ALPHABETICAL LIST OF TERMS **153**

CLASSIFIED LIST **453**

Introduction

1. Scope and purpose

The *Government of Canada Core Subject Thesaurus* (CST) is a bilingual thesaurus consisting of terminology which represents all the fields treated in information resources of the Government of Canada. The English version of the thesaurus includes 4792 terms, of which 2173 are preferred terms and 2619 are non-preferred terms. All fields of knowledge are represented in the CST, to varying degrees. Its terminology is rather general because of the great variety of subjects covered by the thesaurus. By design, the thesaurus does not include specialized terminology used in specific and limited disciplines.

The CST is primarily intended for content managers, librarians, indexers and metadata developers in federal departments and agencies who must select controlled subject terms to index Government of Canada Web resources. In the Treasury Board *Standard on Metadata*, the CST is identified as the preferred source of controlled vocabulary for that purpose. Using the CST will help to reduce the duplication of effort in creating a variety of controlled vocabularies in the Government of Canada, as well as increase the interoperability of government web sites.

2. Bilingualism

The English and French versions of the CST were developed and are maintained simultaneously. Their status is identical, that is to say that neither language is to be considered the dominant or source language. The relational structures of the English and French versions, however, may differ in some cases to better reflect the terminology and concepts peculiar to each language.

3. Characteristics, content and structure

The CST was developed in accordance with the *Guidelines for the establishment and development of monolingual thesauri* (ISO 2788-1986) and the *Guidelines for the establishment and development of multilingual thesauri* (ISO 5964-1985).

In this thesaurus and by convention, English terms normally appear in the plural form, except for abstract concepts or entities that cannot be counted. In contrast, and again by linguistic convention, French terms generally appear in the singular form.

The current version includes three sections : a keyword index, an alphabetical list of terms and a classified list.

3.1 Keyword index

The keyword index is an alphabetical display of the words appearing in terms of the thesaurus. These words can be in one or several terms, either in a lead position (e.g., “Access” in “Access to information”, or elsewhere in a term (e.g., “access” in “Barrier free access”).

In the keyword index, non-preferred terms are accompanied by cross-references to preferred terms.

3.2 Alphabetical list of terms

The alphabetical list of terms is an alphabetical presentation of all the terms, preferred and non-preferred, accompanied by their semantic relationships.

Preferred terms

Preferred terms, also called *descriptors*, are terms used in indexing to represent given concepts. In the alphabetical list of terms, preferred terms appear in bold.

Non-preferred terms

Non-preferred terms are synonyms, quasi-synonyms or spelling variants of preferred terms. Non-preferred terms, also called *synonyms*, *non-descriptors*, *entry terms* or *lead-in terms*, should not be used for indexing. Their role is to point users to the preferred terms. In the alphabetical list of terms, non-preferred terms appear in italics and each is followed by a reference to the preferred term which should be used for indexing.

E.g. : *Cars*
USE: Automobiles

Semantic relationships

In term records, each preferred term can be shown with :

- An EQUIVALENT IN FRENCH.
- A SCOPE NOTE, specifying the meaning of a preferred term or defining its usage limitations for the purpose of indexing.
- One or several SYNONYMS, QUASI-SYNONYMS or SPELLING VARIANTS.
- One or several BROADER TERMS, preferred terms representing concepts broader in scope.
- One or several NARROWER TERMS, preferred terms representing concepts narrower in scope.
- One or several RELATED TERMS, preferred terms that are associated in meaning with the preferred term of the record, but that are not part of the same hierarchy.
- One or several SUBJECT CATEGORIES, that help to determine the meaning of the descriptor in the context of the thesaurus.

Abbreviations

The following abbreviations are used in the alphabetical list of terms :

FRE	French equivalent
SN	Scope note
UF	Used for
BT	Broader term
NT	Narrower term
RT	Related term
SC	Subject category

Sample record

Aquaculture

FRE:	Aquaculture
SN:	Culture of aquatic animals or plants.
UF:	Aquatic agriculture
	Aquiculture
BT:	Agriculture
NT:	Fish farming
RT:	Aquatic animals
	Aquatic plants
SC:	EC Economics and Industry
	NE Nature and Environment

3.3 Classified list

Each term in the thesaurus is classified according to broad subject categories. The classified list provides an alphabetical list of descriptors pertaining to each of the 19 categories. It offers a means for a quick survey of all available descriptors in a particular field. Subject categories must not to be used as indexing terms.

3.3.1 CST subject categories

AA	Arts, Music, Literature
AG	Agriculture
EC	Economics and Industry
ET	Education and Training
FM	Form descriptors
GV	Government and Politics
HE	Health and Safety
HI	History and Archaeology
IN	Information and Communications
LB	Labour
LN	Language and Linguistics
LW	Law
MI	Military
NE	Nature and Environment
PE	Persons
PR	Processes
SO	Society and Culture
ST	Science and Technology
TR	Transport

4. Indexing with the thesaurus

The CST is a post-coordinated controlled vocabulary. Unlike a pre-coordinated vocabulary, in which concepts are combined at the time of indexing to form more complex ideas, a post-coordinated vocabulary mainly proposes unitary concepts which are combined by the searcher only at the searching stage.

Compliance with the following indexing rules will ensure a greater uniformity in assigning indexing terms (preferred terms). By following the rules, all the CST users will represent the same concepts the same way in the “Subject” metadata element.

For more information on how to index Government of Canada information resources in accordance with the Treasury Board of Canada standards, please consult the *Government of Canada Metadata Implementation Guidelines For Web Resource Discovery*.

4.1 Indexing rules

a) Specificity

It is important to choose the most specific terms available when describing the subject of a document. Thus, a resource about aquatic birds should be indexed with the preferred term “Aquatic birds” rather than with the broader terms “Birds” and “Aquatic animals”.

Similarly, a document about birds in general should be indexed with the preferred term “Birds” rather than with the broader term “Animals” or the narrower terms “Aquatic birds” and “Migratory birds”.

As a general rule, a document should not be indexed with both broader and narrower terms from the same hierarchical string. However, it would be necessary, for example, to index a resource about birds in general, which also included a substantial section on migratory birds using both “Birds” and “Migratory birds” as preferred terms.

The semantic structure of the thesaurus is very useful for identifying the appropriate preferred terms. Relationships between terms (broader term, narrower term and related term), as well as scope notes, help to define the meaning of the preferred terms, to suggest other terms that might be relevant, and therefore are aids to selecting the most adequate terms.

b) Exhaustivity

Several preferred terms are often necessary to fully express the subject of a document. For example, to index a site about transportation of toxic waste and other dangerous products by rail or by truck will be represented by the following set of preferred terms:

Hazardous materials transport
Rail transport
Road transport
Toxic substances

As far as possible, every essential concept dealt with in a document should be represented by a preferred term.

c) Consistency

It is essential to use the form of the preferred terms as presented in the CST when using them in the “Subject” metadata element.

As a general rule, only the first letter of an indexing term is capitalized. Conventions are also followed in the CST regarding the use of singular and plural forms. In English, count nouns (which are subject to the question “how many?”) are generally in the plural form, while non-count nouns (which are subject to the question “how much?”), as well as abstract concepts, are in the singular form. In French, most terms are in the singular form.

d) Indexing language

Documents in English must be indexed with the English version of the thesaurus and documents in French with the French version. Bilingual documents should be indexed in both languages.

5. Thesaurus background

The CST has its origins in the *Subject Thesaurus* of the Depository Services Program (DSP) at Public Works and Government Services Canada. The *Subject Thesaurus* of the DSP was developed between May 1999 and February 2000 as a source of indexing terms for the Government of Canada Publications Database. In 2001, various projects for indexing information resources of the Government of Canada led to the creation of the CST, by enlarging the scope of the *Subject Thesaurus*. Between 2001 and 2004, the *Subject Thesaurus* of the DSP was derived from the CST. In June 2006, Library and Archives Canada took over the responsibility of managing and updating the CST from the Depository Services Program.

6. Updating of the thesaurus

The CST is managed and updated by Library and Archives Canada.

Users are invited to forward their comments and suggestions concerning this version of the thesaurus to :

Editor, Government of Canada Core Subject Thesaurus

Telehealth
FRE: Télésanté
SN: The use of information and communications technologies to enable health care and health information services activities. Telehealth is a general, inclusive term referring to a variety of electronic-based health service activities such as actual physician-patient interactions via telemedicine; the provision of education and information services designed to increase awareness of diagnoses, medical conditions, treatments, and good health practices; or clinical decision and diagnostic interactions between health professionals.
