

Date Released: Spring 2011

*Only centres with a population of 10,000 + are included in the survey.

Highlights

- The Ontario average vacancy rate declined to 2.5 per cent in April 2011, down from 3.4 per cent in the spring of 2010
- Vacancy rates dropped most in less expensive ownership markets
- Fixed sample two-bed apartment rents grew at a faster rate of 1.9 per cent this spring, compared to 1.3 per cent in April 2010
- Notable factors exerting downward pressure on vacancy rates include: improving economic conditions for Ontario residents aged 25 and older declining first time buyer demand and stronger immigration
- Notable factors exerting upward pressure on vacancy rates include: weak youth job markets and increasing rental and ownership completions

Ontario Rental Vacancy Rates Move Lower in April 2011

According to Canada Mortgage and Housing Corporation's (CMHC) Spring 2011 Rental Market Survey, Ontario vacancy rates declined to an average of 2.5 per cent in April 2011, down from 3.4 per cent in the spring of 2010. Vacancy rates moved lower for all bedroom types particularly less expensive bachelor units as these units compete less with new ownership completions.

Factors Exerting Downward Pressure on Vacancy Rates

Canada's economic recovery has been led by the goods sector. Canada's industrial heartland - Ontario - has benefited from this as unemployment rates moved lower helping support rental demand. While young adults have a higher propensity to rent, households over the ages of 25 represent a larger pool of renter households. Improving economic conditions and incomes among Ontario residents older than 25 years helped to halt migratory outflows in traditional goods producing economies such as Windsor, Oshawa and St. Catharines-Niagara. Meanwhile, Northern Ontario communities also benefited from an improving goods sector. As rising commodity prices boosted mining related activities, demand for labour and rental housing accommodation increased. This placed downward pressure on vacancy rates.

Although they were impacted by the same factors previously mentioned, pricier southern Ontario ownership markets created competitive headwinds for existing conventional rental structures. First time buyers trying to avoid higher mortgage carrying costs brought their decision to purchase a home forward, particularly in more expensive markets. This helped explain why Toronto, Hamilton and Ottawa saw less downward movement in vacancy

rates this spring relative to other urban centres.

While general economic conditions highlighted above influence rental markets locally, a number of other factors have increased rental demand and exerted downward pressure on vacancy rates at a provincial level. Firstly, the prospects of new mortgage rules taking effect in March of 2011 and higher interest rates likely brought some home purchases forward, particularly into the fourth quarter of last year. Less pent up ownership demand and fewer first time buyers in the market meant fewer tenants likely vacated their rental suites during the first quarter of 2011. Consequently, with fewer renter households shifting from renting to owning a home - vacancy rates moved lower this spring.

A second factor exerting upward pressure on rental demand and downward pressure on vacancy rates was Ontario's immigration story. Immigration into Ontario has been moving higher over the past year. A global economic recovery led to less uncertainty and likely encouraged more international travel. Immigrants typically lack the savings and work experience to qualify for homeownership. Approximately 75 per cent of immigrants opt for rental accommodation when first arriving in Canada.

Factors Exerting Upward Pressure on Vacancy Rates

Other factors however, worked to dampen rental demand and put upward pressure on apartment vacancy rates. A notable factor is the youth employment story. While representing a smaller number of renter households, young adults are more likely to rent. Young Ontario adults between the ages of 18 to 25 have been adversely impacted by the recent downturn. Despite the economic recovery, employment levels for young adults are still well below prerecession levels. Fewer job prospects for

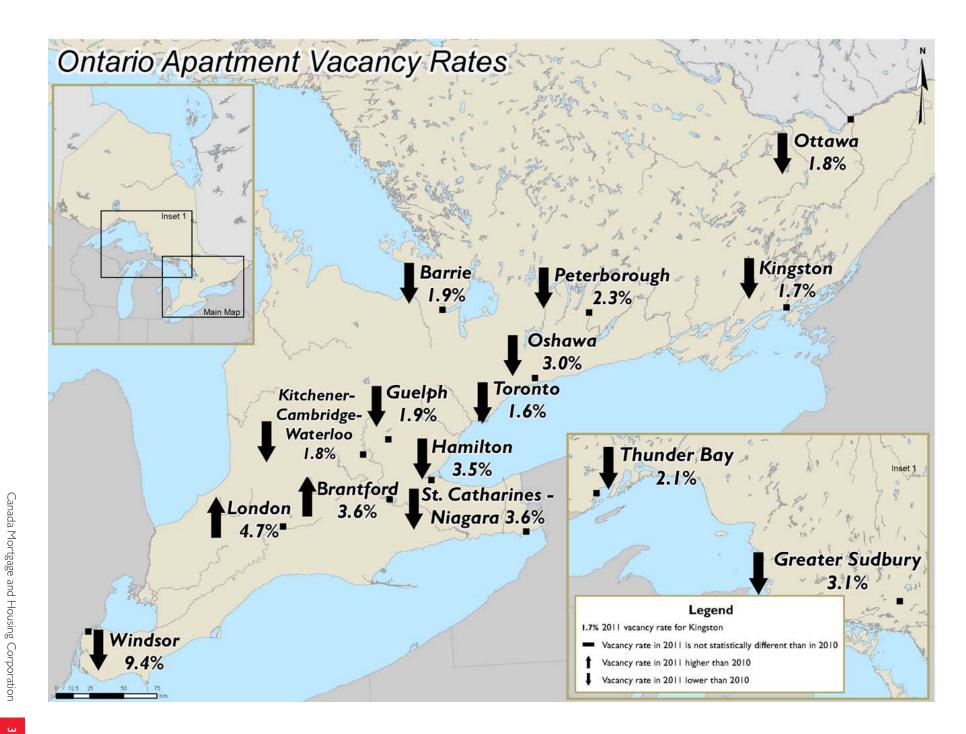

younger Ontarians dampened the rate of household formation and rental demand among this age cohort.

Another factor exerting downward pressure on rental demand and upward pressure on vacancy rates is the condo market. Condominiums represent a relatively less expensive homeownership option for first time buyers, particularly during a period of rising mortgage carrying costs. Condo sales hit new records in recent years and projects have reached the completion phase in the last six months. Some first time buyers are renter households and, as they took occupancy of their recently completed units, had to vacate their existing rental units. This exerted upward pressure on vacancy rates.

On the supply side, higher condominium and conventional rental completions created competitive headwinds for existing rental accommodation. While condo developers have been targeting first time buyers, a push to sell to investors has gained prominence over the last several years. Condominiums are a form of competing rental supply for the higher end primary rental segment as investors subsequently lease these units out to prospective tenants. In addition, more conventional rental completions, particularly in markets such as London and Kingston, meant more competition to retain and attract tenants - exerting upward pressure on vacancies. On net, with the exception of the London and Brantford markets, demand pressures were strong enough to offset increasing headwinds from new supply - resulting in lower vacancy rates across most major Ontario markets.

Vacancy Rate Impact on Rents

Tighter rental apartment conditions helped push rents higher. Apartment rents for 2-bedroom units that were common to both 2010 and 2011 spring surveys rose by 1.9 per cent. This rate of increase in rents was stronger in relation to increases in April of 2010.

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b-Very good, c - Good, d - Fair (Use with Caution)

^{**} Data suppressed to protect confidentiality or data not statistically reliable.

⁺⁺ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0). n/u: No units exist in the universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey** (RMS) every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

Acknowledgement

The Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, and building superintendents throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at I-800-668-2642 or by fax at I-800-245-9274. Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is available for free on CMHC's website. You can view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient! Go to www.cmhc.ca/housingmarketinformation

For more information on MAC and the wealth of housing market information available to you, visit us today at www.cmhc.ca/housingmarketinformation

To subscribe to priced, printed editions of MAC publications, call 1-800-668-2642.
