MARKET HOUSING INFORMATION

HOUSING NOW Sherbrooke CMA

Date Released: Fourth Quarter 2010

SHERBROOKE CMA **HOUSING STARTS** INTHETHIRD **QUARTER OF 2010**

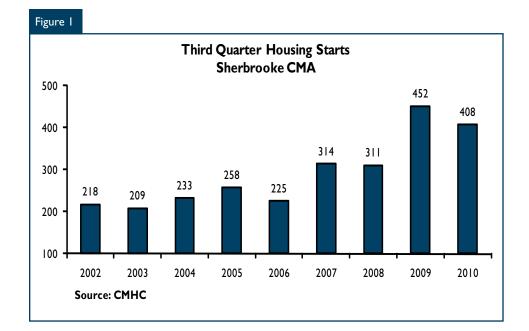

According to the latest results released by Canada Mortgage and Housing Corporation (CMHC), housing starts decreased in the third quarter of 2010 in the Sherbrooke census metropolitan area (CMA). In all, foundations were laid for 408 dwellings during this period, compared to 452 in the third quarter of 2009.

This drop was mainly due to the multi-unit housing segment. In fact, such starts fell by 12 per cent from the same period in 2009, reaching 257 units. The decrease in semi-

detached, row and apartment housing starts in the Sherbrooke CMA came totally as no surprise. Construction was particularly strong last year for these types of units, and a decline was therefore to be expected.

Single-detached housing starts, for their part, fell by 5 per cent (151 units in 2010, versus 159 in 2009), for a fifth consecutive quarterly decrease. From January to September of this year, foundations were laid for 457 units, down 13 per cent from the first nine months of 2009. Conversely, total year-to-date multi-unit housing starts increased by 37 per cent.

After nine months of activity, only the Gatineau area showed a decrease in housing activity (-10 per cent). In all other areas with 100,000 or more inhabitants, increases were registered, the strongest having been recorded in Trois-Rivières (+94 per cent), followed by Saguenay (+57 per cent), Québec (+24 per cent), Montréal (+21 per cent) and Sherbrooke (+15 per cent).

Construction decreases in all sectors of the CMA

Of all the sectors of the CMA, only the outlying area recorded an increase in housing starts in the third quarter of 2010 (42 units in 2010, compared to 33 in 2009). The popularity of single-detached homes was the driver of this growth. In Magog, housing starts decreased by 38 per cent, a result that was mainly attributable to a drop in the number of rental units started. Finally, in the city of Sherbrooke, the lower number of single-detached, semi-detached and row housing starts caused the overall residential construction volume to register a decline of 6 per cent in the third quarter of 2010.

MLS® sales down in the third quarter

According to data from the Quebec Federation of Real Estate Boards (QFREB), MLS® sales decreased by 15 per cent year-over-year in the third quarter of 2010, to 350 units. A similar decline had also been registered in the previous quarter. These successive drops were mainly due to the fact that many people, anticipating an increase in mortgage rates, had moved up their purchases into early 2010. The pool

of potential buyers was therefore reduced.

From January to September 2010, 1,379 homes changed hands in the Sherbrooke area, or about 50 fewer than in the same period last year. Condominiums managed to do well, however, with sales increasing by 48 per cent. In the single-family housing segment, 1,036 homes were sold, down 10 per cent from a year earlier. The situation remained stable for plexes (146 transactions), with about the same number of sales as in the

first nine months of 2009.

From a geographical standpoint, the city of Sherbrooke and the outlying area of the CMA both posted decreases in MLS® sales (-I per cent and -5 per cent, respectively). Only the city of Magog, with a gain of 4 per cent, bucked this trend.

Average MLS® price increases

After nine months of activity this year, the overall average MLS® price (for

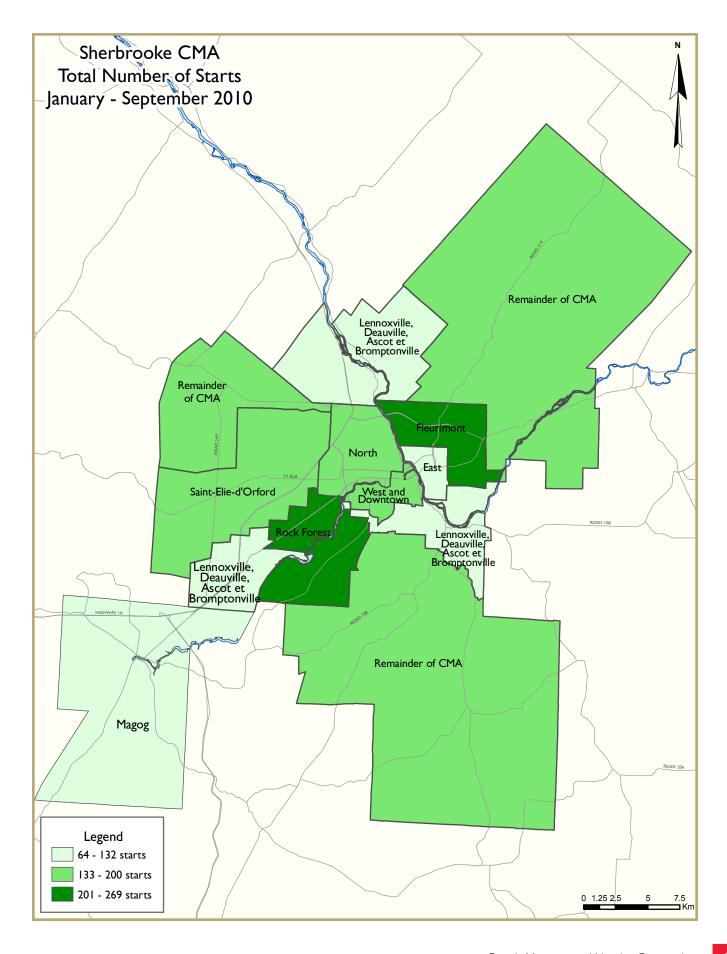

single-family houses, condominiums and plexes) climbed from \$192,965 to \$201,016, for an increase of 4 per cent. However, if sales were to continue falling and active listings were to keep rising over the next few months, the growth in the average MLS® price would likely slow down by the end of the year.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
