

Major Appliances

Updated January 2011

When Canadians want to save energy and money and help the environment, they look for the ENERGY STAR® symbol to identify energy-efficient products.

Major appliances are one of the biggest energy users in a typical Canadian home. That's why more Canadians are looking for the ENERGY STAR symbol when shopping for new appliances.

ENERGY STAR is the symbol for energy efficiency for many products in Canada and the world. Major household appliances that qualify for the ENERGY STAR symbol are tested to prescribed specifications. Ongoing testing after qualification ensures products continue to meet the ENERGY STAR requirements. These products save consumers money because they use less energy than conventional products while offering the same or better performance. From

an environmental perspective, improving energy efficiency reduces greenhouse gases that contribute to climate change.

DID YOU KNOW?

A 2008 ENERGY STAR qualified refrigerator uses about 38 percent of the energy used by a refrigerator made in 1990. Don't lose these energy savings by using your old refrigerator in the basement or garage.

How do appliances qualify for the ENERGY STAR symbol?

In Canada, the ENERGY STAR symbol

can be used to promote the sale of qualifying models of five types of appliances – clothes washers, refrigerators and freezers, dishwashers, dehumidifiers and water coolers. Consult the ENERGY STAR listings for qualified models.

To qualify:

- ▶ Residential clothes washers and residential-style commercial clothes washers must have a modified energy factor of 56.6 L/kWh per cycle or greater and a maximum water factor (WF) of 0.8 L/cycle/L. The modified energy factor of an appliance takes into account the amount of energy used by the dryer to remove the remaining moisture content in the clothes. To achieve this target, a clothes washer must have advanced design features that deliver cleaning performance using less water and energy.
- ▶ Standard-sized refrigerators must be at least 20 percent and standard-sized freezers must be at least 10 percent more efficient than the minimum federal standard in Canada's *Energy Efficiency Regulations*. Compact refrigerators and freezers must achieve energy efficiency levels that are at least 20 percent higher than the minimum regulated standard in Canada. These appliances typically have a more energy-efficient compressor and better insulation than conventional models.
- ▶ Standard-sized dishwashers must have a maximum total annual energy consumption (TAEC) of 324 kWh/year and a maximum WF of 21.96 L/cycle. Compact dishwashers must have a maximum TAEC of 234 kWh/year and a maximum WF of 15.14 L/cycle. Standard dishwashers must exceed the minimum federal standard in Canada's Regulations by at least 9 percent. Compact dishwashers must be at least 10 percent more efficient. Many ENERGY STAR labelled dishwashers use "smart sensors"

APPLIANCES

that adjust the wash cycle and the amount of water to match how much cleaning the dishes need. They may also have an internal heater to boost the temperature of incoming water.

- ▶ Dehumidifiers must have an energy factor (EF) of 1.2 to 2.5 litres/kWh, depending on its water removal capacity. The higher the EF, the more energy efficient the unit.
- ▶ Water coolers that dispense cold water only or cold and room-temperature water must have a standby energy consumption of no more than 0.16 kWh per day. (Standby energy refers to the energy required to maintain the water at an appropriate dispensing temperature.) Water coolers that dispense hot and cold water must have a standby energy consumption of no more than 1.20 kWh per day.

Appliance manufacturers who are not already enrolled in the ENERGY STAR program in the United States and who wish to use the ENERGY STAR symbol in Canada must sign an administrative arrangement with Natural Resources Canada's (NRCAN's) Office of Energy Efficiency (OEE) and certify that the product or products to be labelled meet ENERGY STAR specifications. Manufacturers of ENERGY STAR labelled products that qualify in Canada and those who are enrolled in the U.S. ENERGY STAR program must supply NRCAN with a Canadian contact if they wish to benefit from NRCAN's marketing and promotional activities.

Availability of ENERGY STAR labelled appliances

Many appliances sold in Canada show the ENERGY STAR symbol on the product, on its packaging or in its literature. The *EnerGuide Appliance Directory* also lists products that have high efficiency levels. The directory is available on the OEE's Web site or through the toll-free publications line (see contact information at right).

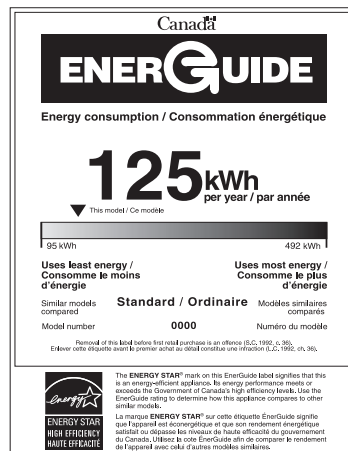

ENERGY STAR and EnerGuide

ENERGY STAR is promoted in conjunction with Canada's EnerGuide rating system for appliances, whose goal is to help consumers save money and help the environment.

Although the EnerGuide label provides buyers with the information they need to compare the energy consumption of different products, ENERGY STAR goes a step further by identifying the most energy-efficient models on the market. In some cases (e.g. refrigerators), the ENERGY STAR symbol may appear on the EnerGuide label.

For more information on ENERGY STAR in Canada, visit the Web site at energystar.nrcan.gc.ca, or to order ENERGY STAR publications, call the publications line at 1-800-387-2000 (toll-free).
