CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: December 2011

## New Home Market

### Winnipeg housing starts increase in November

Home builders in the Winnipeg Census Metropolitan Area (CMA) began construction on 369 units in November, up from 223 in November 2010. The increase occurred in both the single-detached and multi-family sectors. After eleven months, total starts for 2011 numbered 3,120 units,

five per cent more than the 2,981 units recorded during the same period of 2010.

The Winnipeg CMA recorded 197 single-detached starts in November, 32 per cent more than the 149 units started in November 2010. This brings year-to-date single-detached starts to 1,853 units, four per cent more than the number of homes started during the same period one year earlier. Single-detached starts are building on 2010's strong numbers and

Source: CMHC

are on pace to set a 22-year high. With this increased activity, the number of single-detached homes under construction in November was 978, ten per cent more than in November of 2010.

There were 195 single-detached homes completed in November, five per cent more than the 186 units completed in November 2010. After eleven months, the number of completions was 1,737 units, seven per cent more than the number completed during the corresponding period of 2010. Absorptions also posted an increase in November, rising from 176 units in November 2010 to 190 units in November 2011, for an increase of eight per cent. Single-

detached absorptions year-to-date in November numbered 1,731 units, ten per cent more than during the corresponding period in 2010. With absorptions keeping pace with completions in 2011, inventories remained stable as the number of complete and unoccupied single-detached homes at the end of November numbered 196 units, two fewer units than the 198 units in inventory one year earlier. Adding inventory to the number of units under construction, the total supply at the end of November stood at 1,174 units, eight per cent more than at the end of November 2010. At the current six-month average rate of absorption, this represents six months of supply.

The average price of a new single-detached home absorbed in the Winnipeg CMA in November was \$407,109, nearly seven per cent higher than the average price posted in November of 2010. The median price saw a nine per cent increase, going from \$342,700 to \$373,763, under the same comparison. The year-to-date average price was \$393,535, an increase of five per cent from the prior year.

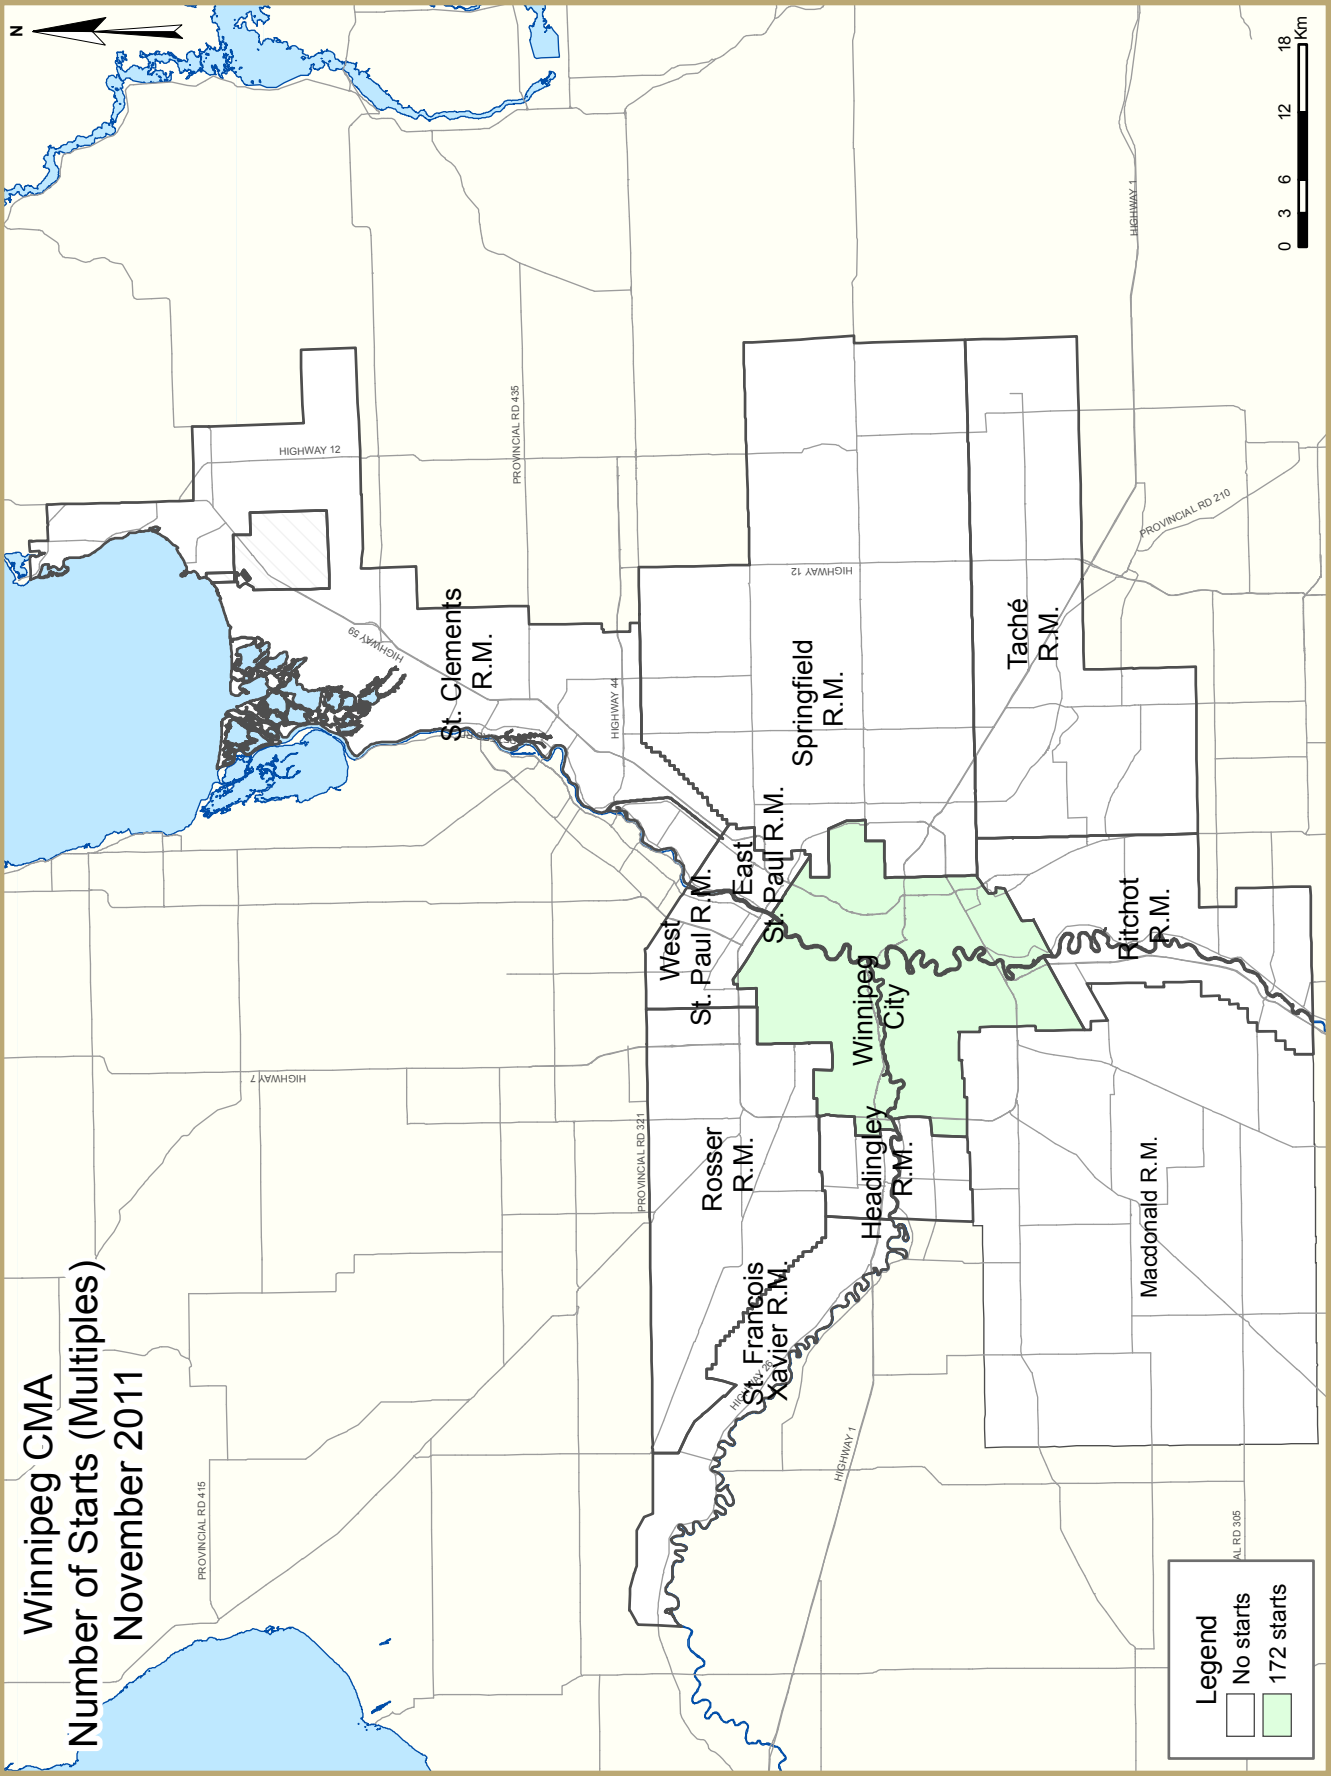

The multi-family sector, which includes semi-detached units, rows, and apartments, saw 172 units break ground in November, more than double the 74 units started one year earlier. Multi-family starts year-to-date numbered 1,267 units, surpassing 2010's total for the same period by more than five per cent. Among dwelling types, semi-detached starts after 11 months equalled 2010's corresponding total of 38 units, while apartment starts numbered 922 units, 11 per cent below the previous year. Row starts, however, were more than double 2010's corresponding tally, totalling 307 units to the end of November. This helped bring the number of multi-family units under construction at the end of November to 1,473, 26 per cent higher than it was in November 2010.

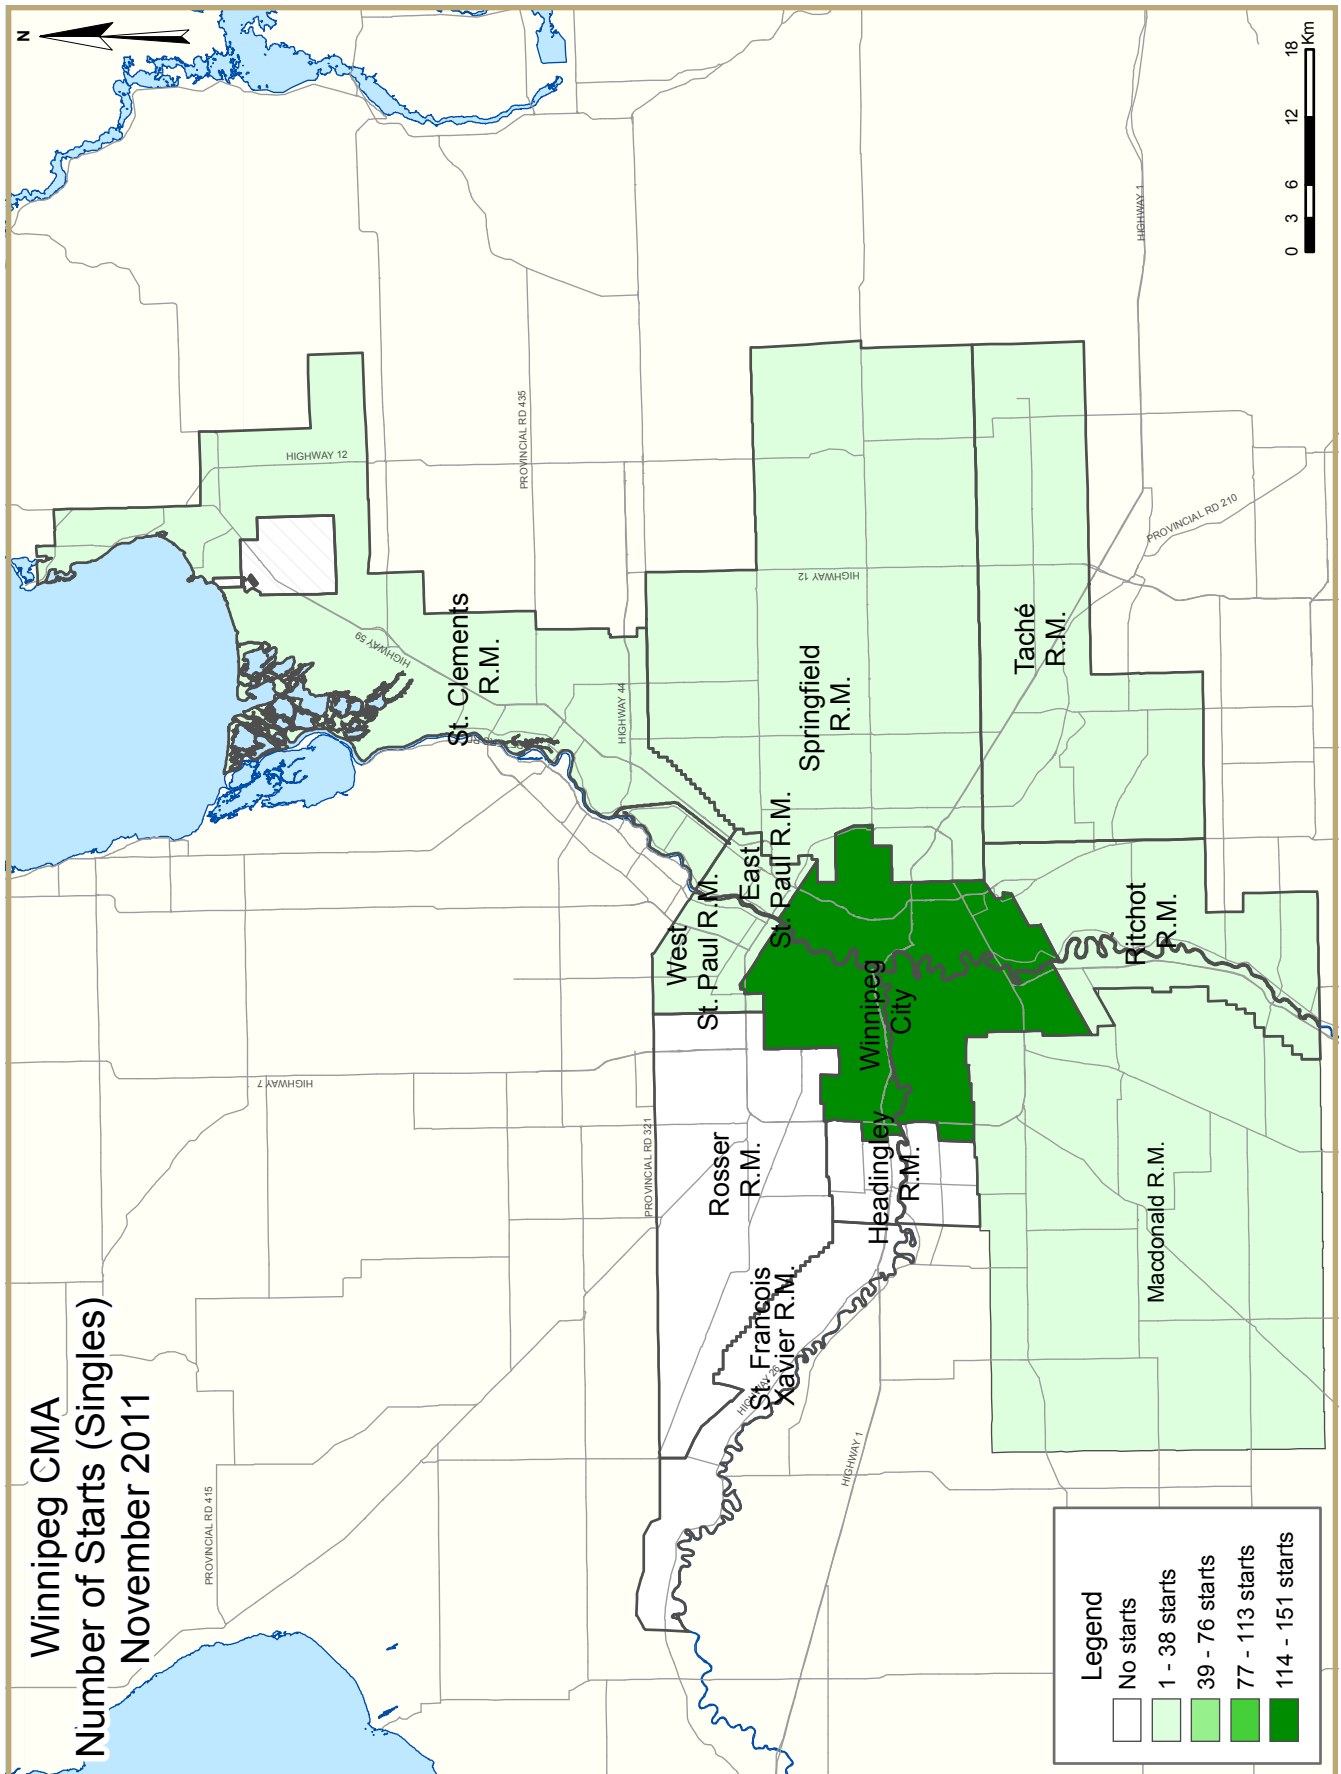

There were 186 multi-family units completed in November, substantially more than the 14 units completed in November 2010. This brings the number of units finishing construction during the first eleven months of 2011 to 1,056, an increase of 82 per cent from the corresponding period of 2010. Correspondingly, the number of absorptions year-to-date in November was 957 units, 66 per cent more than the 575 units absorbed in the first eleven months of 2010. This kept the inventory of multi-family units completed and not absorbed at the end of November to 134 units, almost identical to the 133 units in inventory in November 2010. Total supply however, which includes units under construction, stood at 1,607 units at the end of November, 24 per cent higher than the previous year.

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
