CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: November 2010

New Home Market

Winnipeg housing starts moderate in October

Home builders in the Winnipeg Census Metropolitan Area (CMA) began construction on 154 units in October 2010, down from 213 in October 2009. A decline in multi-family starts was primarily responsible for the lower numbers. To the end of October 2010, total starts for the

year reached 2,758 units, a substantial improvement over the 1,717 units started during the first 10 months of 2009.

The Winnipeg CMA recorded 150 single-detached starts in October compared to 154 in October 2009, a three per cent decrease over the previous year. While demand for single-detached homes remains strong in the Winnipeg market, this is the first month since January where a year-over-year decline has been

registered. Through the first 10 months of the year, single-detached starts reached 1,629 units, 35 per cent more than were started over the same period one year earlier and only slightly off pace from the 1,645 started in the first 10 months of 2008. Of the municipalities comprising the CMA, the largest gains thus far have occurred in Ritchot and MacDonald, up 180 and 108 per cent respectively. Within Winnipeg city limits, where starts represent 79 per cent of CMA activity to-date, year-over-year singles were up 38 per cent.

Across the CMA, single-detached completions in October numbered 142 units, down 39 per cent from the 232 units completed in October of last year. In the same year-over-year comparison, there was also a corresponding decrease of 30 per cent in the number of absorptions of single-detached homes. The inventory of completed and unoccupied single-detached homes stood at 190 units in October, representing an eight per cent decrease from October 2009 and slightly below the five year average inventory of around 200 units.

The average price of a new single-detached home absorbed in October in the Winnipeg CMA was \$401,279, up 5.2 per cent from the average value reported in October 2009. The year-to-date average price was \$373,476, up 1.4 per cent from one year ago. Year-to-date growth in average price has been moderated by a slight increase in the market share of lower price units. In the first 10 months of the year, units priced below \$375,000 commanded a market share of 68 per cent, compared to 64 per cent in 2009.

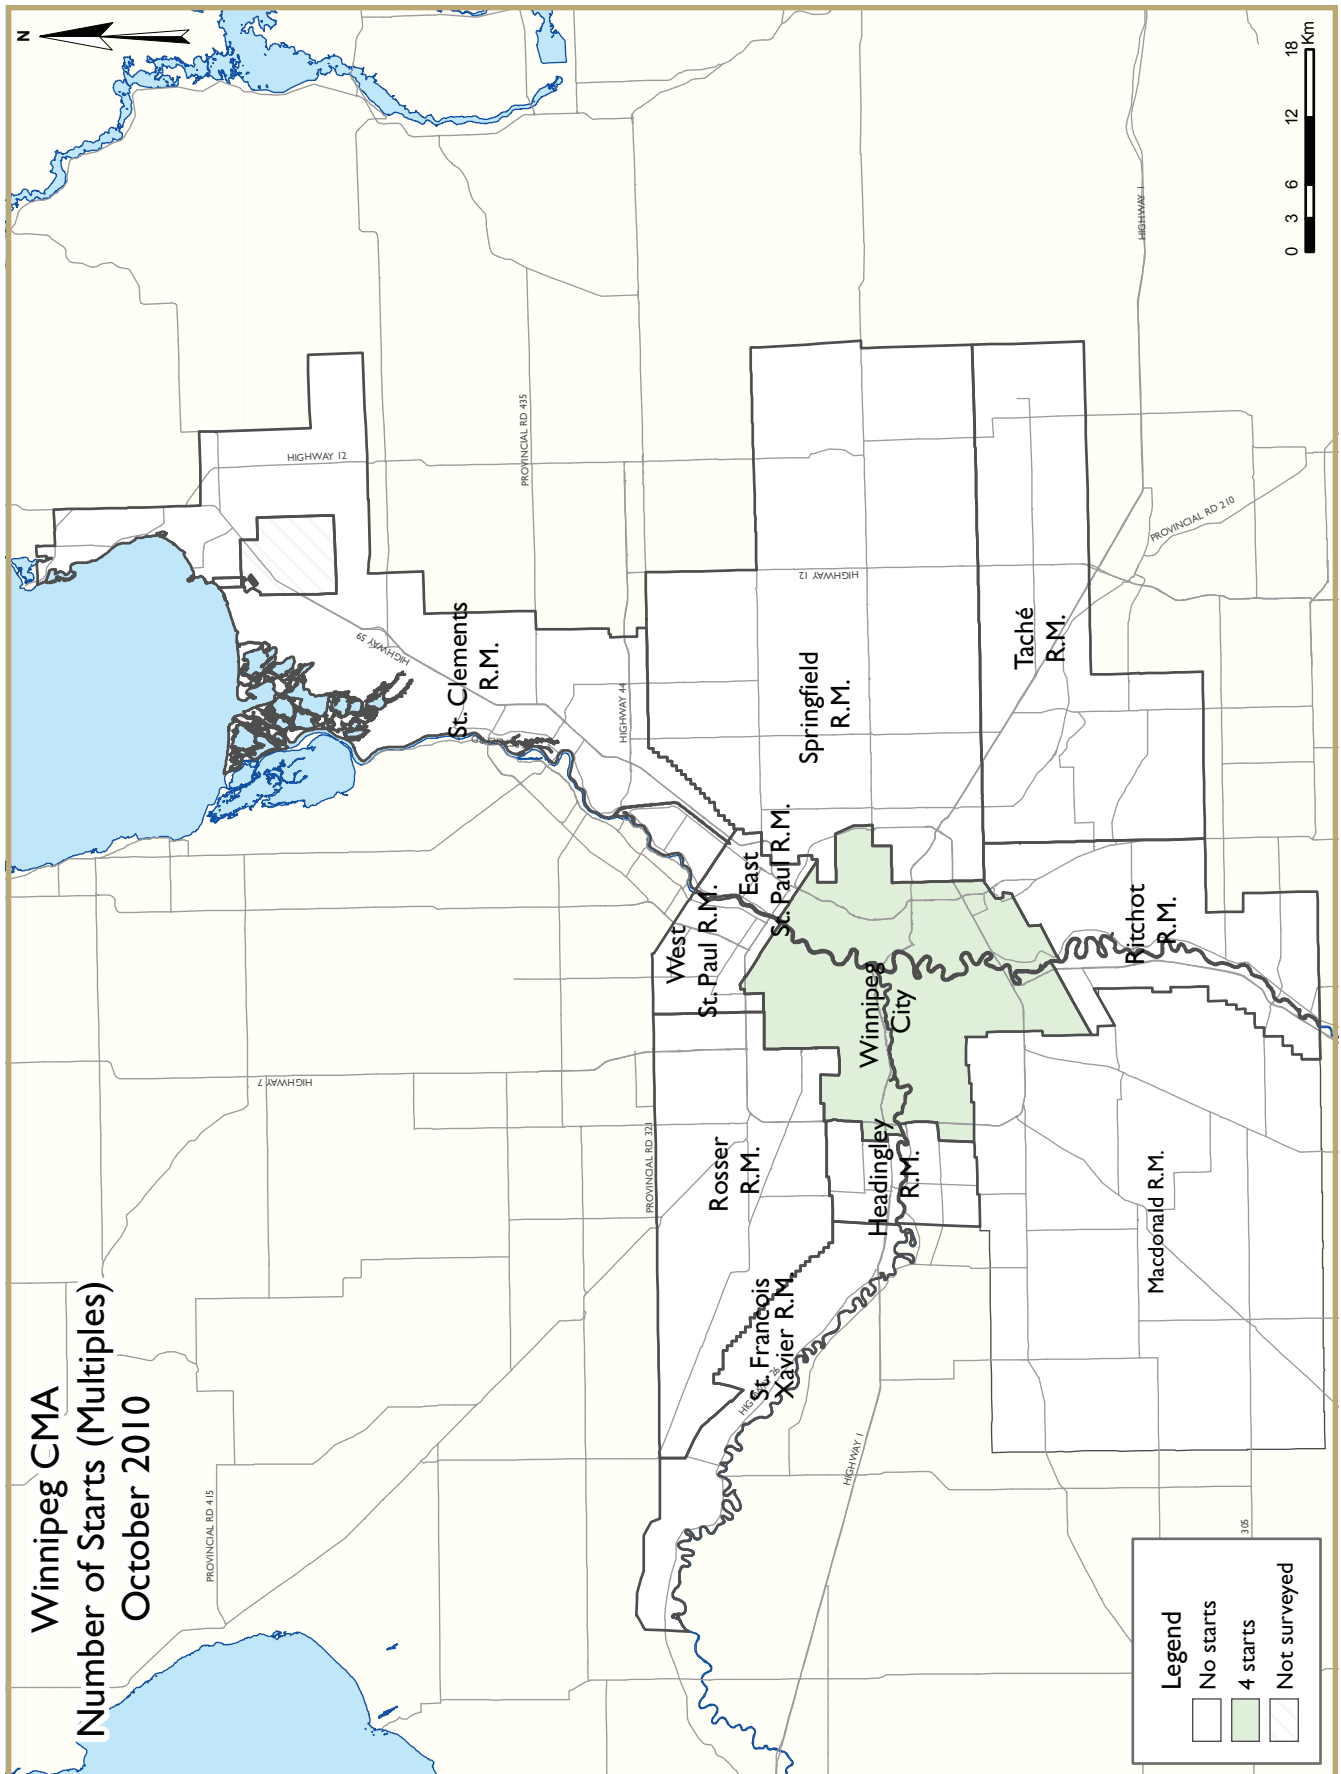

The multi-family sector, which includes semi-detached units, rows, and apartments, slowed again in October. Only four multi-family starts were recorded in October, down from 59 a year earlier. It is important to note that multiple-family starts can vary widely from month to month, depending upon the number of units in projects started that month. Despite a recent reduction in activity in October, construction in this sector remains substantially higher this year compared to 2009. A total of 1,129 multiple-family units were started in the first 10 months of the year, more than double the 510 recorded a year earlier.

The total supply of multi-family units, including those under construction or completed but not occupied advanced 15 per cent from the previous year, climbing to 1,254 units in October. Within the total supply of multi-family units, 59 per cent are intended for the rental market. The overall rise in supply can be attributed to a higher number of units under construction, as units in inventory were half what they were this time last year. The total number of multi-family units completed and not absorbed in October was 146 units. Of these, only two units were destined for the rental market. There were 43 multi-family units absorbed from the ownership market in October 2010, 30 per cent more than in October 2009.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
