HOUSING MARKET INFORMATION

HOUSING NOW Saguenay CMA

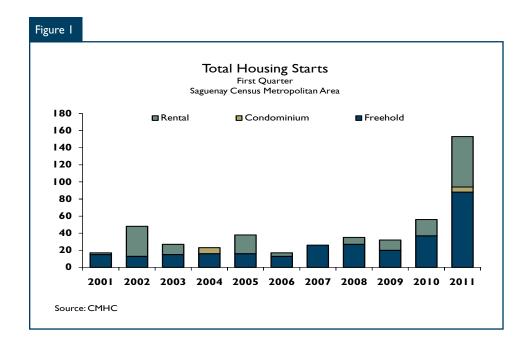

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Second Quarter 2011

New Home Market

According to the latest data released by Canada Mortgage and Housing Corporation (CMHC), 153 housing units were started in the Saguenay census metropolitan area (CMA) from January to March 2011. This was an exceptionally high level, compared to the 56 starts recorded during the same period last year.

All market segments posted gains. In the case of freehold homes¹, 84 new units were enumerated in the first quarter of 2011, compared to 23 during the same period in 2010. The rental housing segment also registered a strong increase, as 59 starts of this type were noted, versus 19 in the first three months of 2010. However, the growth was more modest for condominiums, with 6 new units from

¹ Freehold homes refer to dwellings where the owner also holds the title of ownership to the land (single-detached, semi-detached and row houses, as well as duplexes).

January to March 2011, while there had been none during the first quarter of 2010.

The magnitude of this hike was mainly due to a rare delay between the actual housing starts and the enumeration. For this reason, the data for a number of new units that got under way at the end of 2010 were compiled in January 2011. It is estimated that, even without this delay, residential construction would have still posted an increase. Housing demand in the Saguenay area was therefore more vigorous than expected at the end of 2010 and in the first quarter of 2011.

Overall, economic conditions remained favourable to the housing market, as many public and private investments supported employment in the area (despite losses in the manufacturing sector), mortgage interest rates stayed low, and the area's greater ability to retain its residents stimulated housing demand. While it looks like 2001 will be another very active year in the Saguenay area, housing demand is expected to soften by 2012.

Among the Lac-Saint-Jean urban centres, Alma and Saint-Félicien registered changes in their levels of housing activity between the first quarters of 2010 and 2011, while Roberval and Dolbeau-Mistassini showed little movement. In Alma, the decrease in the rental segment was mainly attributable to the start of construction on a large number of units for seniors last year. In Saint-Félicien, the addition of new rental

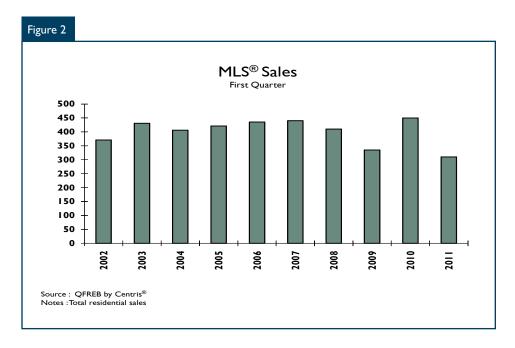

units fuelled housing activity during the first three months of this year.

Resale Market

According to data from the Ouebec Federation of Real Estate Boards (OFREB), MLS® residential transactions registered a significant decrease between the first quarters of 2010 and 2011, falling from 429 to just 310 sales. This was the lowest level of activity in the last ten years. This drop may have been partly due to the many homes bought last year, when a number of households moved up their purchases to take advantage of the more favourable financing conditions. In addition, some buyers no doubt opted for a new home over an existing one, on account of the smaller price difference between the two than a few years ago.

Active listings fell slightly between the first quarters of 2010 and 2011. Even with this decrease in supply, market conditions eased in the area. The seller-to-buyer ratio reached 6.5 to 1* this past quarter, up from 5.5 to 1 a year earlier. While the market continued to favour sellers, the softer conditions lessened the pressure on prices. The average price of residential properties was just above the \$170,000 mark, for an annual gain of 8.1 per cent, while this growth rate was over 10 per cent the previous quarter.

The market eased for all housing types. Still, conditions remained favourable to sellers in the case of single-family houses and plexes. Buyers paid an average of nearly \$185,000 to buy a plex during the first quarter of 2011, up by more than 10 per

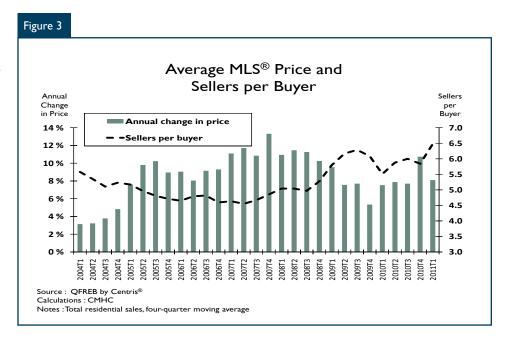

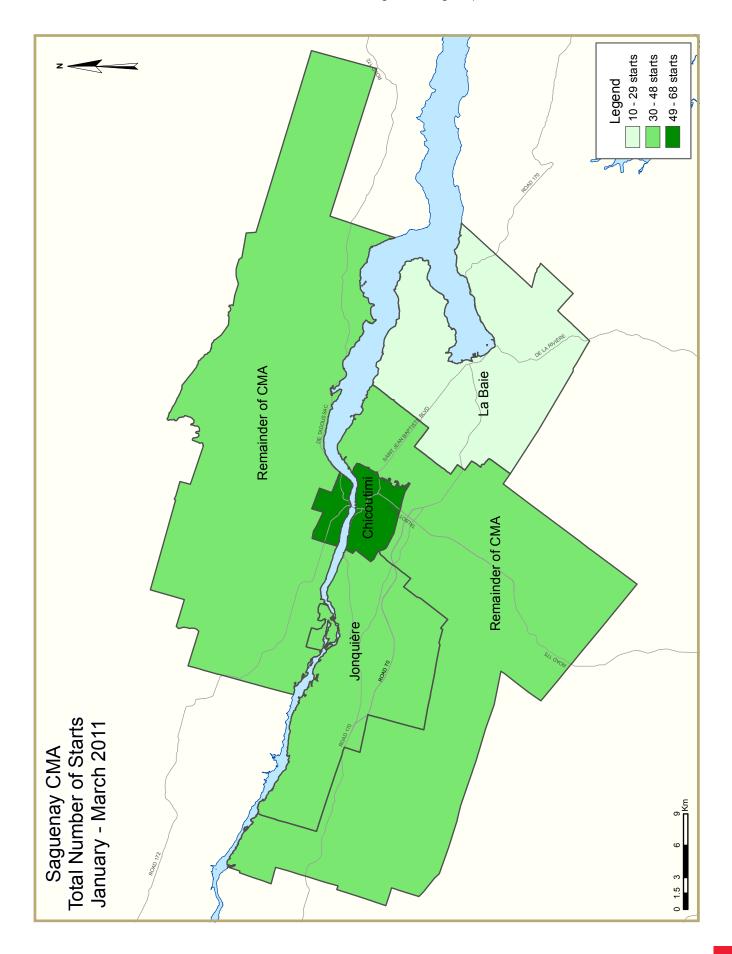

^{*} Average for the last four quarters.

cent over the same period in 2010. In the condominium segment, higher inventories pushed the market into buyer's territory, as the seller-to-buyer ratio climbed from 9.2 to 1* in March 2010 to 11.0 to 1 a year later.

It has to be noted that the resale market was less active than anticipated, but this difference with our forecasts should be temporary. We still expect that three factors will combine to progressively cool housing demand in the area: the end of earlier-than-planned purchases, the anticipated increase in mortgage interest rates and a slower pace of household formation.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
