**FOREWORD** 

The Canadian Council of Directors of Apprenticeship (CCDA) recognizes this National Occupational Analysis as the national standard for the occupation of ironworker (reinforcing).

## Background

The first National Conference on Apprenticeship in Trades and Industries, held in Ottawa in 1952, recommended that the federal government be requested to cooperate with provincial and territorial apprenticeship committees and officials in preparing analyses of a number of skilled occupations. To this end, Human Resources and Skills Development Canada (HRSDC) sponsors a program, under the guidance of the CCDA, to develop a series of National Occupational Analyses (NOAs).

The NOAs have the following objectives:

- to describe and group the tasks performed by skilled workers;
- to identify which tasks are performed in every province and territory;
- to develop instruments for use in the preparation of Interprovincial Red Seal Examinations and curricula for training leading to the certification of skilled workers;
- to facilitate the mobility of apprentices and skilled workers in Canada; and,
- to supply employers, employees, associations, industries, training institutions and governments with analyses of occupations.

# **ACKNOWLEDGEMENTS**

The CCDA and HRSDC wish to express sincere appreciation for the contribution of the many tradespersons, industrial establishments, professional associations, labour organizations, provincial and territorial government departments and agencies, and all others who contributed to this publication.

Special acknowledgement is extended by HRSDC and the CCDA to the representatives from the trade across Canada who contributed to the development of this document.

This analysis was prepared by the Workplace Partnerships Directorate of HRSDC. The coordinating, facilitating and processing of this analysis were undertaken by employees of the NOA development team of the Trades and Apprenticeship Division. Barry Yerex for the host jurisdiction of Alberta also participated in the development of this NOA.

## Requests for printed copies of National Occupational Analyses may be forwarded to:

Trades and Apprenticeship Division Workplace Partnership Directorate Human Resources and Skills Development Canada 140 Promenade du Portage, Phase IV, 5<sup>th</sup> Floor Gatineau, Quebec K1A 0J9

These publications can be ordered or downloaded online at: <a href="www.red-seal.ca">www.red-seal.ca</a>. Links to Essential Skills Profiles for some of these trades are also available on this website.

# STRUCTURE OF ANALYSIS

To facilitate understanding of the occupation, the work performed by tradespersons is divided into the following categories:

**Blocks** the largest division within the analysis that is comprised of a distinct

set of trade activities

**Tasks** distinct actions that describe the activities within a block

Sub-Tasks distinct actions that describe the activities within a task

Supporting Knowledge and

adequately perform the sub-task

**Abilities** 

The analysis also provides the following information:

**Trends** changes identified that impact or will impact the trade including work

practices, technological advances, and new materials and equipment

the elements of skill and knowledge that an individual must acquire to

Related a list of products, items, materials and other elements relevant to the

Components block

Tools and categories of tools and equipment used to perform all tasks in the

**Equipment** block; these tools and equipment are listed in Appendix A The appendices located at the end of the analysis are described as follows:

Appendix A — Tools and Equipment	a non-exhaustive list of tools and equipment used in this trade
Appendix B — Glossary	definitions or explanations of selected technical terms used in the analysis
Appendix C — Acronyms	a list of acronyms used in the analysis with their full name
Appendix D — Block and Task Weighting	the block and task percentages submitted by each jurisdiction, and the national averages of these percentages; these national averages determine the number of questions for each block and task in the Interprovincial exam
Appendix E — Pie Chart	a graph which depicts the national percentages of exam questions assigned to blocks
Appendix F — Task Profile Chart	a chart which outlines graphically the blocks, tasks and sub-tasks of this analysis

# DEVELOPMENT AND VALIDATION OF ANALYSIS

## **Development of Analysis**

A draft analysis is developed by a committee of industry experts in the field led by a team of facilitators from HRSDC. This draft analysis breaks down all the tasks performed in the occupation and describes the knowledge and abilities required for a tradesperson to demonstrate competence in the trade.

## **Draft Review**

The NOA development team then forwards a copy of the analysis and its translation to provincial and territorial authorities for a review of its content and structure. Their recommendations are assessed and incorporated into the analysis.

## Validation and Weighting

The analysis is sent to all provinces and territories for validation and weighting. Participating jurisdictions consult with industry to validate and weight the document, examining the blocks, tasks and sub-tasks of the analysis as follows:

<b>BLOCKS</b> Each jurisdiction assigns a percentage of questions to each	block for an
---	--------------

examination that would cover the entire trade.

TASKS Each jurisdiction assigns a percentage of exam questions to each task within a

block.

SUB-TASKS Each jurisdiction indicates, with a YES or NO, whether or not each sub-task is

performed by skilled workers within the occupation in its jurisdiction.

The results of this exercise are submitted to the NOA development team who then analyzes the data and incorporates it into the document. The NOA provides the individual jurisdictional validation results as well as the national averages of all responses. The national averages for block and task weighting guide the Interprovincial Red Seal Examination plan for the trade.

This method for the validation of the NOA also identifies common core sub-tasks across Canada for the occupation. If at least 70% of the responding jurisdictions perform a sub-task, it shall be considered common core. Interprovincial Red Seal Examinations are based on the common core sub-tasks identified through this validation process.

## Definitions for Validation and Weighting

YES sub-task performed by qualified workers in the occupation in a specific

jurisdiction

NO sub-task not performed by qualified workers in the occupation in a

specific jurisdiction

**NV** analysis <u>N</u>ot <u>V</u>alidated by a province/territory

ND trade <u>Not Designated in a province/territory</u>

NOT sub-task, task or block performed by less than 70% of responding jurisdictions; these will not be tested by the Interprovincial Red Seal

CORE (NCC) Examination for the trade

**NATIONAL** average percentage of questions assigned to each block and task in

**AVERAGES** % Interprovincial Red Seal Examination for the trade

**SAFETY** 

Safe working procedures and conditions, accident prevention and the preservation of health are of primary importance to industry in Canada. These responsibilities are shared and require the joint efforts of government, employers and employees. It is imperative that all parties are aware of circumstances and conditions that may lead to injury or harm. Safe learning experiences and environments can be created by controlling the variables and behaviours that may contribute to accidents or injury.

It is generally recognized that a safety-conscious attitude and work practices contribute to a healthy, safe and accident-free working environment.

It is imperative to apply and be familiar with the Occupational Health and Safety (OH&S) Acts and Workplace Hazardous Material Information System (WHMIS) Regulations. As well, it is essential to determine workplace hazards and take measures to protect oneself, co-workers, the public and the environment.

Safety education is an integral part of training in all jurisdictions. As safety is an imperative part of all trades, it is assumed and therefore it is not included as a qualifier of any activities. However, the technical safety tasks and sub-tasks specific to the trade are included throughout this analysis.

# SCOPE OF THE IRONWORKER (REINFORCING) TRADE

"Ironworker (Reinforcing)" is this trade's official Red Seal occupational title approved by the CCDA. This analysis covers tasks performed by an ironworker (reinforcing) whose occupational title has been identified by some provinces and territories of Canada under the following names:

	NL	NS	PE	NB	QC	ON	MB	SK	AB	ВС	NT	YT	NU
Ironworker (Reinforcing)	✓	✓	✓						<b>✓</b>	<b>✓</b>			
Ironworker Reinforcing Rebar								✓					
Reinforcing Rodworker						✓							
Reinforcing Steel Erector					<b>√</b>								

Ironworkers (Reinforcing) cut, bend, lay out, place and weld reinforcing steel rods, welded wire fabric and composite materials in a wide variety of poured concrete products and structures such as buildings, highways, bridges, stadiums and towers. They also place and stress various post-tensioning systems in structures such as parking garages, bridges and stadiums where longer unsupported spans are required.

Ironworkers (Reinforcing) unload fabricated or straight reinforcing materials and place it for hoisting as needed. While the reinforcing material is usually pre-cut and fabricated off-site, ironworkers (reinforcing) may be called upon to cut and bend them according to design specifications and drawings. Ironworkers (Reinforcing) may pre-assemble reinforcing material by laying it out and connecting sub-assemblies on the ground prior to final placement. They organize the hoisting of the components by connecting cables and slings to the components and directing crane operators. They position, align and secure components according to drawings, using a variety of methods. After placing post-tensioning systems, they stress the tendons to predetermined specifications using hydraulic jacks and pumps.

Ironworkers (Reinforcing) work outside in all weather. They may also work in underground work sites. They work in a variety of locations ranging from remote areas where they could work on dams, bridges or mining projects, to urban environments where they could work on high-rise buildings, parking garages, transit systems, tunnels or stadiums. The work may require that they be away from home for extended periods of time. The work often requires considerable standing, bending, crawling, lifting, climbing, pulling and reaching and is often conducted in cramped, confined spaces or at heights. Hazards include injury from electrocution, falls or falling objects.

Ironworkers (Reinforcing) are required to have good mechanical aptitude, the ability to visualize finished products in three dimensions, and the ability to work at heights in varying extreme climates. A thorough knowledge of the principles of lifting and hoisting is required as is a familiarity with a variety of metal fastening and joining methods. All ironworkers (reinforcing) are required to be competent in the use and care of a variety of hand and power tools and equipment such as tying tools, pry bars, jacks, torches, cut-off saws, hydraulic benders, shears, welding equipment, stressing equipment and cranes.

Because of the nature of the work, a primary concern of the ironworkers (reinforcing) is workplace safety; therefore ironworkers (reinforcing) must be thoroughly familiar with the applicable sections of local, provincial and federal building and safety codes.

Ironworkers (Reinforcing) tend to work in teams, and team coordination is a large component of the occupation especially when hoisting and placing large, heavy components high above the ground.

Ironworkers (Reinforcing) interact and work cooperatively with a wide variety of construction tradespeople such as ironworkers (structural/ornamental), crane operators, steel detailers, welders, carpenters, concrete finishers and metal fabricators.

## OCCUPATIONAL OBSERVATIONS

Technology continues to contribute to many changes in equipment design and construction materials. These innovations require constantly changing methods and techniques governed by appropriate attitudes towards the current high standards for fabrication, erection and installation of components. Maintaining updated knowledge of these changes presents a daily challenge to the people of this trade.

The work of an ironworker (reinforcing), by its nature, possesses inherent hazards. Safe work procedures, best practices and job hazard analysis assist in controlling or eliminating hazards. However, errors in judgment or in practical application of trade knowledge can be costly, both in terms of injury to workers and damage to equipment or materials. Workers must maintain constant attention to the application of safety and accident prevention at all times.

Personal protective equipment (PPE) such as fall arrest equipment, aerial lift platforms, breathing apparatus and fume extraction equipment have become an integral part of all worksites and places of employment.

Ironworkers (Reinforcing) are increasingly being called on to document and maintain records due to more stringent laws and regulations. The end products in industrial and other applications must be appropriately installed, inspected and documented. This places more responsibility on supervisors, quality control personnel and the individuals who perform the installation and assembly of components. The tremendous variety in equipment and methods means that the ironworker (reinforcing) must be more knowledgeable and adaptable than ever before.

# BLOCK A

# OCCUPATIONAL SKILLS

#### **Trends**

There is greater emphasis on training and upgrading of ironworkers (reinforcing). There is also a greater awareness of safety and safer working conditions and an increased emphasis on job coordination and scheduling. Also, there have been significant changes in the engineering and technology of ironworker (reinforcing) tools and equipment such as laser levels and electronic measuring instruments.

## Task 1

## Interprets occupational documentation.

Related Components (including, but not limited to) Drawings (structural, architectural, mechanical, engineering, detail and layout), codes (American National Standards Institute [ANSI], Canadian Standards Association [CSA], Concrete Reinforcing Steel Institute [CRSI], and WHMIS), specifications, shipping documentation, manufacturers' manuals and OH&S legislation.

Tools and **Equipment** 

Architectural scales, calculator, measuring tape.

#### Sub-task

## A-1.01 Interprets drawings and specifications.

B-6.03.07

BLOCK C CRANES

#### **Trends**

Modern cranes have greater lifting capacity and are more precise in the positioning of their loads, often within millimetres of specifications. The erection of cranes has also become more automatic, with modern cranes greatly assisting in their own erection.

## Task 7

## Assembles cranes.

Related Components (including, but not limited to) Mats, pads, dunnage, boom sections and jib, counterweight, pins and cotter pins, bolts, blocks and sheaves, headache ball, hook, wedge socket bridle, mast, outriggers, gantry, cable components (pendant lines, jib lines, guide lines, load lines).

Tools and **Equipment** 

Sledge hammer, back-out hammer (B & O hammer), wrenches, pry bars, rigging hardware, PPE, pliers, assist cranes, hand tools, types of cranes (rough terrain cranes, all terrain, crawler, hydraulic, tower, boom, electric overhead travelling [EOT], heavy lift, gantries, knuckle boom).

#### Sub-task

C-7.01	Assesses site	hazards.

BLOCK D

#### REINFORCING

#### **Trends**

The occupation has seen the increased development and use of composite materials such as stainless steel tendons. New technologies are being developed and introduced to the occupation allowing for greater automation such as automated benders and tiers. More intricate and elaborate, non-linear building design has led to an increase in creative and innovative reinforcing techniques. The occupation has also seen an increase in the demand for compliance to new seismic codes.

#### Task 9

#### Fabricates on-site.

Related Components (including, but not limited to) Rebar, welded wire mesh fabric, composite materials, tie wire, bar supports (bolsters, chairs and concrete blocks), dunnage, couplers, coupling devices.

# Tools and **Equipment**

Sledge hammer, pliers, cutters, quick-cut saws, measuring tape, chalk, shears, bolt cutters, hickey, power wrench, pneumatic gun, portable grinder, rebar bender, power bender, hammer drill, rigging equipment, cutting torch, come-alongs, grip hoists, wire reel, work positioning hook.

## **BLOCK E**

#### PRE-STRESSES/POST-TENSIONS

#### **Trends**

The occupation has seen an increase in the use of composite materials resulting in changes to the pre-stressed and post-stressed tensioning systems. An increased awareness of environmental concerns has resulted in the development of new handling techniques and procedures. Due to the aging of major structures nationwide, the occupation continues to see an increase in repair and restoration. Advancements in technology have allowed for the construction of longer spans and larger open spaces.

#### Task 11

#### Places pre-stressed/post-tensioning systems.

Related Components (including, but not limited to) Bulkheads, coils, anchors (barrel, cable), pocket former, cable tendons, bar tendons, dead heads, trumpets, trumplates, wedges, wedge plates, blocks, duct, duct tape, bursting steel components, couplers, bearing plate, grout.

# Tools and Equipment

Measuring tape, marking tools (crayons, soapstone, pencil), threaded rod, nuts, bolts, setting tools, grease, caulking, carousel, cable feeder, hammer, heat shrink, cutting tools, drill bits, pliers, wrenches, sockets, tie wire, knife, tiger torch, winches, air tugger.

#### Sub-task

#### E-11.01 Lays out profile.

#### TITLES OF BLOCKS

BLOCK A	Occupational Skills	BLOCK D	Reinforcing
BLOCK B	Rigging and Hoisting	BLOCK E	Pre-Stresses/Post-Tensions
BLOCK C	Cranes		

<sup>\*</sup>Average percentage of the total number of questions on an interprovincial examination, assigned to assess each block of the analysis, as derived from the collective input from workers within the occupation from all areas of Canada. Interprovincial examinations typically have from 100 to 150 multiple-choice questions.

# APPENDIX F

# TASK PROFILE CHART — Ironworker (Reinforcing)

BLOCKS	TASKS	SUB-TASKS										
A - OCCUPATIONAL SKILLS	1. Interprets occupational documentation.	1.01 Interprets drawings and specifications.	1.02 Interprets standards, regulations and procedures.									
	2. Communicates in the workplace.	2.01 Communicates with co-workers.	2.02 Communicates with other disciplines.	2.03 Communicates with apprentices.	2.04 Uses hand signals.	2.05 Communicates electronically.						
	3. Uses and maintains tools and equipment.	3.01 Uses hand tools.	3.02 Uses power tools.	3.03 Uses bending tools and equipment.	3.04 Uses aerial work platforms.	3.05 Uses ladders.						
		3.06 Uses scaffolding.	3.07 Uses personal protective equipment (PPE).	3.08 Uses welding equipment.	3.09 Uses oxy-fuel cutting equipment.							
	4. Organizes work.	4.01 Organizes materials and supplies.	4.02 Marks layouts.	4.03 Maintains safe work environment.	4.04 Assesses site hazards.	4.05 Plans work tasks.						
B - RIGGING AND HOISTING	5. Selects rigging equipment.	5.01 Matches load to lift capability.	5.02 Inspects rigging equipment.	5.03 Maintains rigging equipment.								
	6. Uses hoisting and lifting equipment.	6.01 Uses hoisting equipment.	6.02 Uses lifting equipment.	6.03 Attaches rigging to load.								

BLOCKS	TASKS			SUB-TASKS		
C - CRANES	7. Assembles cranes.	7.01 Assesses site hazards.	7.02 Determines crane position.	7.03 Prepares bases.	7.04 Assembles cranes and components.	
	8. Disassembles cranes.	8.01 Disassembles crane components.	8.02 Prepares crane for transport.			
D - REINFORCING	9. Fabricates onsite.	9.01 Cuts material.	9.02 Bends material.			
	10. Installs reinforcing material.	10.01 Places reinforcing material.	10.02 Ties material.	10.03 Joins material.	10.04 Interprets placing drawings.	
E - PRE-STRESSES/ POST-TENSIONS	11. Places pre- stressed/post- tensioning systems.	11.01 Lays out profile.	11.02 Places tendons and accessories.	11.03 Installs bursting steel and anchorages.	11.04 Connects tendons to anchors.	11.05 Protects exposed tendons.
	12. Stresses tendons.	12.01 Sets up stressing equipment.	12.02 Tensions tendons.	12.03 Cuts and caps tendons.	12.04 Removes stressing equipment.	12.05 De-stresses tendons.
	13. Grouts tendons.	13.01 Sets up grouting equipment.	13.02 Installs grouts.
