Under the authority of the *Pest Control Products Act*, Health Canada's Pest Management Regulatory Agency (PMRA) has established maximum residue limits (MRLs) for phenmedipham in or on garden beets, sugar beets and spinach to permit the import and sale of foods containing such residues.

Corresponding MRLs were proposed in the consultation document published on 24 November 2010, Proposed Maximum Residue Limit PMRL2010-72, *Phenmedipham*. The PMRA received no comments in response to this consultation.

To comply with Canada's international trade obligations, consultation on the proposed MRLs was also conducted internationally by notifying the World Trade Organization, as coordinated by the Standards Council of Canada. No comments were received as a result of the World Trade Organization consultation.

The following MRLs take legal effect as of the publication date of this document and either replace or are in addition to the MRL already established for phenmedipham.

Established Maximum Residue Limits for Phenmedipham

Common Name	Residue Definition	MRL (ppm)	Food Commodity
Phenmedipham	3-[(methoxycarbonyl)amino]phenyl (3-methylphenyl)carbamate	4.0	Spinach
		0.2	Garden beet roots, garden beet tops, sugar beet molasses
		0.1	Sugar beet roots*

* Replaces the 0.05 ppm MRL previously established for sugar beet roots on 26 November 2009.

A complete list of all pesticide MRLs established in Canada can be found on the Maximum Residue Limits for Pesticides webpage in the Pesticides and Pest Management section of Health Canada's website.
