Ordering and subscription information

This product, Catalogue no. 23-603-XIE, is published quarterly in electronic format on the Statistics Canada Internet site at a price of CDN \$34.00 per issue and CDN \$112.00 for a one-year subscription. To obtain single issues or to subscribe visit our Web site at www.statcan.ca, and select Products and Services.

This product is also available in print through a Print-on-Demand service, at a price of CDN \$55.00 per issue and CDN \$196.00 for a one-year subscription. The following additional shipping charges apply for delivery outside Canada:

	Single issue	Annual subscription
United States	CDN \$ 6.00	CDN \$24.00
Other countries	CDN \$ 10.00	CDN \$40.00

All prices exclude sales taxes.

The printed version can be ordered by

- Phone (Canada and United States) **1 800 267-6677**
- Fax (Canada and United States) **1 877 287-4369**
- E-mail **order@statcan.ca**

Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and good will.

SYMBOL

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period

Livestock Statistics – Concepts and Methods

Concepts

Inventory levels of the various types of livestock intended for sale in Canada are measured at specific times throughout the year. Surveyed operations are requested to include all animals located on the farming operation, regardless of ownership. They are also asked to include animals owned but pastured on a community pasture, grazing co-op or public land. Producers are asked to exclude animals owned but kept on a farm, ranch or feedlot operated by someone else. Inventory levels are estimated for cattle, calves, pigs, sheep and lambs. Estimates are also produced for certain categories of animals on the basis of age, sex, weight and/or purpose i.e. breeding or slaughter.

Current information on livestock inventories and related statistics such as supply and disposition enable those active in the agricultural sector to observe and assess changes in the industry, measure performance and keep the agricultural community and general public informed of developments. The primary data users are federal and provincial governments, producer boards, farmers and farm organisations, private business, academic research institutions and students. Livestock data assists governments in formulating agricultural policies and developing programs. Farming organisations use statistics in developing recommendations for producers and government. Farmers make increasing use of prices, production, and marketing statistics in planning their operations. In addition, these livestock statistics are used in the calculation of farm incomes and in the Canadian System of National Accounts for indicators such as gross domestic product.

Methods

To produce livestock estimates, there are actually 6 different survey occasions. All of the survey occasions collect data primarily using Computer Assisted Telephone Interviews (CATI) although there are special procedures in place for the very large or complex operations.

Two of the occasions are the January Livestock Survey and the July Livestock Survey. These are large-scale general livestock surveys collecting data on cattle, hogs, sheep and other livestock, referring to inventories at the 1st of the month. The probability samples include about 10,000 operations at January 1, and about 28,000 operations at July 1. These surveys collect data during a three-week period in the western provinces, Ontario and Quebec. Regardless of when operators respond, they are asked to report inventories as of January 1 or July 1. The livestock survey results are released, following processing and analysis, approximately seven weeks after the reference date.

Hog inventories are the focus of two other survey occasions collecting estimates of pig numbers at April 1 and October 1. This survey was initiated in 1998 as estimates from 1978 to 1997 were based solely on analytical tools. For the hog surveys, a sub-sample of the prior livestock survey is used. The probability samples are 1,500 at April 1 and 2,500 at October 1 and, similar to the livestock surveys, these CATI surveys cover the western provinces, Ontario and Quebec. Producers are requested to report their inventories as of the reference date, although the data are collected during a 7-day period near or before that date. The hog survey results are normally released three to four weeks after the reference date.

The June and November Atlantic Surveys are used to produce estimates for that region. These surveys are multi-purpose collecting data, primarily inventories, on livestock including cattle, hogs and sheep in addition to collecting data related to the area, yield and production of the principal field crops. The probability samples are 1,300 in June and 2,200 in November with the data collected by telephone. The results are released at the same time as the livestock results. For reference points where surveys do not exist for the Atlantic region, analytical tools are used to produce the estimates.

Recently a new piece of information has been added to the cattle statistics allowing users a better understanding of the cattle industry. In essence, the total inventories are distributed, on the basis of survey results and sector level balance sheets, to a specific farm type. The two major categories are dairy and beef. The beef sector is then broken down to beef cattle on cow/calf and mixed beef and dairy operations; beef cattle on feeder, stocker/finish operations; and, beef cattle on feeding operations, which includes feedlots.

To summarise, the livestock statistics are survey-based estimates. The survey relies on a list frame that is established every five years by the Census of Agriculture and updated to include new entrants, particularly large hog operations. The probability sample surveys are conducted by telephone. The survey results are analysed and corrected before the data are used to analyse the industry and fine-tune the estimates. The survey data are reviewed in a board environment before the commodity analyst works with the data primarily using supply-disposition analysis. The results of the industry analysis are reviewed by the board before being sent to the individual provinces. Once the data are finalised they are released to the public and published. The principal data released include inventories and summarised supply-disposition tables. The data also flow, via farm income estimates, to the Canadian System of National Accounts. In addition the data are used in the calculation of net farm income projections, produced by Agriculture and Agri-Food Canada in co-operation with Statistics Canada and the provinces.

Hogs inventories

Third quarter 2002

Slowdown in growth

Growth in Canadian hog inventories continued to slow in the third quarter of 2002. Declines in hog prices and the increased cost of feed contributed to the slowdown. As well, a two-year moratorium on hog barn construction in Quebec, the leading producer in Canada, limited the expansion.

Canadian hog producers reported 14.7 million head on farms at October 1, 2002, an increase of 2.3% over the previous year. October 2001 and 2000 experienced a growth of 6.0% and 5.4% respectively. Average growth over the past five years has been 5.0%.

Hog inventories at October 1, 2002								
'000 head	Breeding		Market Hogs				Total hogs

West	690	4.8	1,899	3.0	3,747	4.6	6,336	4.1

Note: Figures may not add up to totals due to rounding.

The American hog and pork markets affect the Canadian hog industry. The sharp decline in the American price since the start of the year has triggered a drop in the slaughter price on the Canadian market. Falling prices in the United States reflect a slowdown in the disposition of pork supplies and a higher slaughter volume. Canadian average hog prices in the third quarter of 2002 were about 28% lower than during the same period last year.

In Canada, the number of hogs slaughtered in the third quarter of 2002 was 5.5 million, up 7.8% from 2001. During the first nine months of 2002, the national slaughter reached a record level of 16.3 million hogs, or 6.6% higher than for the same period last year.

Exports of live hogs to the United States rose by 5.3% over the third quarter of 2001. For year 2001, exports soared by 23% over the previous year.

Farrowings (number of sows that gave birth during the period) rose by 3.5% in the third quarter of 2002 over the same quarter in 2001. Nevertheless, this growth is much weaker than that observed in the same period last year, which recorded an increase of 9.6%. The smaller third quarter increase in farrowings along with lower intentions at 2.4%, for the fourth quarter, indicate that the growth slowdown will continue.
