CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Second Quarter 2011

New Home Market

Housing starts up 39 per cent through March

To the end of March, local homebuilders across the Regina Census Metropolitan Area (CMA) began construction on a total of 330 housing units, up 39 per cent from the 238 units which broke ground during the corresponding

period in 2010. Higher production of both single-detached and multi-family units has fuelled these gains as Metro's builders outperformed last year's elevated pace of activity.

During the first three months of the year, Regina's single-detached homebuilders' poured foundations for an average of 57 units each month, paving the path for a 21 per cent improvement

over last year's corresponding tally. More significantly, the 170 single-detached units initiated through March highlight the fourth strongest start to a year by Metro's single home builders in over 30 years. Notwithstanding these gains, the largest year-over-year improvements were observed within the multi-family housing segment, where a rise in rental apartment starts fuelled year-over-year increases through March. Accordingly, to the end of March, 160 multi-family homes began construction in Regina, up 63 per cent from the 98 units which began construction during the first three months of 2010.

So far this year, the buoyant pace of multi-family starts has enabled this housing segment to capture 48 per cent of total new home production in Regina, up from a share of 41 per cent in the prior year. Meanwhile, the 148 apartment units that began construction during the first

quarter of 2011 accounted for 93 per cent of all multi-family starts to date, and represent over a two-fold increase from the prior year when 61 units were started. After three months of activity, the elevated number of apartment starts has countered losses in semi-detached and row starts. To the end of March, eight row units began construction,

down 68 per cent from the first quarter of 2010, while four semi-detached units were initiated in the first three months of 2011, down from the 12 units that were started in the prior year.

Supply levels remain elevated

With an inventory of 104 completed and unabsorbed homes and 1,456 units under construction in March, total new home supply in Regina surpassed 1,500 units, unfamiliar territory for Metro's new home builders. The major impetus for the heightened supply levels was the multi-family market, as the supply of multi-family units in March was 26 per cent higher than the previous year. Given the heightened pace of starts thus far, the number of multi-family units under construction advanced 29 per cent year-over-year, climbing from 637 units in March 2010 to 821 units at the end of the first quarter of the

Figure 3

Source: CMHC

current year. However, at 65 units at the end of March, the inventory of complete and unabsorbed multi-family units was down seven per cent from the corresponding period in 2010.

Meanwhile, at 674 units at the end of March, total supply of new single-detached homes was up seven per cent from the prior year. The 635 units under construction accounted for the bulk of supply, while an additional 39 units were completed and unabsorbed at the end of the first quarter.

Single-detached absorptions down 34 per cent

At 179 units to the end of March, total first quarter absorptions were down 20 per cent from the 224 units absorbed during the first three months of 2010. The subdued pace of single-detached completions and absorptions last quarter accounted for the moderation. Accordingly, 116 single-detached units were absorbed through March, down 34 per cent from the prior year but on par with the 117 single-detached completions tallied through March. Meanwhile, 63 multi-unit absorptions were recorded from January to March, up 29 per cent from the pace set in the first quarter of 2010.

The absorbed price of new single-detached homes in Regina averaged \$491,702 through the first three months of 2011, up 15 per cent from the corresponding period last year. While some of the increase

can be attributed to upward price pressure for land, the majority of gains reflect a continuing shift in the sales distribution toward the upper price ranges. Accordingly, to the end of March, 44 per cent of all single-detached absorptions occurred above \$450,000, up from the previous year's share of 36 per cent.

Resale Market

Sales of existing homes moderate 3.8 per cent through March

Following a three per cent decline in 2010, resale transactions began the year on a slow footing in Regina, as extreme winter conditions inhibited resale activity. The 770 transactions recorded during the first quarter of 2011 highlight a nearly four per cent reduction from the first three months of 2010 when 800 existing home sales were recorded. In spite of this moderation however, seasonally adjusted sales trended upwards through March, and the current pace of activity represents the fifth strongest start to the year since 1986.

There were a total of 1,439 new listings through March, down six per cent from the previous year as extreme winter conditions motivated some prospective sellers to delay their sale, and consequently, listing of their homes into the future. Driven by the slower pace of listings last quarter, existing home inventory edged downwards in March as Regina's resale market

ended the quarter with 1,116 active listings, down four per cent from the prior year.

The sales-to-active listings ratio (SALR) averaged 24 per cent during the first quarter of 2011, unchanged from the first three months of the previous year. Under these conditions, it took 42 days to sell the average home from January through March, two days more than the first quarter of 2010. Consequently, price growth compared with the first quarter of 2010 has been tempered. A typical resale unit sold for \$270,284 during the first three months of 2011, up seven per cent from the previous year.

Economy

Employment levels decline through March

After a little over three per cent employment expansion that resulted in the addition of over 3,000 positions in 2010, Regina recorded a slow start to the year for job creation. Seasonally adjusted employment edged downwards during the first three months of the year, and averaged 118,700 positions through March. This, coupled with the steady inflow of migrants, resulted in a slight increase in the unemployment rate from 5.2 per cent a year ago, to 5.8 per cent during the first three months of 2011. However, last year's strong performance continues to maintain elevated employment levels across Regina, as actual employment averaged 116,800 positions through

Figure 4

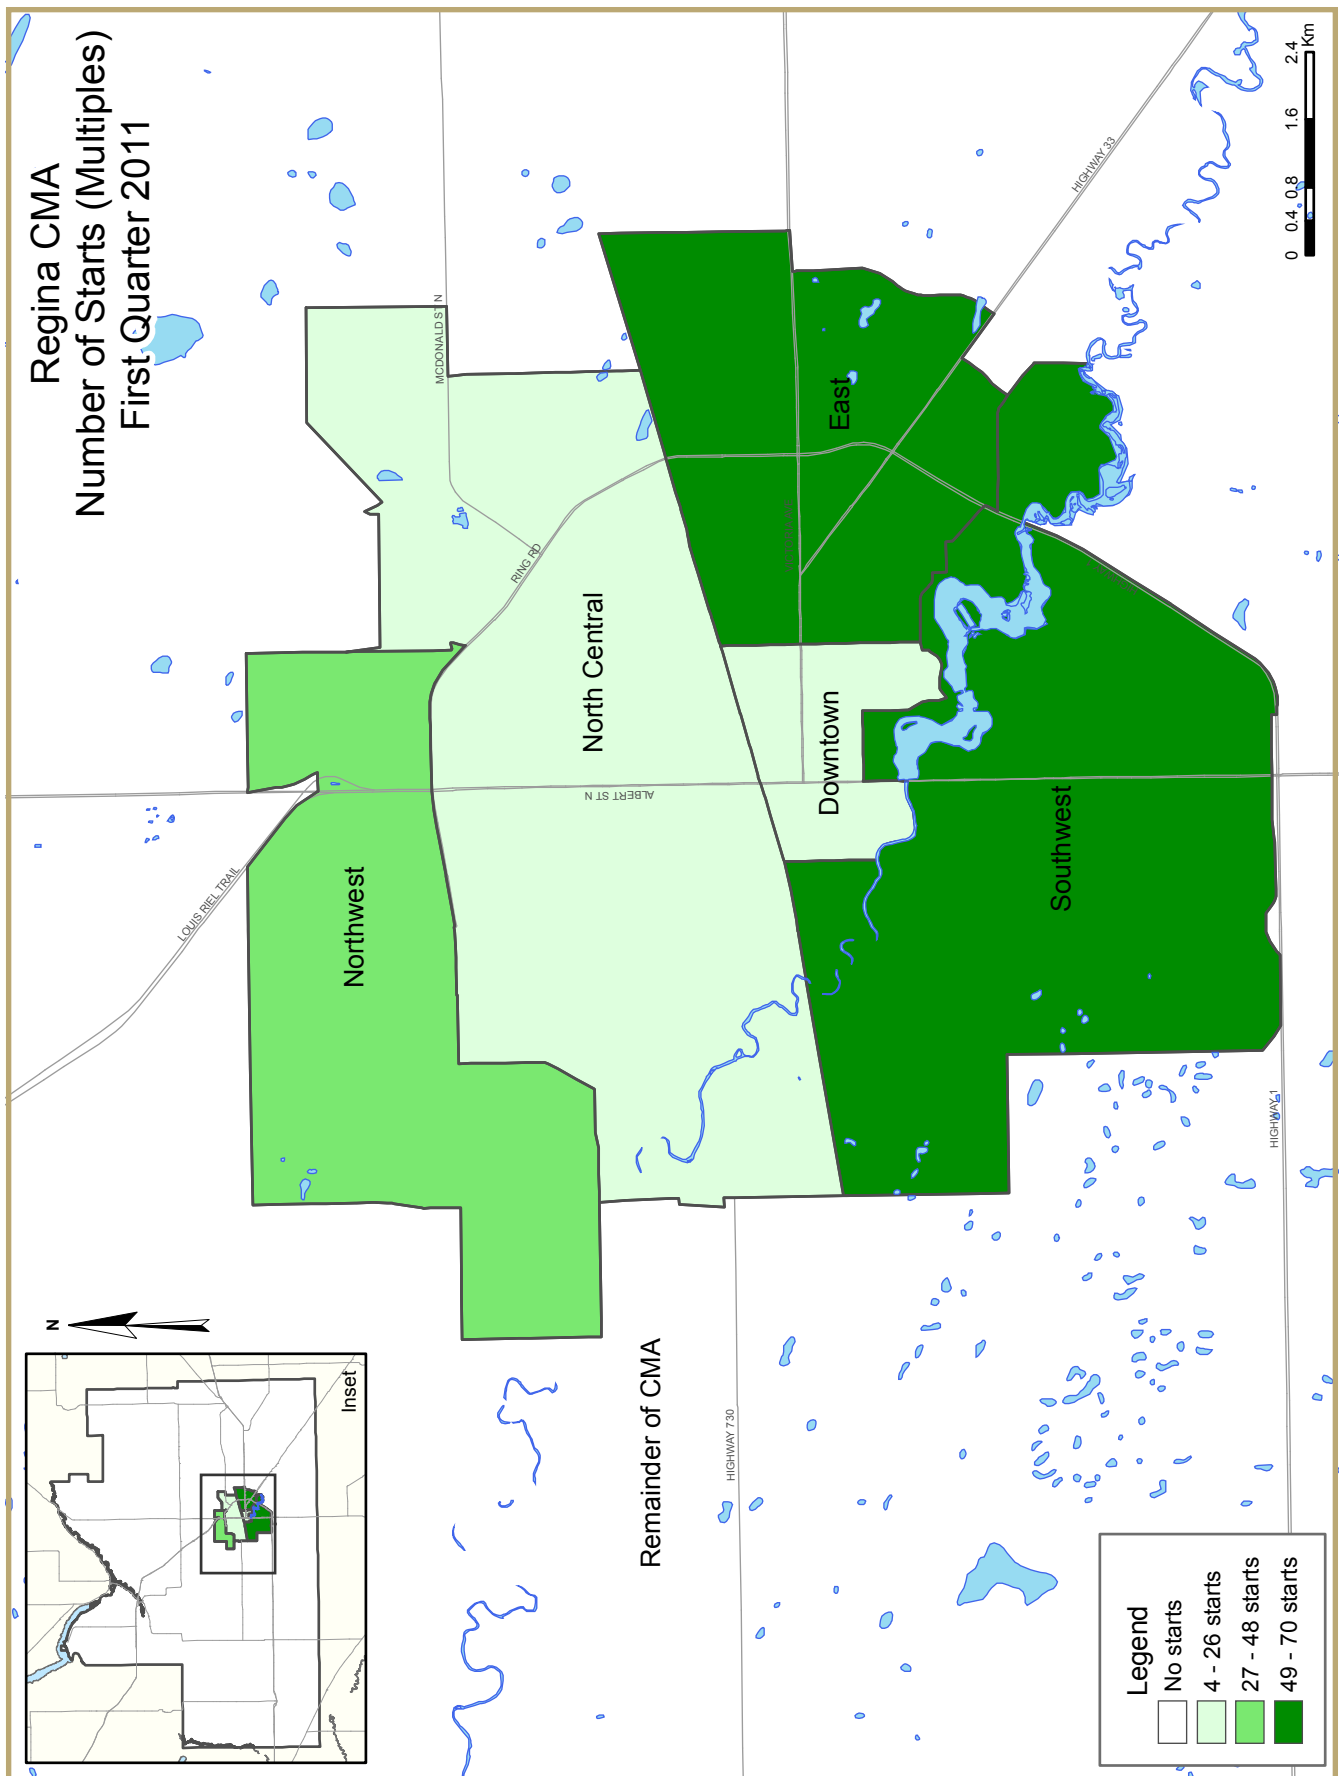

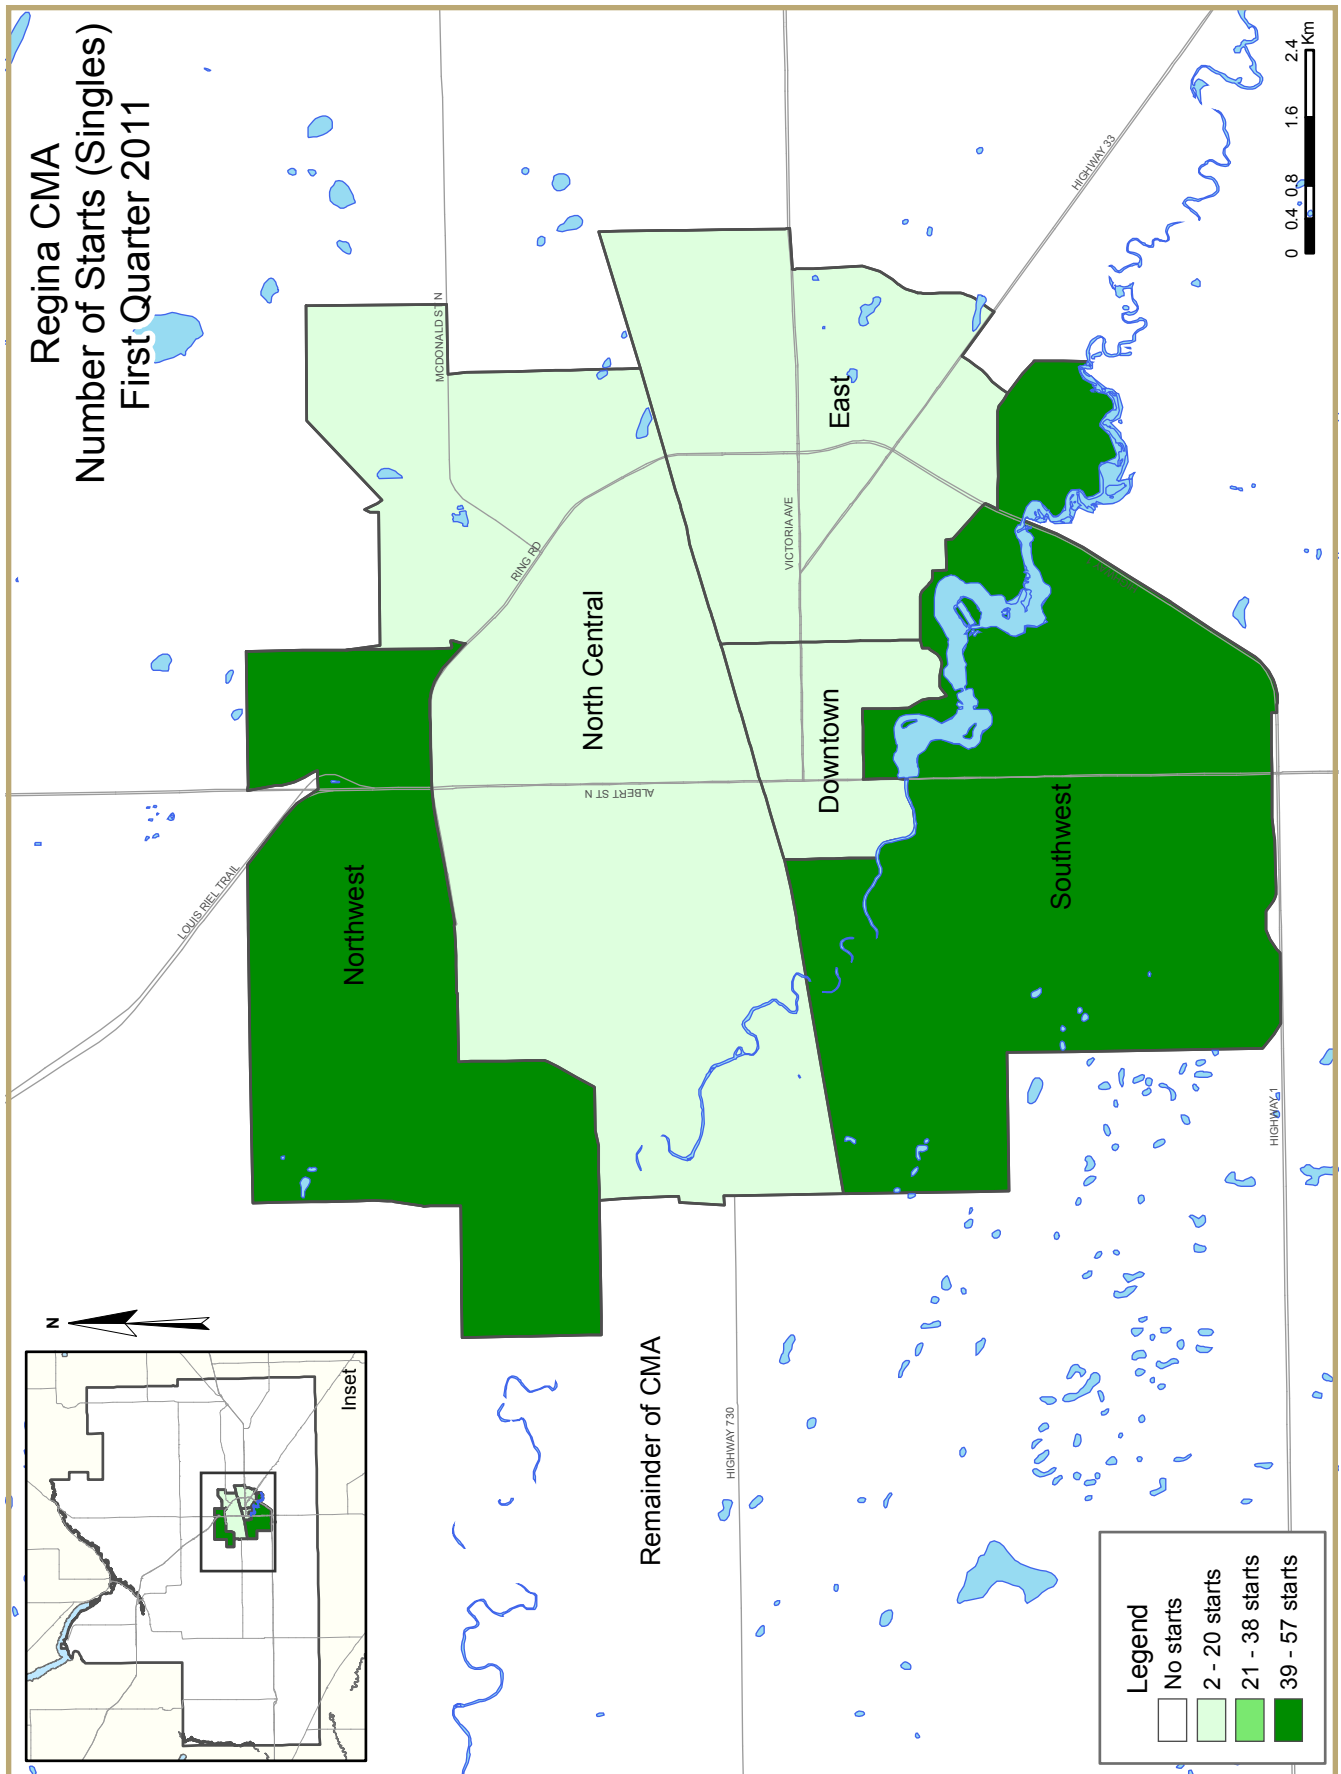

Source: Statistics Canada Regina, SA Employment, All Ages (15+), Total, Both sexes

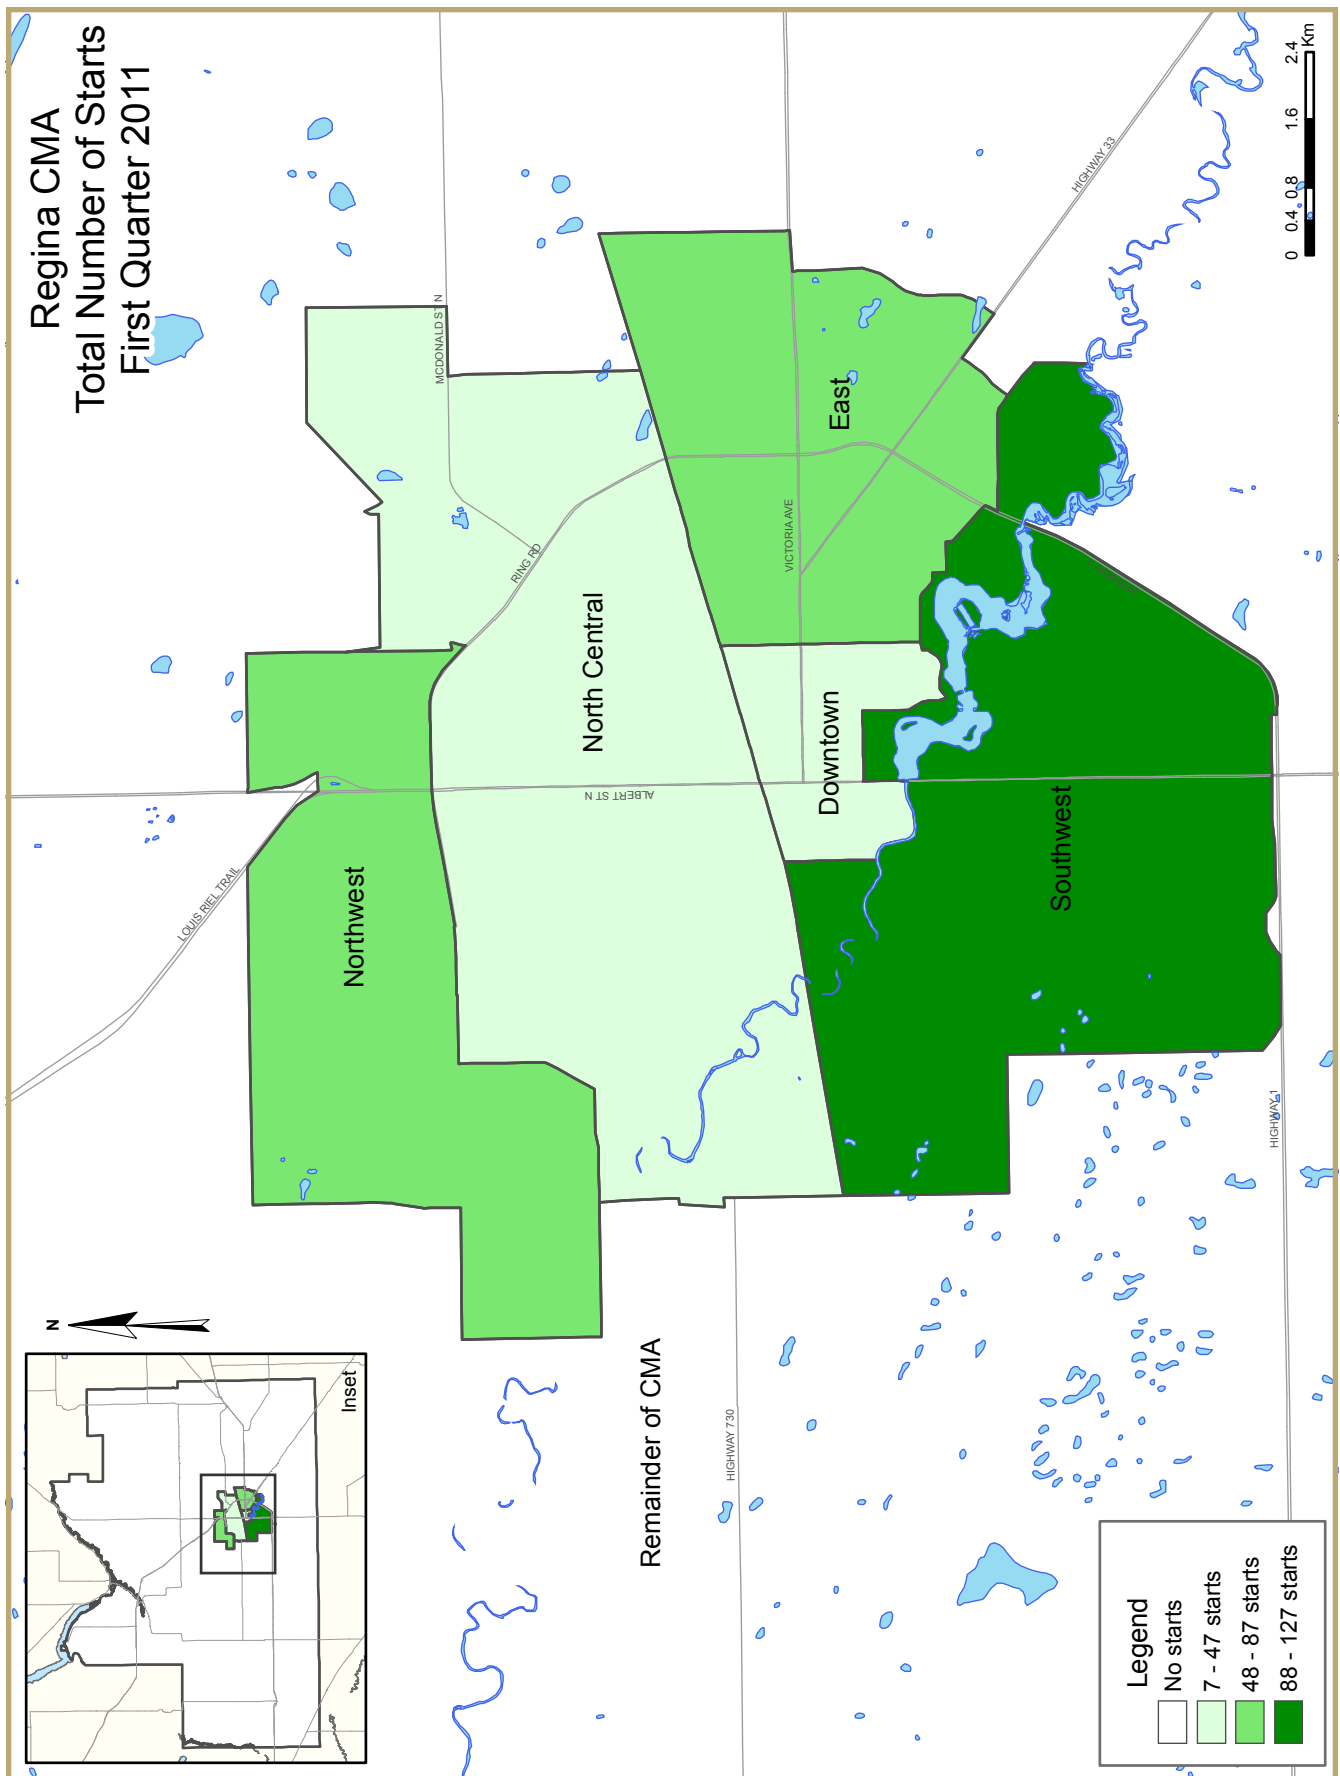

March, up 3.1 per cent from the prior year. Meanwhile, current labour market conditions continued to support wage growth. At \$904 to the end of March, Statistics Canada's average weekly earnings for Regina advanced in the first quarter by 8.3 per cent year-over-year.

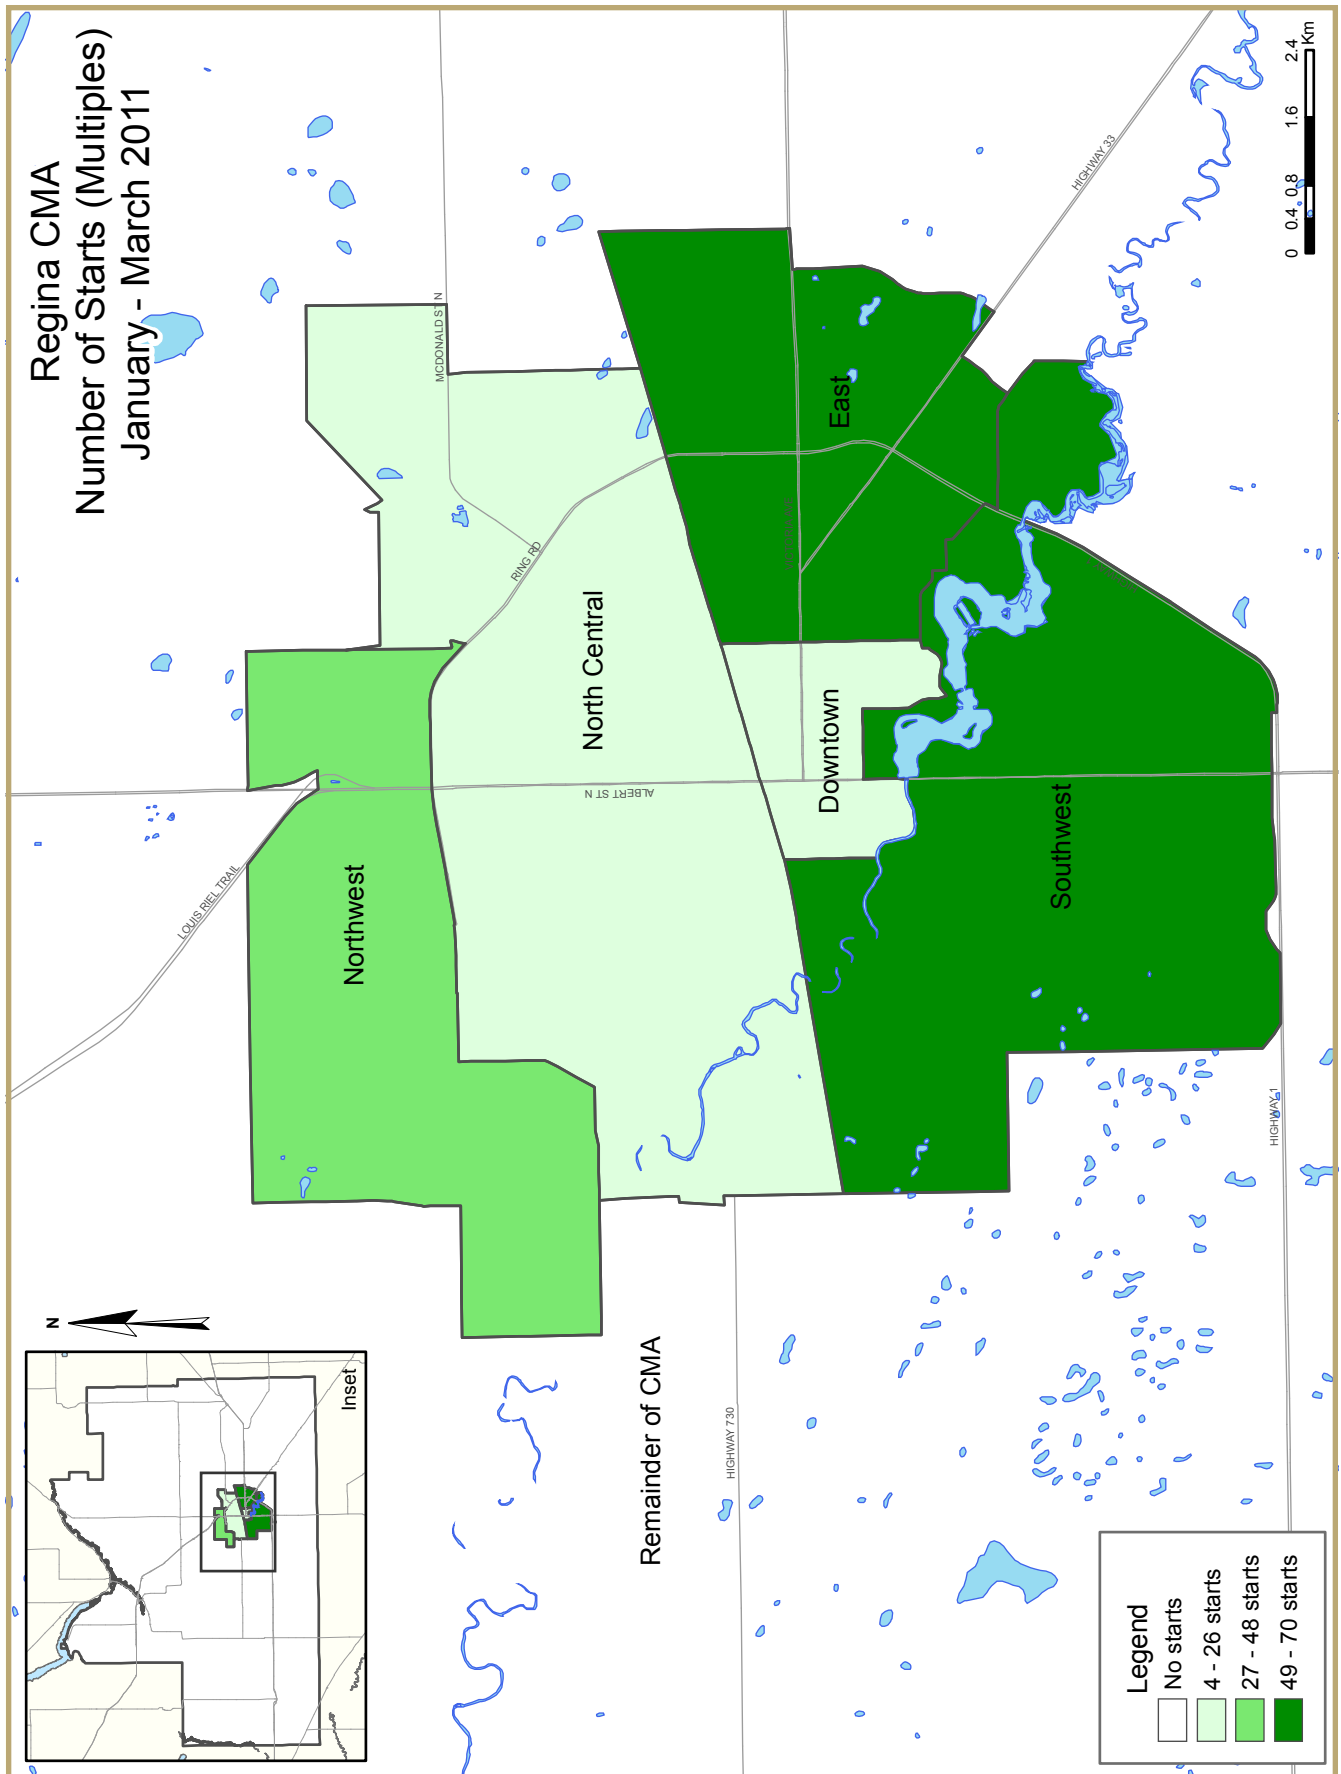

Last year, Regina's population expansion continued to be supported by net migration. Statistics Canada's population estimates reported that Saskatchewan recorded an inflow of over 10,000 net migrants in 2010, the second year in succession that

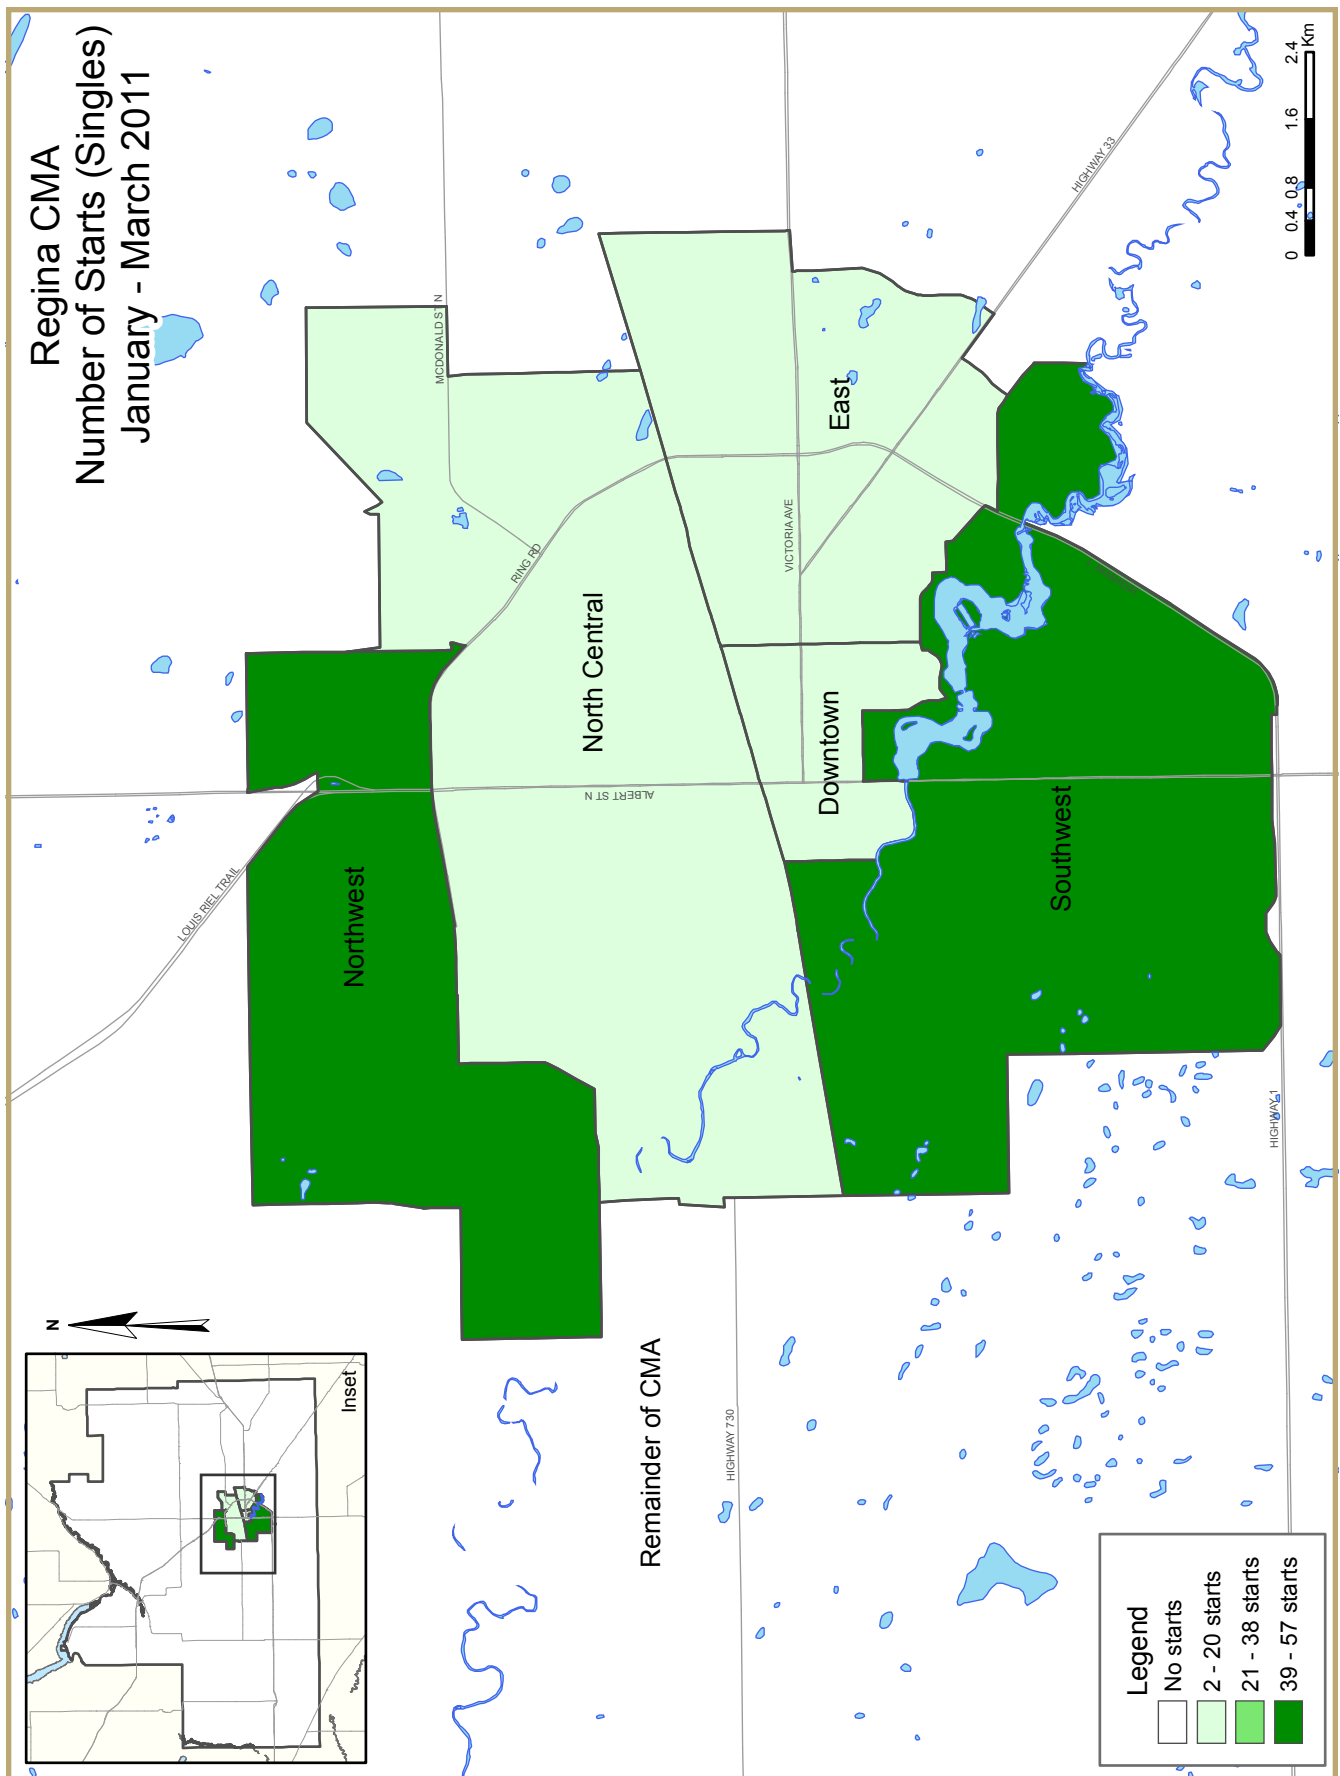

migration surpassed 10,000 people. Despite this occurrence however, fourth quarter data suggests that the rising unemployment rate and slow pace of job creation in many centres across the province inhibited net migration through the latter months of the year. From October through December of last year, inter-provincial migration to Saskatchewan totalled 209 people, 73 per cent lower than the previous year. A smaller number of inter-provincial migrants from Ontario was a key contributor to the reduction. Meanwhile, international migrants and non-permanent residents also moderated in the fourth quarter of 2010, declining from 1,345 people in the fourth quarter of 2009 to 1,056 last year.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
