

2006 Census Housing Series: Issue 11—Off-reserve Non-Status Indian Households: Housing Conditions and Core Housing Need

INTRODUCTION

This Research Highlight examines the housing conditions of off-reserve Non-Status Indian households (see text box: Definitions of Non-Status Indian and Aboriginal households) in Canada based on custom data from the 2006 Census.

Housing conditions are assessed using CMHC's measures of acceptable housing and core housing need (see text box: Acceptable Housing and Core Housing Need). Household characteristics and housing conditions of off-reserve Non-Status Indians at the national, provincial, and territorial level for owners and renters are examined.

The universe of households¹ tested for core housing need includes only private non-farm, non-band, non-reserve households with incomes greater than zero and shelter-cost-to-income ratios (STIRs) less than 100%. Shelter costs for farm households are not separable from costs related to other farm structures. Shelter costs are not collected for households whose housing costs are paid through band housing arrangements (both on- and off-reserve). Additionally, STIRs for households with income less than or equal to zero, or STIRs that are equal to or greater than 100% are considered uninterpretable by CMHC for the purpose of measuring affordability.

The 2006 Census identified 12.4 million households in Canada, of which 11.8 million were private non-farm, non-band, off-reserve households reporting positive incomes and with shelter cost-to-income ratios (STIRs) less than 100%. Among the 11.8 million such households, 401,145 were Aboriginal households including 156,235 Status

Definitions of Non-Status Indian and Aboriginal households

- A **Non-Status Indian** household is any Aboriginal household in which at least one member reported being a Non-Status Indian. A Non-Status Indian is either of the following:
 - i) a person who reported being a North American Indian, but did not report being a Treaty Indian or a Registered Indian; or
 - ii) a person who reported being a member of an Indian Band or First Nation, but did not report being a Treaty Indian or a Registered Indian and did not report identifying with any of the three identity groups (i.e., North American Indian, Métis, or Inuit).

The definition of Non-Status Indian excludes band members who did not report being North American Indian but who did report being Métis and/or Inuit.

- An **Aboriginal household** is any household in which at least one spouse, common-law partner, or lone parent self-identified as Aboriginal, or in which at least 50 per cent of household members self-identified as Aboriginal. If any member of the family households identified as Indian (Status or Non-Status), Métis, or Inuit, then the household is classified accordingly. There are cases where two or more identity groups are represented in the same household. For example, a household with one Métis, and one Inuit spouse will be counted as both Métis and as an Inuit household. As a result, the sum of the identity subtotals will add to more than the total of all Aboriginal households.

¹ According to Statistics Canada's 2006 Census Dictionary, a household comprises a person or a group of persons who occupy the same dwelling and do not have a usual place of residence elsewhere in Canada.

Acceptable Housing and Core Housing Need

The term **acceptable housing** refers to housing that is adequate in condition, suitable in size, and affordable.

- **Adequate** housing does not require any major repairs, according to residents.
- **Suitable** housing has enough bedrooms for the size and make-up of resident households, according to National Occupancy Standard (NOS) requirements. Enough bedrooms based on NOS requirements means one bedroom for each cohabiting adult couple; unattached household member 18 years of age and over; same-sex pair of children under age 18; and additional boy or girl in the family, unless there are two opposite sex children under 5 years of age, in which case they are expected to share a bedroom. A household of one individual can occupy a bachelor unit (i.e., a unit with no bedroom).
- **Affordable** housing costs less than 30 per cent of before-tax household income. For renters, shelter costs include rent and any payments for electricity, fuel, water and other municipal services. For owners, shelter costs include mortgage payments (principal and interest), property taxes, and any condominium fees, along with payments for electricity, fuel, water and other municipal services.

A household is in **core housing need** if its housing does not meet one or more of the adequacy, suitability or affordability standards and it would have to spend 30 per cent or more of its before-tax income to pay the median rent of alternative local market housing that meets all three standards.

Indians, 78,005 Non-Status Indians, 204,845 Métis, and 15,950 Inuit. This Research Highlight examines the housing conditions and household characteristics of the 78,005 off-reserve Non-Status Indian households².

Off-reserve Non-Status Indian households are growing at a faster rate than non-Aboriginal households.

The number of off-reserve Non-Status Indian households increased about 70% from 45,820 in 1996 to 78,005 in 2006 (see Table 1). This was a faster rate of growth than for non-Aboriginal households which grew by 16% over this period. Off-reserve Non-Status Indian households accounted for 0.6% of all off-reserve Canadian households in 2006.

Between 2001 and 2006, off-reserve Non-Status Indian household growth rates were positive for all provinces and territories, except Yukon (see Table 2). Quebec recorded the strongest percentage growth at 109%.

The highest percentages of off-reserve Non-Status Indian households lived in Ontario (36%), British Columbia (20%), Quebec (15%), and Alberta (11%). The great majority (76%) of off-reserve Non-Status Indian households lived in urban areas consisting of census metropolitan areas (CMAs) and census agglomerations (CAs)³ (see Figure 1). About 44,000 or 56% of off-reserve Non-Status Indian households were located in Canada's 33 CMAs alone. Among CMAs, Toronto had the highest number of off-reserve Non-Status Indian households with 5,590, followed by Vancouver (4,710), Montreal (4,275), Ottawa - Gatineau (3,895), Edmonton (2,725) and Winnipeg (2,280).

Table 1 Off-reserve households*, Canada, 1996–2006

	1996	2001	2006	% Change 1996-2001	% Change 2001-2006	% Change 1996-2006
All	10,027,840	10,805,615	11,766,145	7.8	8.9	17.3
Aboriginal†	218,310	297,285	401,145	36.2	34.9	83.8
Non-Status Indian	45,820	57,340	78,005	25.1	36.0	70.2
Non-Aboriginal	9,809,525	10,508,330	11,365,000	7.1	8.2	15.9

* Includes private non-farm, non-band, off-reserve households reporting positive incomes and with shelter cost-to-income ratios (STIRs) less than 100%.

† Some of the growth was due to an increased tendency to self-identify as a member of the group.

Source: CMHC (Census-based housing indicators data).

² In 2006, there were also 1,495 Non-Status Indians living on reserve whose housing conditions are not discussed in this Research Highlight.

³ Census Metropolitan Areas consist of one or more adjacent municipalities situated around a major urban core with a population of at least 50,000. Prior to 2006, the threshold to be a CMA was an urban core with a population of at least 100,000. Census Agglomerations consist of one or more adjacent municipalities situated around a major urban core with a population of at least 10,000.

Table 2 Off-reserve Non-Status Indian households*, Canada, Provinces and Territories, 2001–2006

	2001	2006	Change between 2001 and 2006	% Change between 2001 and 2006	% Share of the increase between 2001 and 2006
Newfoundland and Labrador	2,015	2,980	965	47.9	4.7

* Includes private non-farm, non-band, off-reserve households reporting positive incomes and with shelter cost-to-income ratios (STIRs) less than 100%.
Figures may not add due to rounding.

Source: CMHC (Census-based housing indicators data).

The proportions of urban households which were off-reserve Non-Status Indian households varied across CMAs and CAs (see Figure 2). Prince Rupert, a CA in British Columbia, had the highest proportion of off-reserve Non-Status Indian households at 5.5%, and Abbotsford had the largest proportion of any CMA, at 1.6%.

Urban off-reserve Non-Status Indian households generally were relatively young. In 2006, among households living in urban areas (CMAs and CAs), a higher proportion (22%) of off-reserve Non-Status Indian urban households had a household maintainer⁴ in the age group 15–34 years than did non-Aboriginal (15%) urban households.

In 2006, 80% of off-reserve Non-Status Indian households lived in family households (see Table 3). About 18% were single-parent households, compared to 10% for non-Aboriginal households. The great majority (82%) of off-reserve Non-Status Indian single-parent households were female-led households.

Table 3 Off-reserve households* by household type⁵ Canada, 2006

Household type	Non-Status Indian households		Non-Aboriginal households %
	#	%	
Total	78,005	100	100
Family	62,715	80.4	70.1
One-family	60,355	77.4	68.3
Couples without children	17,770	22.8	26.6
Couples with children	28,855	37.0	31.8
Lone-parent	13,730	17.6	9.9
Lone-parent male	2,430	3.1	1.9
Lone-parent female	11,305	14.5	8.0
Multiple-family	2,360	3.0	1.8
Non-family	15,290	19.6	29.9
One-person	11,505	14.7	26.3
Male one-person	6,010	7.7	11.5
Female one-person	5,495	7.0	14.8
Two or more person	3,785	4.9	3.6

* Includes private non-farm, non-band, off-reserve households reporting positive incomes and with shelter cost-to-income ratios (STIRs) less than 100%.
Figures may not add due to rounding.

Source: CMHC (Census-based housing indicators data).

⁴ Statistics Canada defines a household maintainer as “the person or persons in the household who pay the rent, or the mortgage, or the taxes, or the electricity, etc., for the dwelling.”

⁵ Households are divided into two subcategories: family households and non-family households. A family household is a household that contains at least one Census family. A Census family consists of a couple or parents and their children living in the same address. A one-family household consists of a single family (e.g., a couple with or without children). A multiple-family household is made up of two or more families (with or without additional non-family persons) occupying the same private dwelling. A non-family household consists either of one person living alone or of two or more people who share a private dwelling but who do not constitute a family.

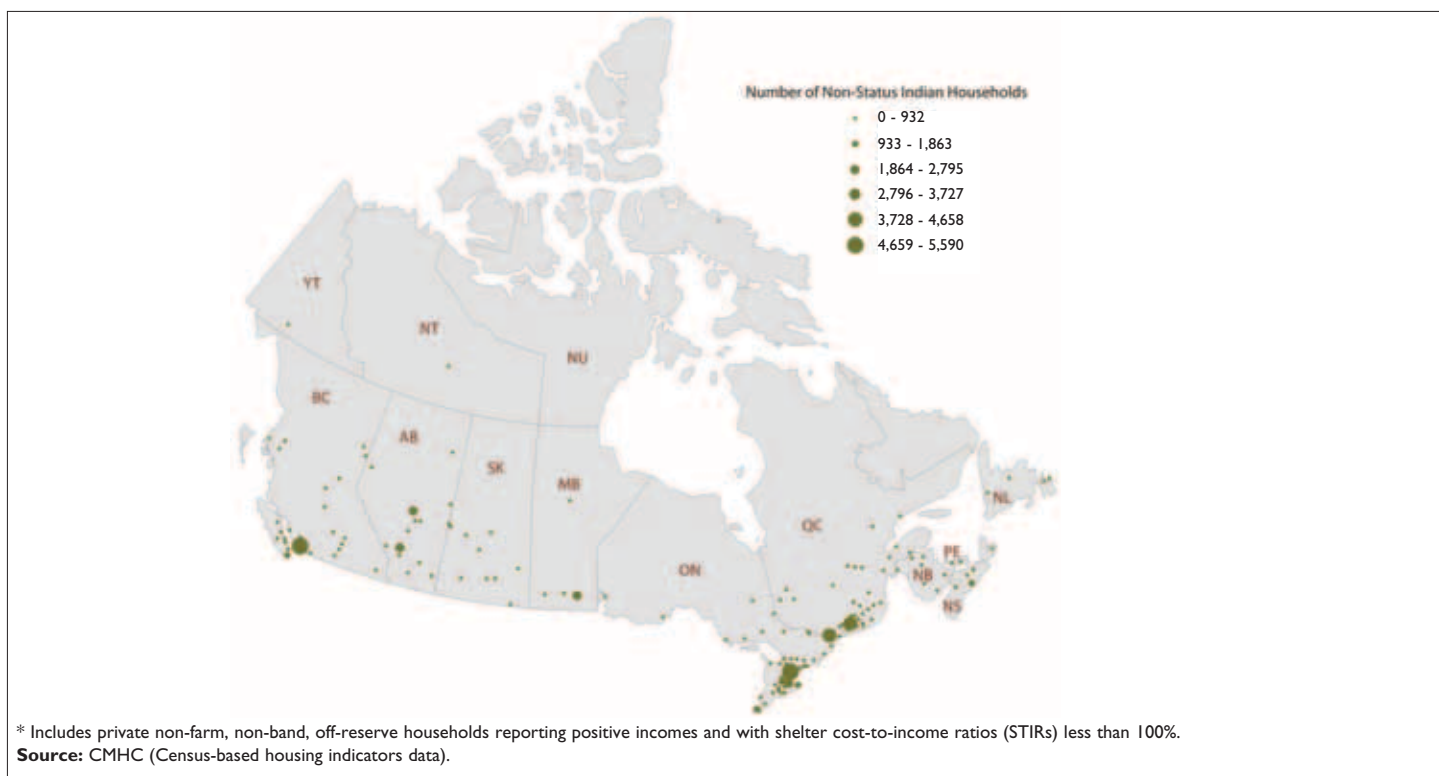

Figure 1 Distribution of urban off-reserve Non-Status Indian households*, Canada, 2006

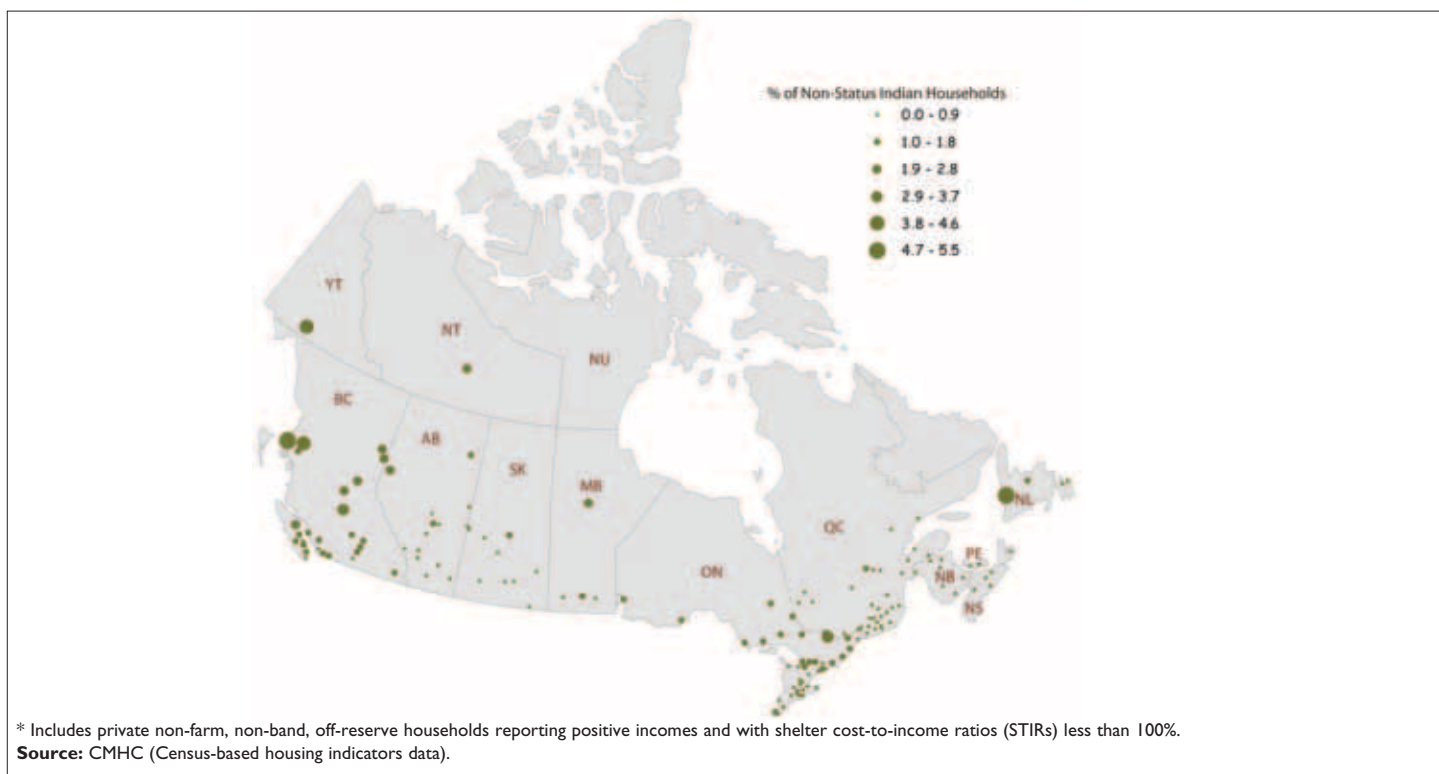

Figure 2 Proportions of urban households which were off-reserve Non-Status Indian households*, Canada, 2006

Homeownership rate among off-reserve Non-Status Indian households increasing, but lower than for non-Aboriginal households

In 2006, 55% of off-reserve Non-Status Indian households owned a home, compared to 50% in 2001 and to 70% of non-Aboriginal households. In 2006, 15% (or 11,970) of off-reserve Non-Status Indian households owned their home outright (without a mortgage), compared to 30% of non-Aboriginal households.

Off-reserve Non-Status Indian households in Newfoundland and Labrador have the highest rates of homeownership, at 79%; those in Saskatchewan and Manitoba the lowest, at 44% (see Table 4).

Table 4 Homeownership rates of off-reserve Non-Status Indian households*, Canada, Provinces and Territories, 2006

	Total Households	Owner Households	Ownership Rate (%)
Canada	78,005	42,585	54.6
Newfoundland and Labrador	2,980	2,360	79.2

Northwest Territories	435	215	49.4
Nunavut	**	**	**

* Includes private non-farm, non-band, off-reserve households reporting positive incomes and with shelter cost-to-income ratios (STIRs) less than 100%.

** Estimates of housing conditions are not provided where there are fewer than 100 households in total.

Figures may not add due to rounding.

Source: CMHC (Census-based housing indicators data).

Housing conditions of off-reserve Non-Status Indians continued to improve

In 2006, 57.7% of off-reserve Non-Status Indian households lived in dwellings that met all three housing standards

(i.e., adequacy, suitability, and affordability), up from 55.1% in 2001 (see Figure 3). Affordability was a problem for 27% of off-reserve Non-Status Indian households, crowded housing conditions for 10%, and inadequacy for 14%⁶.

Off-reserve Non-Status Indian households experienced a decrease in the incidence of core housing need of 9.6 percentage points, from 29.9% per cent in 1996 to 20.3% in 2006. Between 2001 and 2006, the incidence of core housing need for off-reserve Non-Status Indian households declined by 3.4 percentage points from 23.7% to 20.3%, much more than the 1.1 percentage point decline for non-Aboriginal households (see Figure 4). However, the incidence of core housing need for off-reserve Non-Status Indians in 2006 at 20.3% remained higher than that of non-Aboriginal households (at 12.4%).

Although 42% of off-reserve Non-Status Indian households lived below one or more of the housing standards in 2006, about 22 percentage points of these households had the income capacity to obtain acceptable housing. When these latter households are combined with those living above standards (58%), about 80% of off-reserve Non-Status Indian households either lived in, or had sufficient income to access, acceptable housing in 2006, compared to 76% in 2001, and to 88% for non-Aboriginal households in 2006.

Despite the decrease in the incidence of core housing need for off-reserve Non-Status Indians between 2001 and 2006, the number of households in core housing need increased by about 2,270 households during this period. This increase may be attributed to the 36% growth in the total number of off-reserve Non-Status Indian households between 2001 and 2006.

Between 2001 and 2006, all the provinces (except Alberta) and territories (estimates are not available for PEI and Nunavut) experienced improvements in the incidence of core housing need of off-reserve Non-Status Indian households (see Table 5). In 2006, the range was from 13.6% in Quebec to 27.3% in Saskatchewan (see Appendix Table 1 for detailed geographic data by tenure).

Between 2001 and 2006, the incidence of core housing need of off-reserve Non-Status Indian households increased by 0.6 percentage points in Alberta. New Brunswick and

⁶ These do not add to 42.3% since some households fall below more than one housing standard.

Nova Scotia experienced decreases in core housing need of 7.4 and 7.2 percentage points, respectively; all other provinces and territories for which estimates are available experienced smaller decreases (see Table 5).

In all provinces and territories, more off-reserve Non-Status Indian renter households were in core housing need than owner households. Yukon had the highest incidence of renter households in core need (45%); the Northwest Territories recorded the lowest incidence at 23.3%. Between 2001 and 2006, the incidence of core housing need declined for off-reserve Non-Status Indian owner households in all provinces and territories, except Alberta (see Table 5).

In 2006, about 35% of off-reserve Non-Status Indian renter households and 8% of owner households were in core housing need, compared to about 27% of non-Aboriginal renter households and 6% of non-Aboriginal owner households (see Table 6). Renter households have greater difficulty finding acceptable housing than homeowners mostly because of lower household income (see Table 7).

Affordability, suitability, and adequacy of housing occupied by off-reserve Non-Status Indian households in core housing need

For off-reserve Non-Status Indian households, as with non-Aboriginal households, unaffordable housing is a far more common reason for being in core housing need than housing that is unsuitable (i.e., crowded) or inadequate (i.e., in need of major repairs). About 17% of off-reserve Non-Status Indian households were in core housing need and failed to meet the affordability standard either alone or in combination with another standard, and 3.3%⁷ were in core housing need who met the affordability standard but were below suitability and/or adequacy standards (see Appendix Table 2 for data by tenure).

Over the ten year period from 1996 to 2006, the proportion of off-reserve Non-Status Indian households falling into core housing need due to affordability problems declined from 25.2% to 17.0% (see Figure 3).

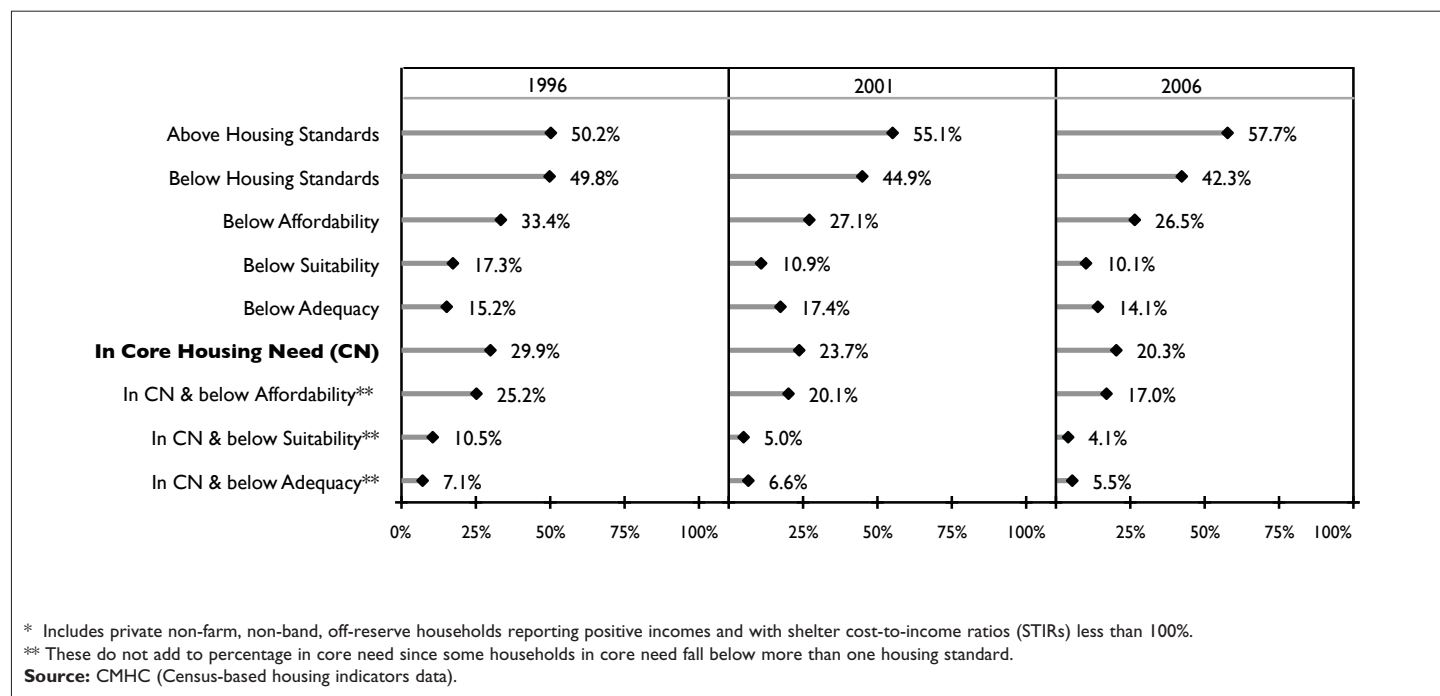

Figure 3 Housing conditions of off-reserve Non-Status Indian households*, Canada, 1996–2006

⁷ 3.3% is the difference between the 20.3% of off-reserve Non-Status Indian households in core housing need, and the 17.0% in core housing need and below the affordability standard (see Table 6).

In 2006, the average shelter cost-to-income ratio (STIR) for off-reserve Non-Status Indian households in core housing need was 46.3% compared to 49.0% for non-Aboriginal households in core housing need (see Table 7).

While affordability is affected by both shelter costs and income, lower average household income is the reason for affordability problems among off-reserve Non-Status Indian households in core housing need; they reported \$20,326 in before-tax income, only 29% of the \$69,752 reported by off-reserve Non-Status Indian households not in core housing need (see Appendix Table 3 for detailed geographic data by tenure). About 63% of the off-reserve Non-Status Indian households in core housing need relied on Government transfer payments for income.

Between 2001 and 2006, the average household income of off-reserve Non-Status Indian households in core housing need increased by 15.5% while the average shelter costs rose by 14.7%.

For off-reserve Non-Status Indian households, young lone-parent households had a relatively higher incidence of core housing need

For off-reserve Non-Status Indian family households, the incidence of core housing need was 44.3% for lone-parent households in 2006 and 60% of off-reserve Non-Status Indian lone-parent households in the age group 15-34 years were in core housing need and faced severe affordability problems. The incidences of core need for those that were not in the labour force and those that were unemployed were about 70% and 73%, respectively. The incidence of core need for off-reserve Non-Status Indian lone-parent households varied from 66.7% in Yukon to 25.6% in Quebec (see Figure 5).

About 10.3% of off-reserve Non-Status Indian couple households were in core need.

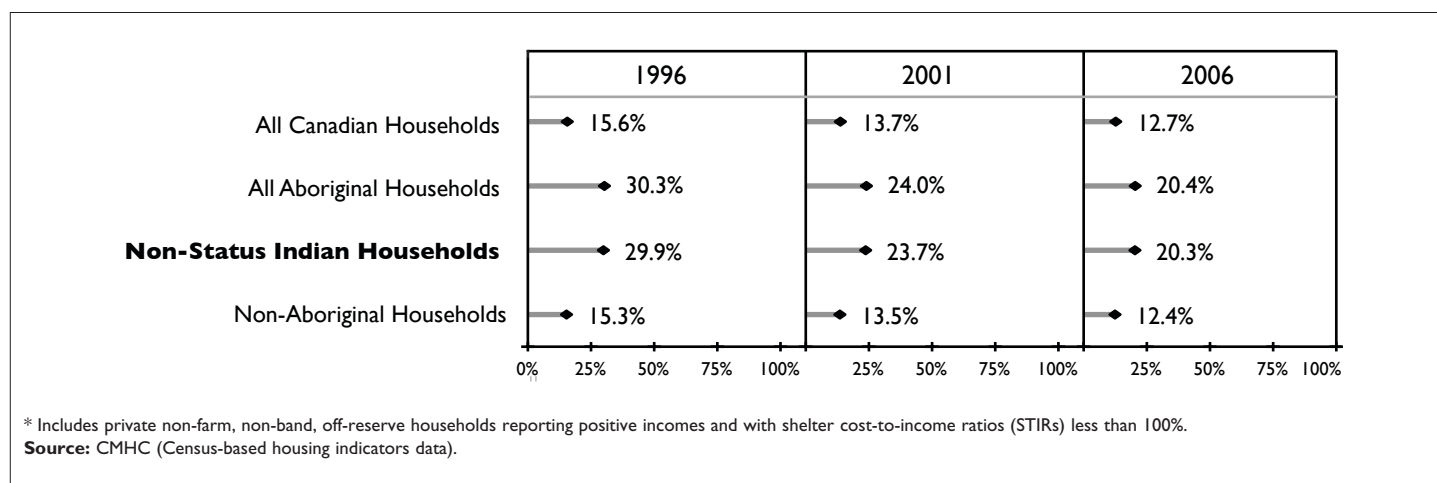

Figure 4 Core housing need, off-reserve Non-Status Indian households* and other households, Canada, 1996–2006

* Includes private non-farm, non-band, off-reserve households reporting positive incomes and with shelter cost-to-income ratios (STIRs) less than 100%.

Source: CMHC (Census-based housing indicators data).

The incidence of core housing need for off-reserve Non-Status Indian multifamily households in 2006 was 13.1%.

For off-reserve Non-Status Indian households, the highest incidence of core housing need among all household structure types was recorded for renter lone-parent family households, at 54.7% (see Appendix Table 4 for detailed geographic data by tenure).

Housing conditions of off-reserve Non-Status Indian households in Census Metropolitan Areas

In 2006, the incidence of core housing need at 21.7% for off-reserve Non-Status Indian households in CMAs was down from 24.6% in 2001 (see Table 8). The percentage of off-reserve Non-Status Indian households living in core housing need varied from 31.0% in Moncton to 12.2% in Kelowna (see Appendix Table 5 for detailed geographic data by tenure).

SUMMARY

In 2006, about 20.3% of off-reserve Non-Status Indian households were in core housing need, compared to 12.4% of non-Aboriginal households. The incidence of core housing need among off-reserve Non-Status Indian households improved by 3.4 percentage points between 2001 and 2006, and 9.6 percentage points between 1996 and 2006.

The incidence of core housing need for off-reserve Non-Status Indian households was highest in Saskatchewan and Manitoba, at about 44%, each.

For off-reserve Non-Status Indian households, as for all Canadian households, unaffordable housing was the most common reason for falling into core housing need; however, crowding and dwellings in need of major repairs continue to be experienced relatively more often by off-reserve Non-Status Indians households than by non-Aboriginal households.

In general, off-reserve Non-Status Indian households had lower average household incomes and homeownership rates relative to non-Aboriginal households, although this gap narrowed somewhat between 2001 and 2006. About 55% of off-reserve Non-Status Indian households own their homes.

As with non-Aboriginal households, off-reserve Non-Status Indian renter households were more likely to be in core housing need (35%) than were owner households (8%).

Among different household types, the incidence of core housing need was highest among lone-parent off-reserve Non-Status Indian households (at 44.3%).
