HOUSING MARKET INFORMATION

HOUSING NOW Winnipeg CMA

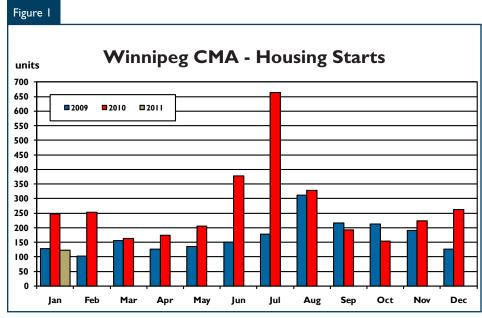

Date Released: February 2011

New Home Market

Winnipeg housing starts slow in January

Home builders in the Winnipeg Census Metropolitan Area (CMA) began construction on 122 units in January, down from 248 in the first month of 2010. A decrease in multifamily starts was chiefly responsible for the weaker numbers.

The Winnipeg CMA recorded 115 single-detached starts in January, only one less than the number started in January 2010. This result maintains the same pace set in 2010 despite this year's colder temperatures and greater precipitation that can typically inhibit production. Starts were down within the City of Winnipeg limits where 89 starts were recorded in January compared to 93 one year earlier, representing a decline of four per cent. The other municipalities

Source: CMHC

outside of Winnipeg that comprise the CMA saw a 13 per cent increase in starts activity with 26 single-family starts in 2011 compared to 23 one year earlier. Of those 26 starts, 11 were in the RM of Springfield.

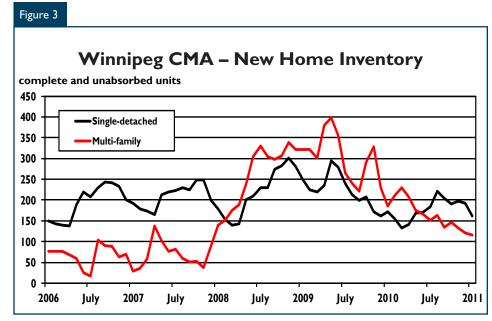

Across the CMA, single-detached completions in January numbered 56 units, down 56 per cent from the 127 units completed during the corresponding period of last year. The decline in absorptions of single-family homes was not as pronounced,

posting a drop of 26 per cent under the same year-over-year comparison. The inventory of completed and unoccupied single-detached homes stood at 161 units in January, representing a decrease of 6.4 per cent from January 2010 and below the five year average inventory of around 200 units.

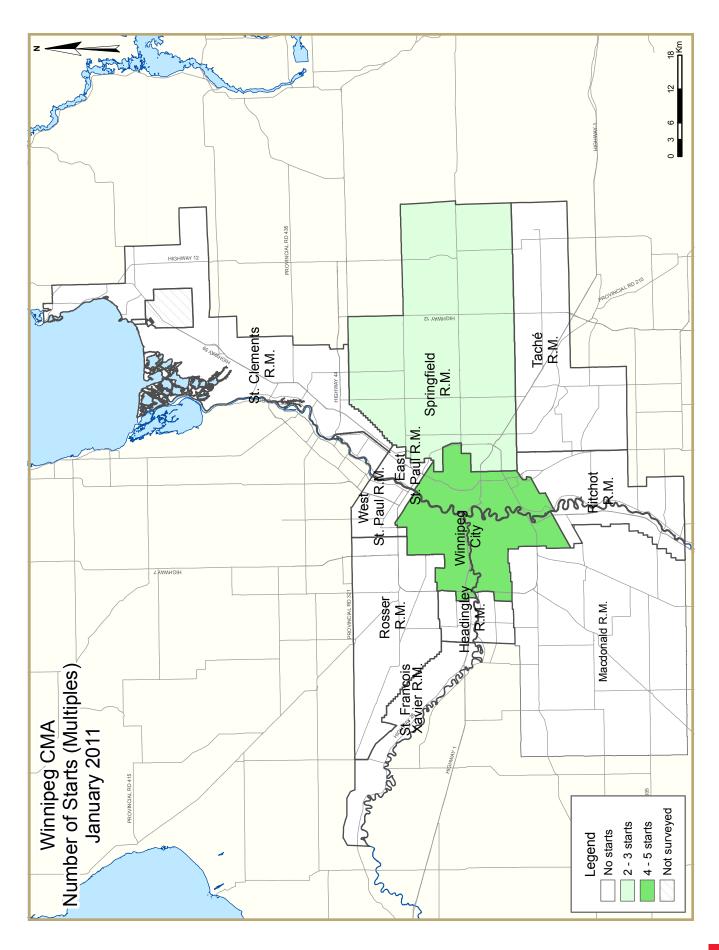

The average price of a new singledetached home absorbed in January in the Winnipeg CMA was \$367,688, down 0.4 per cent from the average price reported in January 2010. Gains in average absorbed price were tempered by a drop in market share for homes in the top price range of more than \$425,000. Market share in this category fell to 16 per cent in January of 2011 compared to 22 per cent at the corresponding period last year. The median price of all newly absorbed single-detached homes in January was \$349,428, just over two per cent greater than it was at the same time last year.

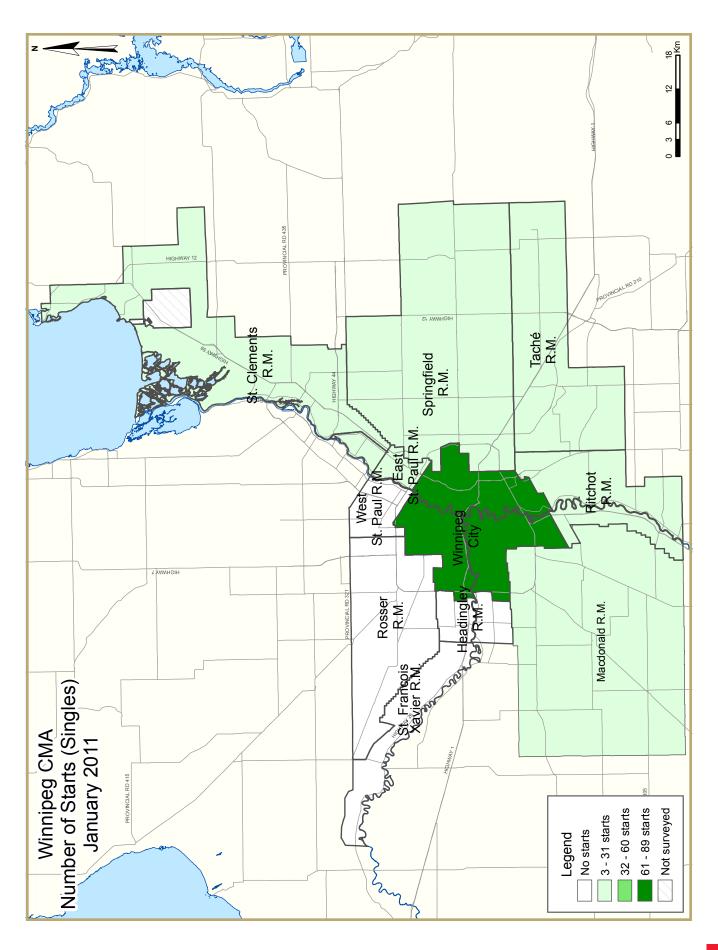

Meanwhile, the multi-family sector, which includes semi-detached units, rows, and apartments, saw a sizable reduction in the pace of starts from the prior year. There were only seven multi-family starts in January, in comparison to the 132 starts recorded one year earlier. This is not unusual as multi-family starts can vary from month to month and tend to slow during the winter months due to the colder temperatures. There are also a large number of units currently under construction, which can have an impact on the initiation of new projects. The total number of multifamily units under construction in January was 1,273 units, an increase of 86 per cent over January of last year.

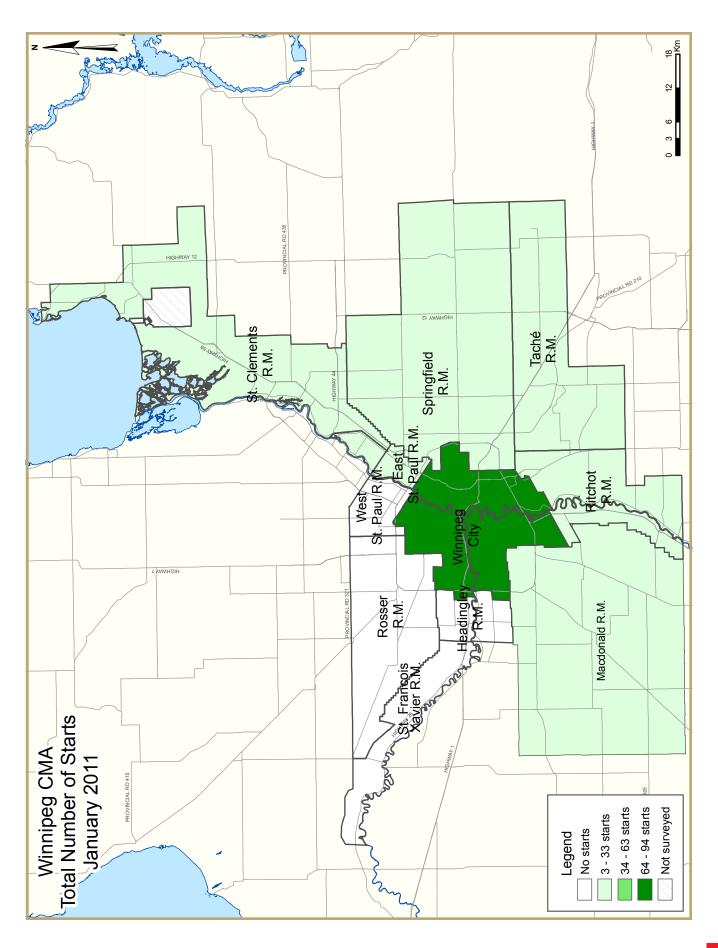

The total number of multi-family units completed and not absorbed in January was 115 units, down 38 per cent from January of 2010 and below the five year average of 175 units. There remains one rental unit within this inventory; the remainder are intended for the ownership market. Given low completion levels, there were only 10 multiple-family units absorbed in January of 2011 compared to 46 units absorbed one year earlier for a decline of 78 per cent. Apartment condominium units have recorded low absorptions in recent months as few units have been completed and the majority of units in inventory have been sitting for many months.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
