CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fourth Quarter 2010

New Home Market

Year-to-date housing starts up 39 per cent from 2009

So far this year, local builders across the Regina Census Metropolitan Area (CMA) have responded to an improving economy and heightened demand for housing by ramping up the pace of production. With a 37 per cent year-over-year gain, third

quarter housing starts outpaced last year's corresponding output. To the end of September, area builders began construction on 921 housing units, up 39 per cent from the 663 units that were initiated during the first nine months of 2009.

Single-detached starts posted a 53 per cent year-over-year gain in the third quarter, reaching 194 units. During the first three quarters of

Source: CMHC

2010, builders poured foundations for 531 single-detached units, a 29 per cent advance from the same period last year when area builders broke ground on 411 singles. Despite these gains, the largest year-over-year improvements were observed within the multi-family housing segment, which include semi-detached, row, and apartment units. Accordingly, the 390 multi-family units that were started through September represent a 55 per cent improvement from the corresponding period last year when 252 units were initiated. Third-quarter multi-family production was 25 per cent higher than the previous year.

To the end of September, sizable gains were observed within the semi-detached housing category, with builders initiating construction on 78 units, up from the eight units tallied during the corresponding period last year. With 230 units, apartments account for 59 per cent

of all multi-family units initiated during the first nine months of 2010. This represented a 22 per cent advance from the first three quarters of 2009 when 188 apartment starts were recorded. Meanwhile, 82 row units began construction through September, up 46 per cent from the 56 units that broke ground during the same

period in 2009. Through September, multi-family starts garnered 42 per cent of total new home production across the region, up from 38 per cent during the first three quarters of 2009.

Supply remains elevated in Regina's multi-family market

With an inventory of 121 completed and unabsorbed homes and 1,273 units under construction in September, total new home supply in Regina remains elevated by historical standards. The heightened supply level is in large part due to the multi-family market, as the supply of multi-family units in September was 15 per cent higher than the previous year. Given the heightened pace of starts this year, the number of multi-family units under construction advanced nine per cent, climbing from 630 units in September 2009 to 687 units in September of the current year.

Figure 3

Source: CMHC

Similarly, at 86 units, the inventory of complete and unabsorbed multi-family units advanced by more than two-fold from the corresponding period in the prior year.

Meanwhile, after peaking at 963 units in November 2008, the supply of single-detached units in September was considerably lower following 16 consecutive months of year-over-year reductions. Accordingly, with 586 units under construction and an additional 35 units completed and unabsorbed, the total supply of single-detached units declined 11 per cent, going from 696 units in September 2009, to 621 in the ninth month of the current year.

Multi-family absorptions up through September

At 832 units to the end of September, total absorptions this year were slightly higher than the 820 units absorbed through September 2009. Of these, 571 new single-detached homes were absorbed, down 14 per cent year-over-year. Notwithstanding last year's decline in starts, single-detached completions have been relatively strong in 2010, with the majority of units thus far being absorbed upon completion. Meanwhile, the 261 new multi-family units that were absorbed through September represent a 68 per cent increase from the pace set in 2009.

To the end of September, the absorbed price of new single-detached homes in Regina averaged \$434,418, up 15 per cent from

the same period last year. In large part, the gains reflected a shift in the sales distribution toward the upper price ranges. To the end of September 2010, 35 per cent of single-detached absorptions occurred above \$450,000, far beyond last year's share of 19 per cent. Despite the strong gain in average absorbed price, current price pressures in Regina's new home market are considerably lower due to last year's reduction in starts. Accordingly, less pressure has been exerted on construction costs and eight months into the year, the New House Price Index (NHPI) advanced 4.8 per cent year-over-year, compared with a 7.6 per cent gain during the first eight months of 2009.

Resale Market

Sales of existing homes moderate

Residential MLS® sales in Regina continued to moderate in the third quarter as recent price growth has tempered demand for resale housing. From July to September, Regina had a total of 974 resale transactions, down 16 per cent from the 1,156 sales recorded during the same period in 2009. With 2,864 transactions completed after nine months, sales were three per cent below 2009 levels. The downward trend in sales seen since November 2009 has continued over the third quarter.

There were a total of 1,565 new listings in the third quarter, up one per cent from the previous year.

These brought new listings to 5,219 homes through September, virtually on pace with the 5,201 listings recorded last year. New listings on a trended basis have remained relatively stable in the last couple of months. Meanwhile, active listings expanded nine per cent year-over-year to 1,490 homes in September.

In the third quarter of the year, the sales-to-active listings ratio (SALR) averaged 22 per cent compared with 28 per cent one year earlier. From September 2009 to September 2010, the seasonally adjusted SALR has trended downwards, declining from 28 to 21 per cent. In September 2010, given the recent pace of sales and the number of active listings, there was five months of supply, up from four months a year prior.

Through September, the average resale price in Regina was ahead of 2009 levels. After nine months, the average price advanced 5.7 per cent year-over-year to \$257,850. This increase is on par with the six per cent price gain experienced over the same period in 2009, but down from the double-digit price growth seen at the start of the current year.

Economy

Employment levels improve

The global economic recovery, in particular the increase in commodity prices, continues to bolster economic activity across Regina in 2010. The economy continued to generate jobs in the third quarter, with year-to-date

Figure 4

Source: Statistics Canada Regina, SA Employment, All Ages (15+), Total, Both sexes

average employment advancing 1.9 per cent over the previous year. This expansion represents an additional 2,800 workers of which the majority were full-time positions. A significant portion of this growth follows from the increased labour force participation rates observed thus far. Accordingly, at 74.2 per cent in September,

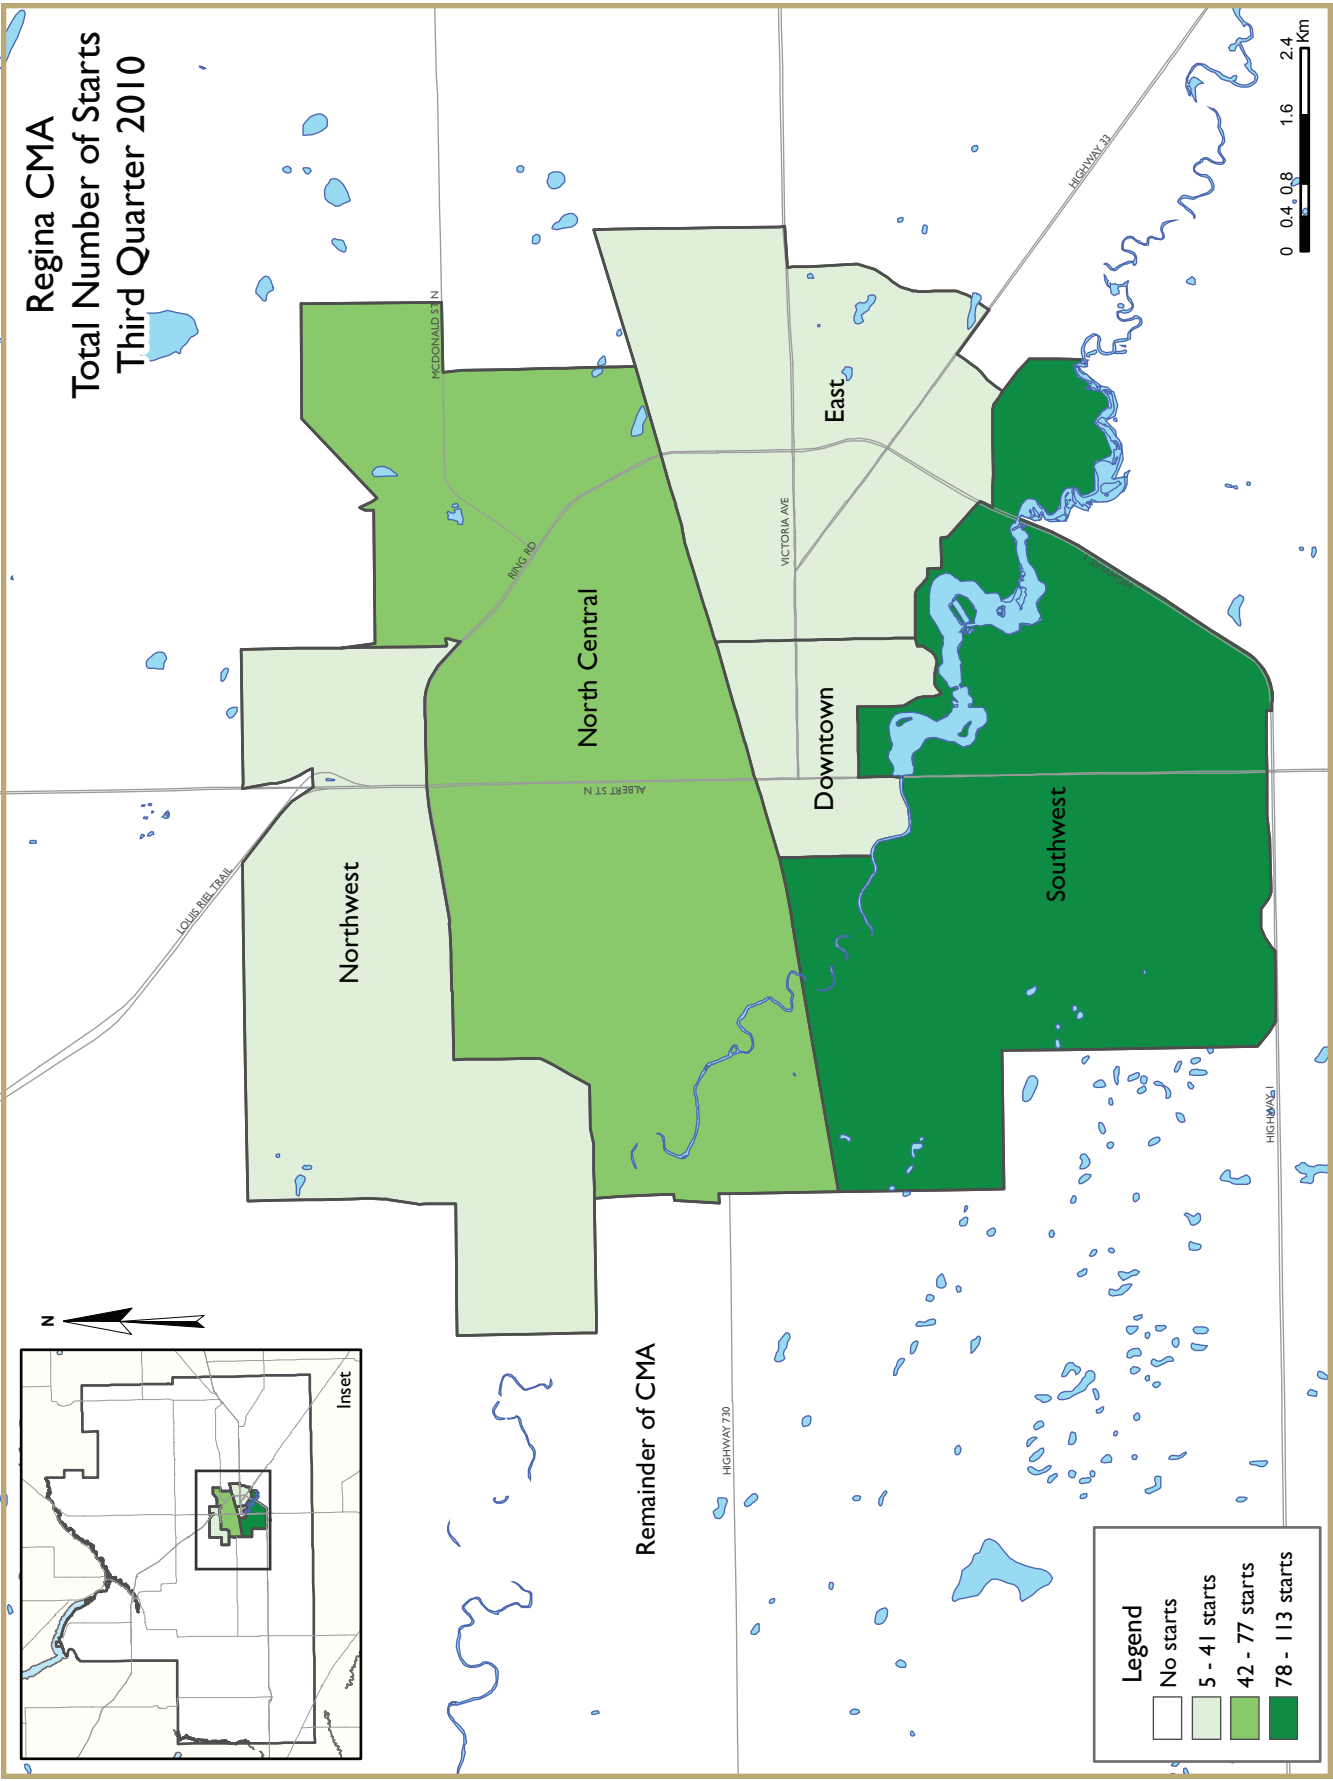

Regina's participation rate was the highest on record. Despite strong additions to the labour force, the growth in employment has helped bring the unemployment rate down to 4.8 per cent in September 2010 from 4.9 per cent a year earlier. This all translates into a very active labour market which continues to yield wage increases. Accordingly,

after nine months, average weekly earnings in all industries were up 3.4 per cent year-over-year, reaching \$851 per week.

Saskatchewan continued to attract elevated numbers of migrants into the province as total net migration to the end of June 2010 outpaced last year's heightened pace of migration by 16 per cent. International arrivals again accounted for the majority of migrants into Saskatchewan at 60 per cent of the total. Meanwhile, a 13 per cent year-over-year increase in the net number of international migrants was recorded to the end of the second quarter, while the largest gains were observed among inter-provincial migrants where an almost two and a half fold increase in net-migration was recorded. Inter-provincial migration accounted for 37 per cent of all arrivals into Saskatchewan through June.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
