ACKNOWLEDGEMENTS

The Department of Human Resources and Skills Development (HRSD) wishes to express sincere appreciation for the contribution of the many industrial establishments, professional associations, labour organizations, trades persons, provincial and territorial government departments and agencies, and all others who contributed to this publication.

Special acknowledgement is extended to Mike Chapman, who developed the analysis with the assistance of Carol Chapman and Christopher Maddocks, and the following representatives from the tilesetting industry:

Salvatore Adipietro Quebec

Darrell Butler Newfoundland and Labrador

Murray Clark Nova Scotia Steven Haggerty New Brunswick

Francesco (Frank) Perri Bricklayers and Allied Craft union (BAC)

Don Proude Prince Edward Island

Gerald Reinders BAC
Chris Ross Ontario
Paul Salter Alberta

Tom Tubello Saskatchewan Guy Zecchini British Columbia

This analysis was prepared by the Human Resources Partnerships Directorate of HRSD. The overall planning and coordination of the development of this analysis was undertaken by staff members of HRSD's Policy and Apprenticeship Division.

FOREWORD

The first National Conference on Apprenticeship in Trades and Industries, held in Ottawa in 1952, recommended that the federal government be requested to co-operate with provincial apprenticeship committees and officials in preparing analyses of a number of skilled occupations. To this end, Department of Human Resources and Skills Development sponsors a program, under the guidance of the Canadian Council of Directors of Apprenticeship (CCDA), to develop a series of occupational analyses.

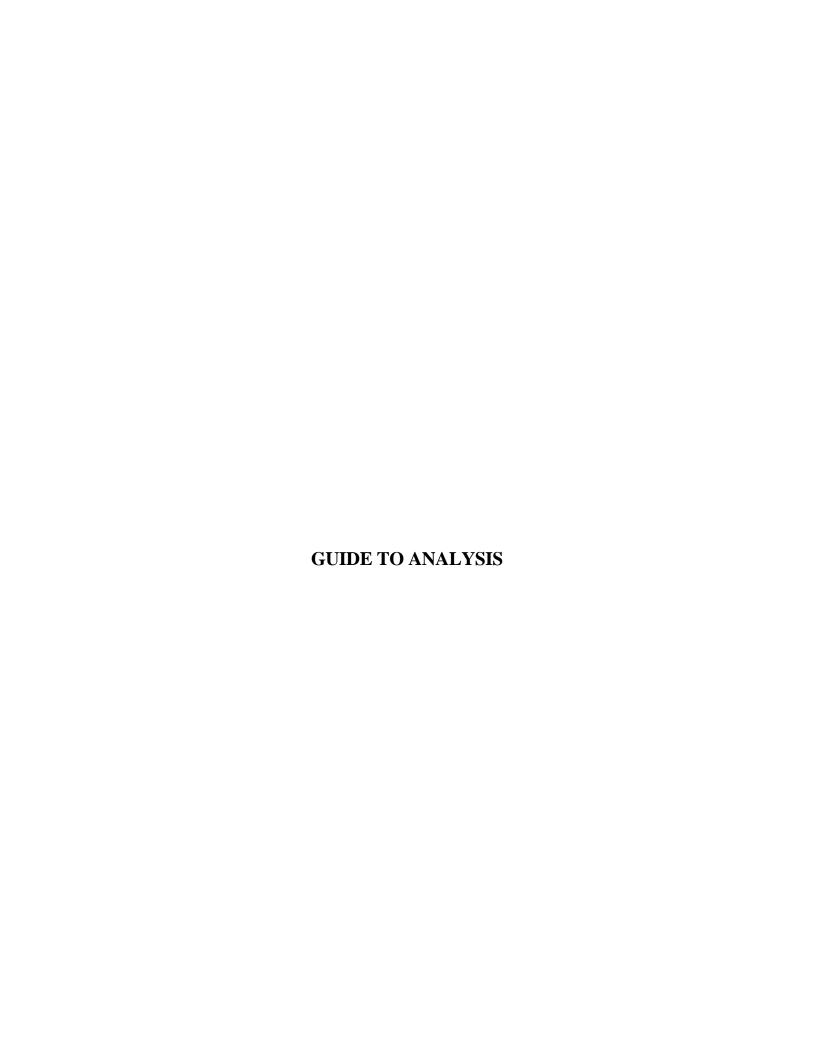

The Occupational Analysis Program has the following objectives:

- to identify and group the tasks performed by skilled workers in particular occupations;
- to identify those tasks that are performed by skilled workers in every province and territory;
- to develop instruments for use in the preparation of interprovincial standards "Red Seal" examinations and curricula for training leading to the certification of skilled workers;
- to facilitate the mobility, in Canada, of trainees and skilled workers;
- to supply employers and employees, and their associations, industries, training institutions and governments with analyses of the tasks performed in particular occupations.

DEVELOPMENT OF ANALYSIS

A draft analysis is developed by a knowledgeable consultant who, with the assistance of a committee of industry experts in the field, identifies all the tasks performed in the occupation.

The draft is then assigned to occupational analysts at the Department of Human Resourcesand Skills Development for translation and then returned to the consultant for review to ensure conformity with the nationally approved format.

The consultant will then forward a copy of this analysis to provincial/territorial authorities for validation by specialists in the field. Their recommendations are assessed and incorporated into the final draft which also includes the identification of the common core tasks performed in the occupation.

The occupational analysis is published in both official languages.

STRUCTURE OF ANALYSIS

To facilitate understanding of the nature of the occupation, the work performed is divided into the following divisions:

- A. **BLOCK** is the largest division within the analysis and reflects a distinct operation relevant to the occupation.
- B. **TASK** is the distinct activity that, combined with others, makes up the logical and necessary steps the worker is required to perform to complete a specific assignment within a "BLOCK".
- C. **SUB-TASK** is the smallest division into which it is practical to subdivide any work activity and, combined with others, fully describes all duties constituting a "TASK".

Supporting Knowledge & Abilities

The elements of skill and knowledge that an individual must acquire to adequately perform the task are identified under this heading.

Trends

Any shifts or changes in technology that affect the block are identified under this heading.

Related Components

All components of a specified task being undertaken by the tilesetter are identified under this heading.

Tools and Equipment

All tools and equipment necessary for the tilesetter to complete a task are identified under this heading.

VALIDATION METHOD

At the request of the Canadian Council of Directors of Apprenticeship (CCDA), the Standardization Sub-committee developed a method for validating the Red Seal national occupational analyses.

A draft of the analysis is sent to all provinces/territories for validation. Each jurisdiction rates the sub-tasks and applies percentage ratings to blocks and tasks. This method for the validation of the national occupational analysis identifies common core tasks across Canada for a specific occupation. This feature facilitates the weighting of the Interprovincial Red Seal examinations.

DEFINITIONS

YES: the sub-task is performed by workers in the occupation in a specific

jurisdiction.

NO: the sub-task is not performed by workers in the occupation in a specific

jurisdiction.

BLOCK %: the average number of questions (items), derived from the collective decision

made by workers within the occupation from all areas of Canada, that will be placed on an interprovincial examination to assess each block of the analysis.

TASK %: the average number of questions (items), derived from the collective decision

made by workers within the occupation from all areas of Canada, that will be placed on an interprovincial examination to assess each task of the analysis.

NV: Not Validated by a province/territory.

ND: <u>Not Designated in a province/territory.</u>

PROVINCIAL/TERRITORIAL ABBREVIATIONS

NL: Newfoundland and Labrador

NS: Nova Scotia

PE: Prince Edward Island NB: New Brunswick

QC: Quebec
ON: Ontario
MB: Manitoba
SK: Saskatchewan

AB: Alberta

BC: British Columbia
NT: Northwest Territories

YK: Yukon NU: Nunavut

COMMON CORE

The criteria for determining common core depend on the performance of sub-tasks. If 70% of the responding jurisdictions (excluding NVs and NDs) perform a sub-task, it shall be considered common core.

Interprovincial Red Seal examinations are based on the common core identified through this validation process. This process identifies what will be assessed through the interprovincial examination.

BLOCKS AND TASKS WEIGHTING (APPENDIX "C")

This appendix represents the block and task percentages as submitted by each jurisdiction.

Each jurisdiction, with the use of a provincial/territorial occupational advisory committee, validates the content, places percentages on blocks and tasks, and indicates whether or not the sub-tasks are performed by the skilled workers within the occupation. The results of this exercise are submitted to the consultant who then analyzes the data and develops this appendix which provides the individual jurisdictional validation results as well as the national averages of all responses.

PIE CHART (APPENDIX "D")

The graph depicts the national percentages assigned to blocks in the analysis.

SCOPE OF THE TILESETTER OCCUPATION

The title "tilesetter" defines a person who, because of his or her knowledge, training, and abilities, is capable of covering, repairing, and decorating exterior and interior walls, floors, swimming pools, saunas, and other surfaces using ceramic, mosaics, marble and quarry tile, slate, stone or granite slabs, or terrazzo.

Tilesetters read and interpret architectural drawings and material specifications to determine tile layout, finish, and installation requirements. They prepare surfaces for tiling by applying a variety of underbeds such as metal mesh, anchor bolts, cement beds, or scratch coats. They select, mix, apply, and spread mortar, cement, mastic, or other adhesives to the tile to be set or the surface to be tiled. They cut and fit tiles to a variety of surfaces, and finish tiles using grout. Tilesetters also lay and set mosaic tiles to create decorative wall, mural, and floor designs. Some tilesetters cut, polish, and install marble and granite and mix, lay, grind, and polish terrazzo surfaces.

Because tilesetting is a final step in the construction process, tilesetters generally work indoors in relatively comfortable conditions. However, some of the work is exterior and is therefore exposed to inclement weather. The work requires considerable bending, crawling, kneeling, and reaching. Installing some material may also involve heavy lifting. Hazards include exposure to dust, silica, epoxy fumes, and repetitive stress injury.

Tilesetters are required to have a good sense of layout and design, and often prearrange tiles on a dry floor to confirm a specific design. Tilesetting requires considerable planning, and tilesetters must be able to visualise the finished design as they work with the small components at close quarters. Tilesetters must be familiar with the material properties and installation requirements of ceramic, mosaic, marble, quarry tile, stone, and terrazzo. All tilesetters are required to be competent in the use of a variety of specialty hand and power saws, tile cutters, and grinding and polishing machines.

Some tilesetters may be employed by tile contractors, while others are self-employed. On small jobs, tilesetters may work alone with minimal supervision. They may also supervise an apprentice or helper. On large jobs, they may work under the direction of a supervisor.

Tilesetters interact and work co-operatively with the full spectrum of construction tradespeople, such as carpenters, bricklayers, painters, lathers, cabinetmakers, plumbers, and heating, ventilation and air-conditioning technicians. They are required to constantly adjust their schedule and work to accommodate the schedule of these other trades since their role is one of final finishing.

OCCUPATIONAL OBSERVATIONS

Like many construction occupations, the tilesetter occupation is suffering from an ageing workforce. Many practitioners are approaching retirement age, and the trade is attracting fewer entrants to replace them. Many contractors report serious shortages when trying to obtain qualified practitioners.

Training and retraining is becoming an issue within the occupation. Pre-apprentice training is rare in Canadian community colleges, and many entrants to the field do not register as apprentices.

Along with all construction trades there is a greater emphasis on safe working conditions and practices. Tilesetters are now more aware of the hazards of the material with which they work.

Unlike the majority of construction trades, the tilesetter trade has not experienced a significant impact from advances in technology. While the products used continue to be improved, the work itself is still dependant on the manual skills and the artistic flair of the practitioner.

SAFETY

Safe working procedures and conditions, accident prevention, and the preservation of health are of primary importance to industry in Canada. These responsibilities are shared and require the joint efforts of government, employers, and employees. It is imperative that all parties become aware of circumstances that may lead to injury or harm. Safe learning experiences and environments can be created by controlling the variables and behaviours that may contribute to accidents or injury.

It is generally recognized that safety-conscious attitudes and work practices contribute to a healthy, safe, and accident-free working environment.

It is imperative to apply and be familiar with the Occupational Health and Safety Act and Regulations. As well, it's essential to determine workplace hazards and take measures to protect oneself, co-workers, the public, and the environment.

As safety education is an integral part of training in all jurisdictions, personal safety practices are not recorded in this document. However, the technical safety aspects relating to each task and sub-task are included throughout this analysis.

BLOCK A

OCCUPATIONAL SKILLS

Trends:

Constant introduction of new power tools (e.g. optical tools, and tools for cutting, mixing, and grouting) is enabling greater automation within the occupation. The use of wireless communication technology along with personal digital organizers is on the increase in the occupation. There is also a greater awareness of safe working conditions, and the handling, use and disposal of hazardous material.

Task 1 Interprets occupational documentation.

Related Components: Drawings, codes, specifications.

MATERIAL SETTING

Trends:

New compound/polymer technology is being introduced into the trade on an ongoing basis. Tiles are increasing in size, as are the tools for handling and placing them. Advancements in anchoring technology are being introduced into the occupation.

Task 15 Installs tiles.

Related Components: Tiles: ceramic, porcelain, quarry, terra cotta, paver, glass mosaic,

mosaic, slate, marble, agglomerate, terrazzo, granite, quartzite,

limestone.

Tools and Equipment: Common tools, measuring and levelling equipment, power tools.

GLOSSARY

accessories ceramic fixtures such as towel bars, paper and soap holders, etc.

bond coat material used between the back of the tile and the prepared surface

Cementitious a nailable, screwable backerboard or underlayment panel composed of

Backer Unit (CBU) Portland cement, aggregates and reinforcement

divider strips zinc, brass or plastic strips used to control expansion or contraction of the

underbed and topping, or to divide different colour panels or patterns

epoxy a two-component synthetic thermosetting resinous material

mortar bed mixture of cement and sand placed over rough floor to provide a level base

for finishing material

MSDS Material Safety Data Sheets

OHSA Occupational Health and Safety Act

stone slabs any natural occurring architectural material such as marble, slate, limestone,

granite, quarry tiles or quartzite

substrate the underlying surface such as concrete, wood, concrete board, upon which

finishing material is placed

terrazzo a form of mosaic flooring made by embedding pieces of aggregate chips in

matrix

Task 18 Finishes installed product.

Task 19 Finishes terrazzo.

PIE CHART* Tilesetter

TITLES OF BLOCKS

Block A	Occupational Skills	Block D	Material Preparation
Block B	Substrate Preparation	Block E	Material Setting
Block C	Layouts	Block F	Finishing

^{*} The average percentage of the total number of questions on an interprovincial examination, assigned to assess each block of the analysis, as derived from the collective input from workers within the occupation from all areas of Canada. Interprovincial examinations typically have from one hundred up to one hundred and fifty multiple-choice questions on each examination.
