Under the authority of the *Pest Control Products Act*, Health Canada's Pest Management Regulatory Agency (PMRA) has established maximum residue limits (MRLs) for flufenacet on sweet corn and wheat to permit the import and sale of foods containing such residues.

Corresponding MRLs were proposed in the consultation document published on 26 November 2010, Proposed Maximum Residue Limit PMRL2010-80, *Flufenacet*. The PMRA received no comments in response to this consultation.

To comply with Canada's international trade obligations, consultation on the proposed MRLs was also conducted internationally by notifying the World Trade Organization, as coordinated by the Standards Council of Canada. No comments were received as a result of the World Trade Organization consultation.

The following MRLs take legal effect as of the publication date of this document and are in addition to the MRLs already established for flufenacet.

Established Maximum Residue Limits for Flufenacet

Common Name	Residue Definition	MRL (ppm)	Food Commodity
Flufenacet	<i>N</i> -(4-fluorophenyl)- <i>N</i> -(1-methylethyl)-2-[[5-(trifluoromethyl)-1,3,4-thiadiazol-2-yl]oxy]acetamide, including metabolites containing the 4-fluoro- <i>N</i> -methylethyl benzenamine moiety*	0.8	Wheat bran
		0.6	Wheat
		0.05	Sweet corn kernels plus cob with husks removed

* The previous residue definition for all MRLs established on dry soybeans, field corn and livestock commodities included flufenacet only. The residue definition for all commodities with flufenacet MRLs is revised to include metabolites in accordance with the above table.

A complete list of all pesticide MRLs established in Canada can be found on the Maximum Residue Limits for Pesticides webpage in the Pesticides and Pest Management section of Health Canada's website.
