal Canadian grains and forages. Area, yield and production data in imperial have been converted to metric. The amount of rounding differs by crop and by province.

This dataset supersedes the Handbook of field crop statistics released in January 1983 which provided similar statistics for the years 1953 to 1983. Earlier editions presented estimates for the 1908-63 and the 1921-74 periods. The official time series extends back to 1908.

The variables require definition. The area data are seeded areas. However, the oats and barley areas in the Prairie Provinces are harvested areas since 1956 for oats, and since 1973 for barley. Average yields are per seeded area, with the exceptions of oats and barley for the years noted, and yields are reported on a field run basis. The production figures thus include dockage which varies between crops and years. Average farm prices are the average prices received by all farmers for all grades and qualities of each crop.

The statistics are based largely on data generated from Statistics Canada's farm surveys. Provincial agriculture statisticians, the Canadian Grain Commission plus numerous other government and private organizations provide valuable information that is used in refining the survey estimates.

Statistics Canada's current forecasts and estimates are published in the Field Crop Reporting Series (Cat. No. 22-002). This Series consists of eight statistical reports released throughout the year covering planting intentions, seeded areas, grain stocks, production forecasts and estimates plus area and production breakdowns for major crops seeded on stubble and summerfallow land. Also available on request are crop district area, yield and production data for the three Prairie Provinces.

Information describing the crops estimation process is provided in "Field Crop Statistics: Data Sources and Estimating Procedures", a non-catalogue publication of Statistics Canada. Further questions concerning methods used in making crop estimates or any other aspect of the Crop Reporting Program may be directed to the Crops Section, Agriculture Statistics Division, Statistics Canada at Tunney's Pasture, Ottawa, K1A OT6 (telephone (613) 990-8717) or to 266 Graham Avenue, Winnipeg, Manitoba, R3C OK4 (telephone (204) 949-2856).

The data in this printout were retrieved from CANSIM, Statistics Canada's computerized data base. All data appearing here are available via terminal, on computer printouts or in machine readable form. Other crop data on grain stocks and dates of spring wheat development are available on CANSIM. The data shown here are identified by CANSIM matrix number in the Table of Contents. Further inquiries about agricultural data on CANSIM should be either addressed to the Data Dissemination Unit, Agriculture Statistics Division, Tunney's Pasture, Ottawa K1A OT6 or telephone (613) 990-8709.

Preface

Le present imprime renferme des statistiques chronologiques sur la superficie, le rendement moyen, la production, le prix moyen a la ferme et la valeur a la ferme des grandes cultures pour les annees 1953 a 1983. Les grandes cultures se definissent comme les principaux grains et cultures fourrageres du Canada. Les donnees sur la superficie, le rendement et la production exprimees en unites imperiales ont ete converties en unites metriques. L'arrondissement varie selon la culture et la province.

Cet ensemble de donnees remplace le Recueil de statistiques sur les grandes cultures paru en janvier 1983 ou figuraient des statistiques semblables pour les annees 1953 a 1983. Les premieres editions presentaient des estimations pour les periodes 1908-1963 et 1921-1974. Les series chronologiques officielles remontent a 1908.

Les variables doivent etre definies. Les donnees sur les superficies portent sur les superficies ensemencees. Cependant, les superficies ensemencees en avoine et en orge dans les provinces des Prairies sont les superficies moissonnees depuis 1956 en ce qui concerne l'avoine et, depuis 1973, pour ce que est de l'orge. Les rendements moyens sont exprimes en fonction de la superficie ensemencee, sauf en ce qui concerne l'avoine et l'orge pour les annees indiquees, et ils sont declares d'apres la recolte brute. Les chiffres sur la production englobent donc les dechets, qui varient d'une recolte et d'une annee a l'autre. Les prix moyens a la ferme sont les prix moyens que recoivent les agriculteurs pour toutes les categories et qualites de chaque culture.

Les statistiques sont fondees en grande partie sur les donnees produites grace aux enquetes agricoles de Statistique Canada. Les statisticiens agricoles des provinces, la Commission canadienne des grains et de nombreux autres organismes gouvernementaux et prives fournissent des renseignements utiles qui servent a ameliorer les estimations des enquetes.

Les previsions et estimations courantes de Statistique Canada paraissent dans la Serie de rapports sur les grandes cultures (no 22-002 au cat.). Cette serie consiste de huit rapports statistiques qui paraissent au cours de l'annee sur les projets d'ensemencement, les superficies ensemencees, les stocks de grains, les previsions et les estimations de la production et la ventilation de la superficie et de la production des principales cultures ensemencees sur jachere et sur chaume. Aussi disponible sur demande sont les donnees sur la superficie le rendement et la production par district agricole pour les trois provinces des prairies.

Les donnees sur l'estimation des cultures paraissent dans la publication Statistiques des grandes cultures: sources de donnees et methodes d'estimation, publication ne figurant pas au catalogue de Statistique Canada. Les questions concernant les methodes utilisees pour l'etablissement des estimations des cultures ou tout autre aspect du programme des rapports sur les cultures peuvent etre adressees a la Section des cultures, Division de la statistique agricole, Statistique Canada, Parc Tunney, Ottawa, K1A 0T6 (no de tel. 613-990-8717) ou au 266, Graham Avenue, Winnipeg (Manitoba), R3C 0K4 (no de tel. 204-949-2856).

Les donnees du present imprime proviennent du CANSIM, base de donnees electronique de Statistique Canada. Il est possible d'obtenir toutes les donnees figurant ici au moyen d'un terminal, d'imprimes d'ordinateur ou sous forme lisible par machine. D'autres donnees sur les stocks de grains et les dates de croissance du ble de printemps figurent dans CANSIM. Les donnees presentees ici sont identifiees par un numero de matrice CANSIM dans la table des matieres. Pour plus de renseignements sur les donnees agricoles du CANSIM, il faut s'adresser a la Sous-section de la diffusion des donnees, Division de la statistique agricole, Parc Tunney, Ottawa, K1A 0T6 ou telephoner au no (613) 990-8709.
