Under the authority of the *Pest Control Products Act*, Health Canada's Pest Management Regulatory Agency (PMRA) has re-evaluated the human health and environmental risks as well as the value of tefluthrin and has approved continued registration of products containing tefluthrin for sale and use in Canada on corn.

Corresponding maximum residue limits (MRLs) for field and sweet corn were identified in Proposed Maximum Residue Limit PMRL2010-12, *Tefluthrin*, published on 24 February 2010. The PMRL referenced the MRL consultation conducted under Proposed Re-registration Decision PRVD2010-01, *Tefluthrin*, also published on 24 February 2010. The PMRA received no comments in response to the consultation under PRVD2010-01.

To comply with Canada's international trade obligations, consultation on the proposed MRLs was also conducted internationally by notifying the World Trade Organization, as coordinated by the Standards Council of Canada. No comments were received as a result of the World Trade Organization consultation.

The following MRLs take legal effect as of the publication date of this document and are in addition to the MRL already established for tefluthrin in milk.

Established Maximum Residue Limits for Tefluthrin

Common Name	Residue Definition	MRL (ppm)	Food Commodity
Tefluthrin	2,3,5,6-tetrafluoro-4-methylbenzyl (Z)-(1RS)-cis-3-(2-chloro-3,3,3-trifluoroprop-1-enyl)-2,2-dimethylcyclopropanecarboxylate, including the metabolite (Z)-3-(2-chloro-3,3,3-trifluoro-1-propenyl)-2,2-dimethylcyclopropanecarboxylic acid	0.06	Field corn, sweet corn kernels plus cob with husks removed

A complete list of all MRLs established in Canada can be found on the Maximum Residue Limits for Pesticides webpage in the Pesticides and Pest Management section of Health Canada's website.
