Calgary CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: November 2010

New Home Market

Multi-family starts remain elevated while single-detached construction slows

Total housing starts in the Calgary Census Metropolitan Area (CMA) reached 784 units in October 2010, up from 732 units in the previous

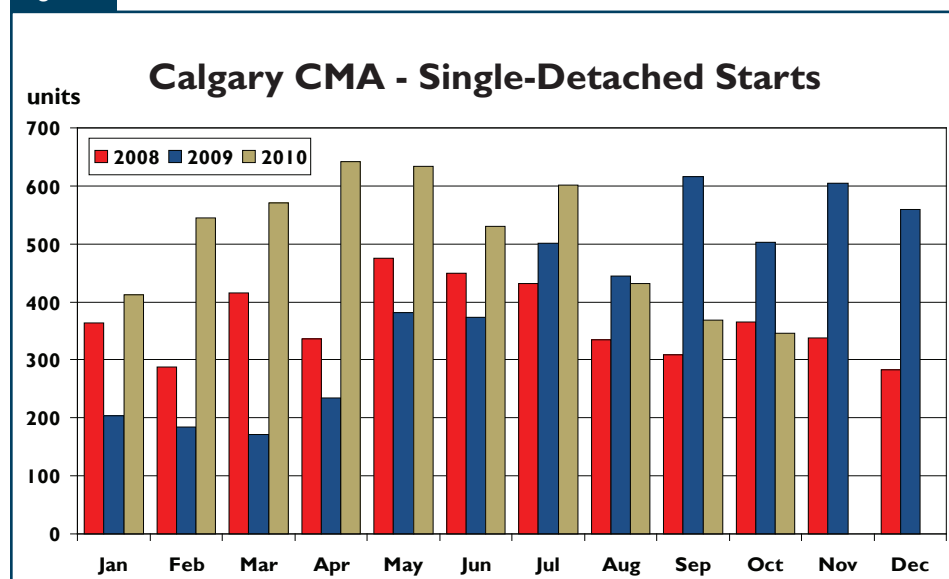

year. The year-over-year gain in total housing starts was due to the rise in multi-family production, as single-detached starts were down from the previous year. To the end of October, total housing starts increased from 4,829 units in 2009 to 8,221 units in 2010.

A total of 346 single-detached units broke ground in October 2010, down 31 per cent from the 502 units started in the previous year. Single-

detached construction continued to moderate as a result of heightened competition from the resale market and slowing sales. This represents the third consecutive month where starts have declined on a year-over-year basis, reaching the lowest number of starts for the month of October since 1990. After 10 months, 5,083 single-detached units were started, increasing 41 per cent from 3,612 units in the previous year.

Single-detached inventories of complete and unabsorbed units in October did not see much change from the previous month, increasing from 363 units to 366 units. Since the beginning of the year, single-detached inventories have remained relatively low, averaging less than 400 units per month. This is noticeably lower compared to the 10-year average of over 600 units per month. Of the units in inventory, 275 were show homes while 91 were spec units. Spec units in 2010 have been steadily rising as elevated active listings in the competing resale market have diverted some sales away from the new home market. Stronger

completion levels in recent months have also been a factor.

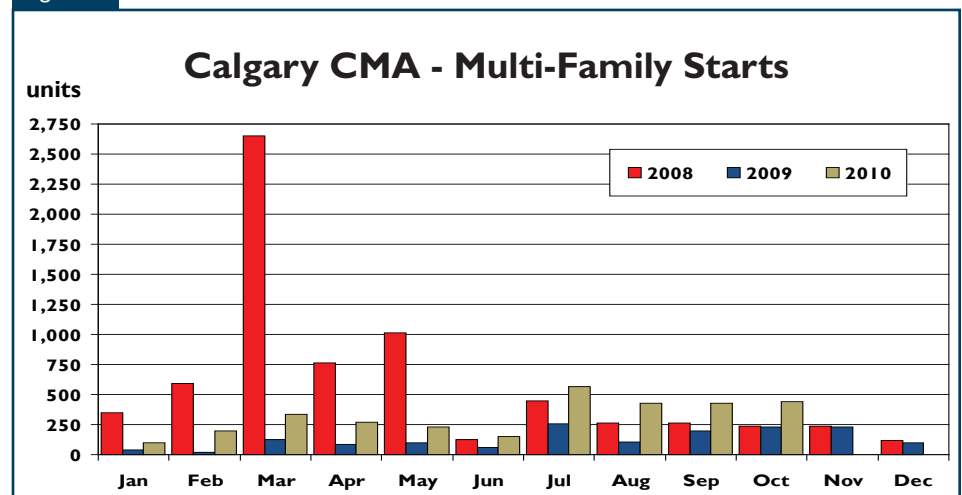

The median absorbed single-detached price, which is less influenced than the average by extreme values, reached \$443,603 in October, up seven per cent from the previous year when it was \$414,740. This represents the second consecutive month that the median price increased on a year-over-year basis. To the end of October, the median absorbed price was \$432,116,

six per cent lower than the previous year. Readers should note that these absorbed prices reflect units absorbed at or after completion in a given month, which is not necessarily the month when the price was negotiated.

Multi-family starts, which consist of semi-detached, row, and apartment units, increased from 230 units in October 2009 to 438 units in October 2010. A majority of the multi-family starts can be attributed to row housing, as the 250 units started in October represent the highest number of row starts for any month since May 1990. Semi-detached and apartment activity was also up from the previous year with 82 and 106 units breaking ground, respectively. To the end of October, multi-family starts totalled 3,138 units, up 158 per cent from the 1,217 units started in 2009.

Multi-family inventories in October declined for the first time on a month-over-month basis since May 2010, yet remain elevated by historical standards and will likely slow construction moving forward. October's decline in inventory was mainly attributed to the condominium apartment segment. There were

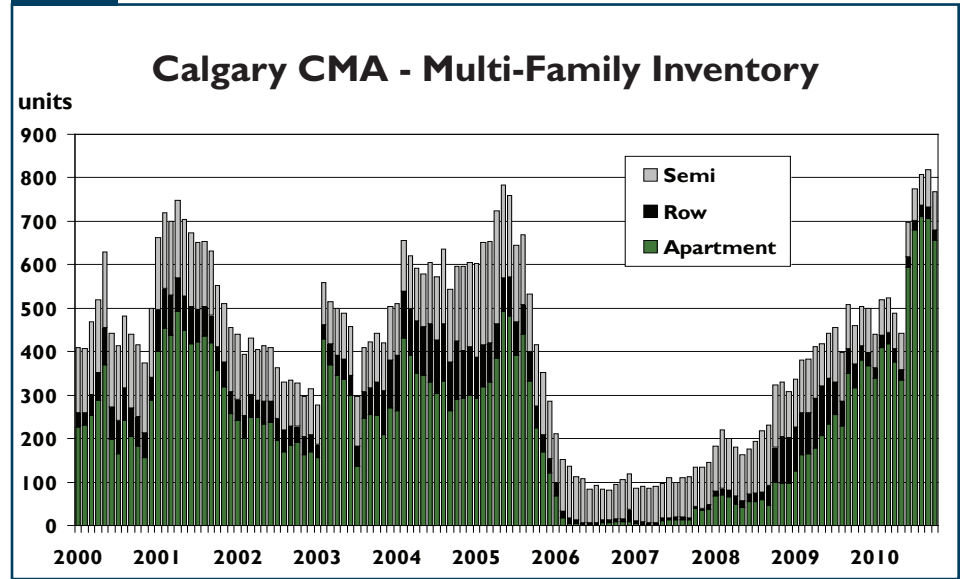

Figure 3

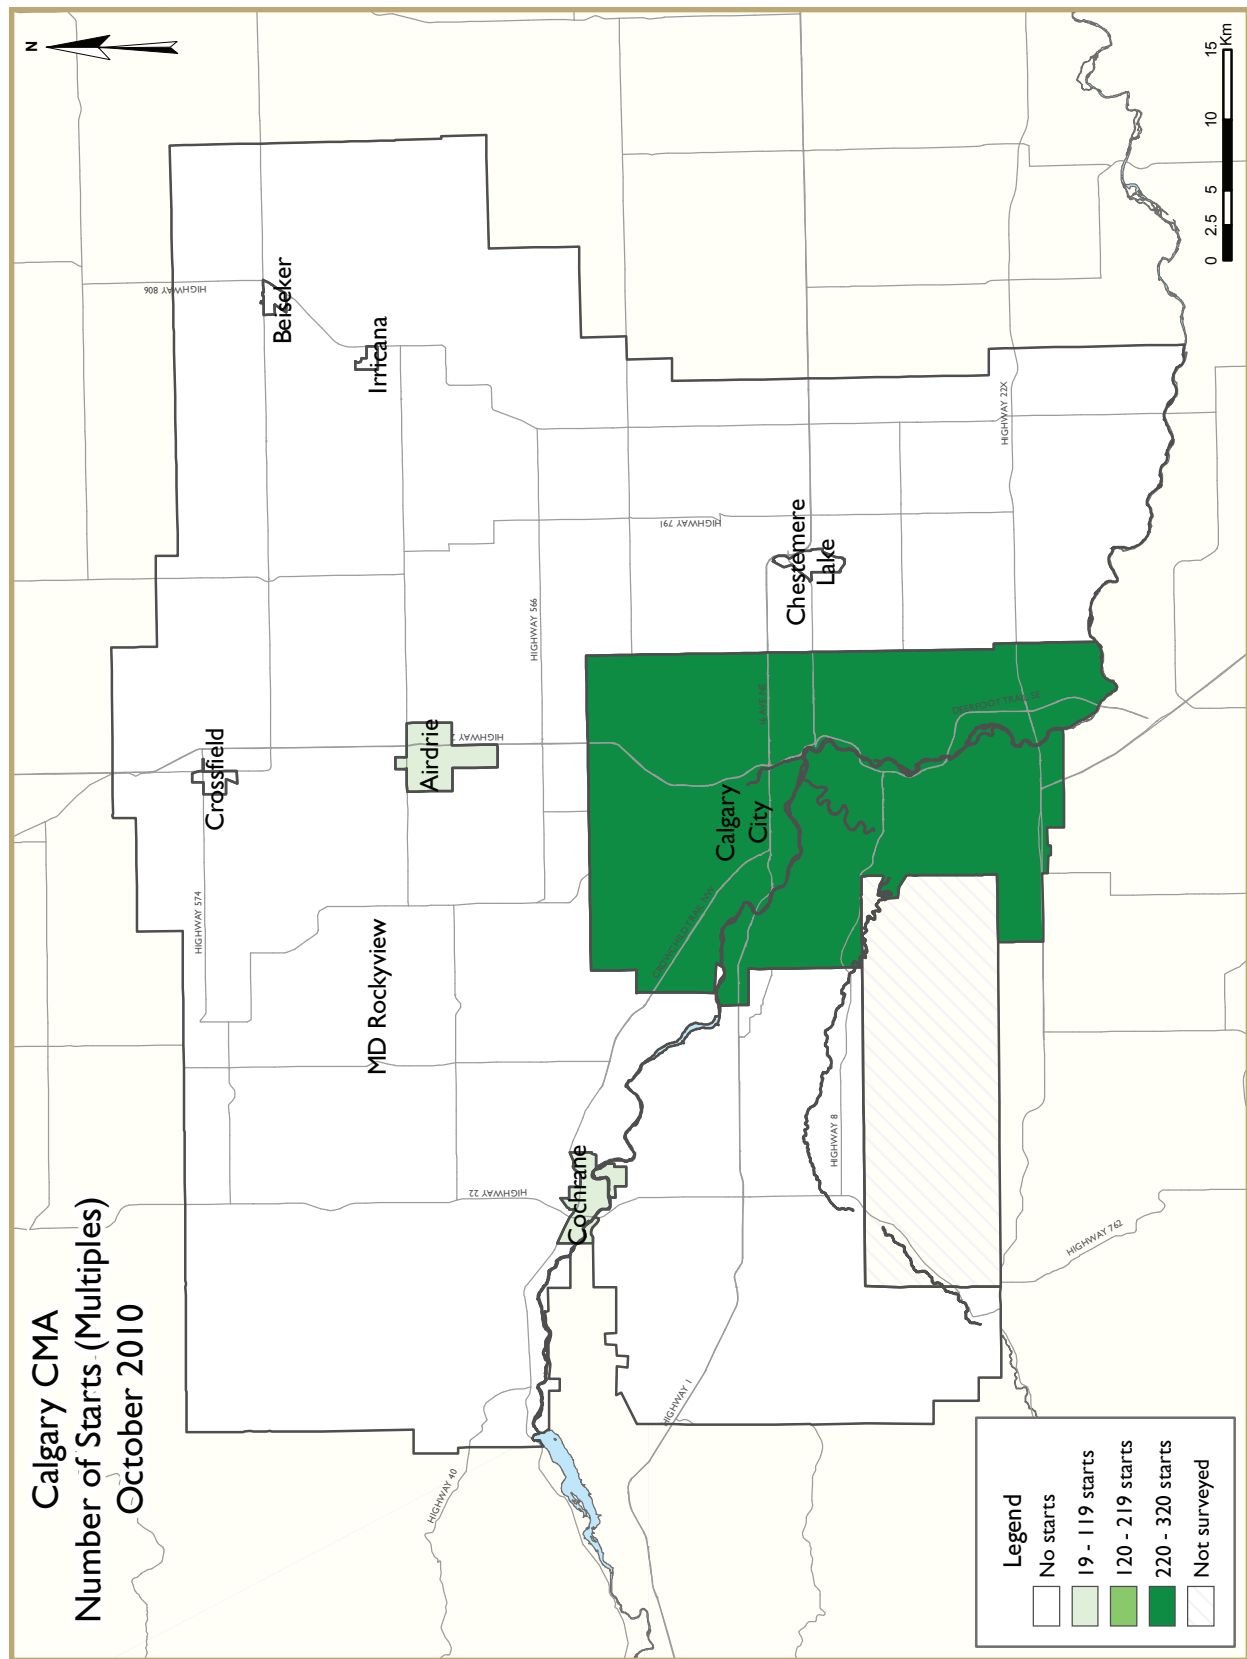

Source: CMHC

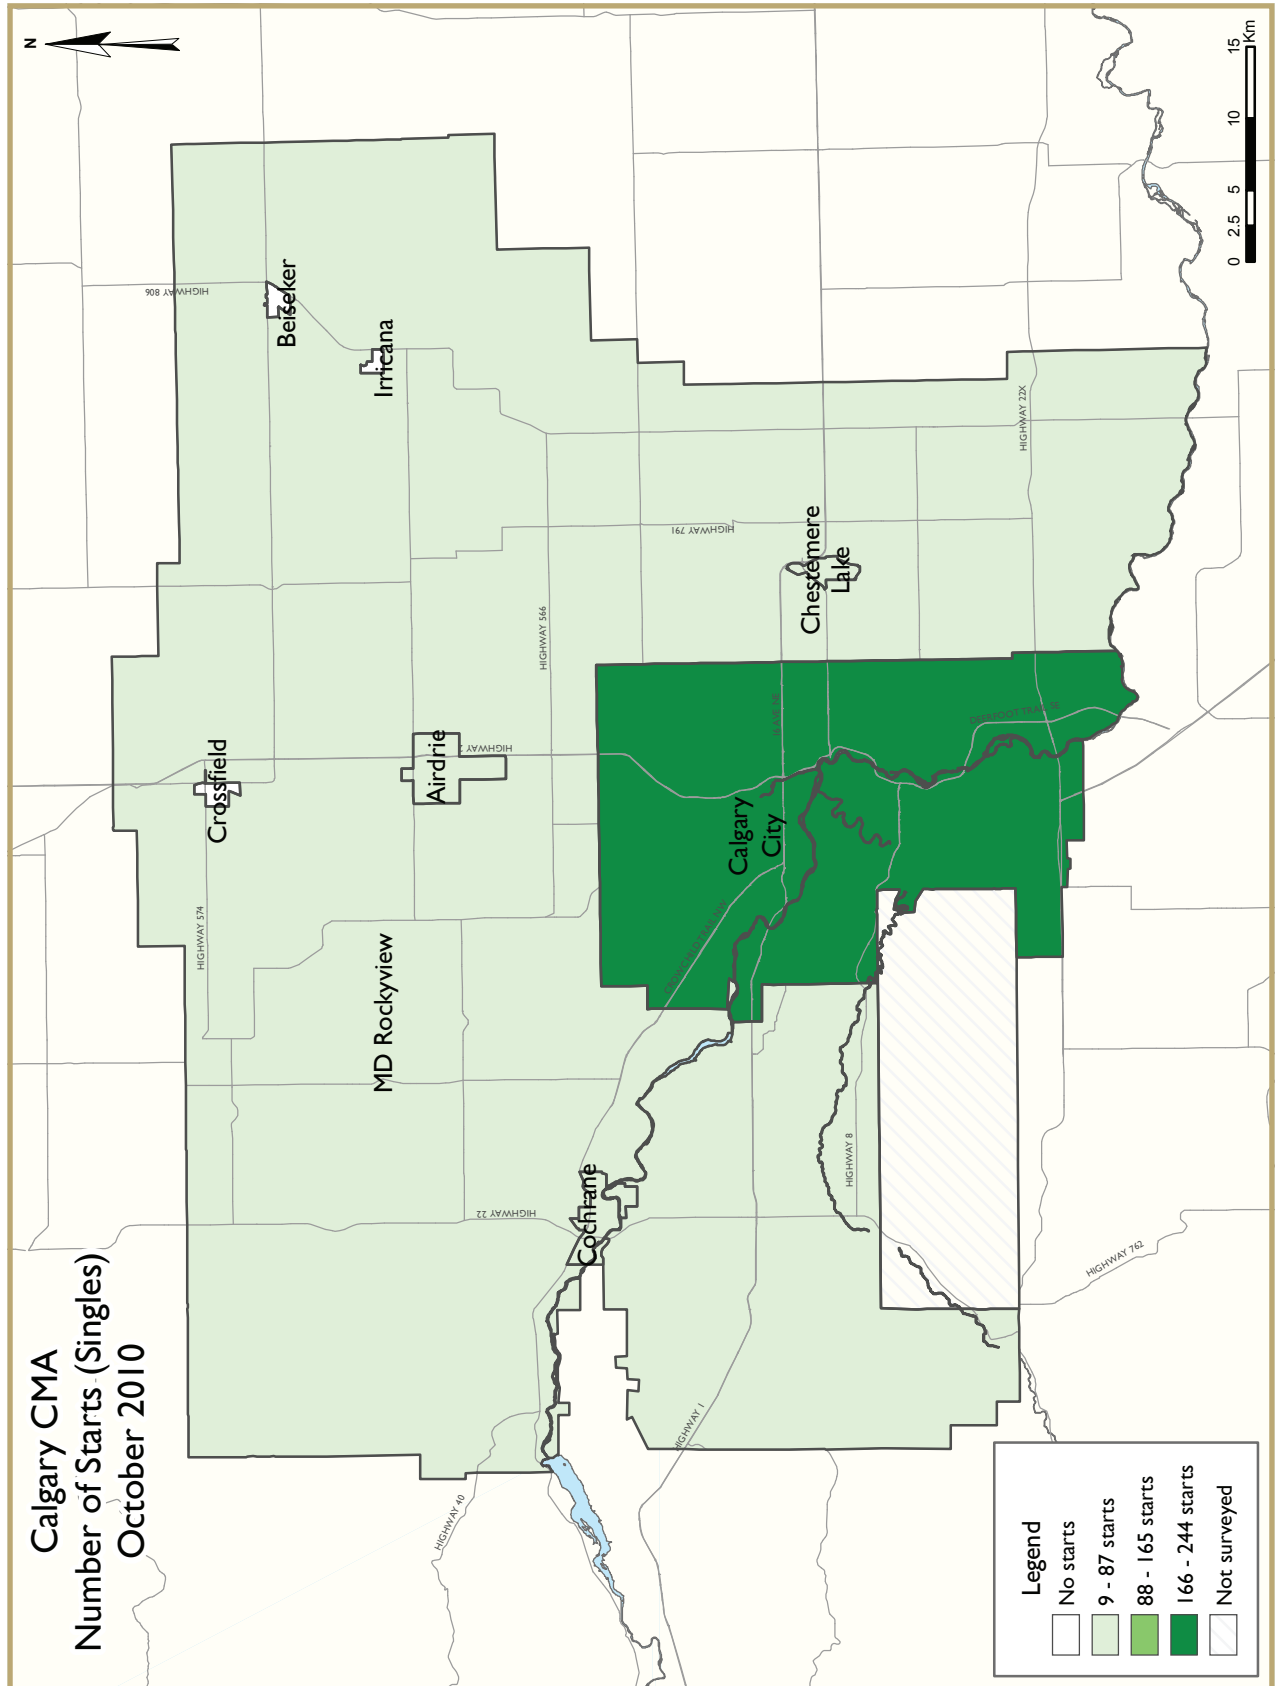

36 apartment units completed in October compared to 87 absorptions, resulting in a decrease in inventories. Despite the month-over-month decline, condominium apartment inventories remained near record highs, sitting at 656 units in October, more than double compared to the previous year. The combined inventory of semi-detached and row units in October did not change from September, as absorptions kept pace with completions. Compared to the previous year, however, semi-detached and row inventories have collectively declined from 144 units in 2009 to 111 units in 2010.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
