Winnipeg CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: March 2011

New Home Market

February housing starts in Winnipeg down from last year

Home builders in the Winnipeg Census Metropolitan Area (CMA) began construction on 180 units in February, down from 252 in February 2010. The decrease occurred in both multiple and single-detached starts. After two months of activity, total

starts for 2011 reached 302 units, a decline from the 500 units started over the same period in 2010.

The Winnipeg CMA recorded 84 single-detached starts last month, 17 per cent lower than the 101 units started in February 2010. Builders concentrated on units started in the previous months as there were 23 per cent more units under construction at the end of February compared to the same time last year. Through the first two months of the year, single-

detached starts numbered 199 units, 18 fewer units than were started during the same period one year earlier. So far this year, starts continue to lag within the City of Winnipeg limits where year-to-date, there were 13 per cent fewer starts compared to the same period in 2010. Starts outside the city limits were up however as the other municipalities outside of Winnipeg that comprise the CMA saw a 16 per cent increase in starts activity under the same comparison; this translates to a difference of six units.

Across the CMA, single-detached completions in February numbered 44 units, a modest increase over the 41 units completed during the corresponding period of last year. However, year to date completions are down 41 per cent compared to 2010. Meanwhile, absorptions declined 20 per cent year-over-year in February, and now stand at 139 year-to-date, representing a decline of 21 per cent over the first two months of 2010. The inventory of completed and unoccupied single-detached homes remains virtually unchanged,

numbering 153 units in February 2011 compared to 155 units in the second month of 2010, this remains below the five year average inventory of around 200 units.

The average price of a new single-detached home absorbed in February in the Winnipeg CMA was \$355,026, down 13 per cent from the corresponding period in 2010. The average price decrease appears to be largely compositional as 54 per cent of homes absorbed in February of 2011 were priced under \$325,000, compared to 24 per cent one year earlier. Year-to-date, market share of homes priced below \$325,000 is 45 per cent, compared to 37 per cent in 2010. Meanwhile, the median price of all absorbed single-detached homes in February was \$320,929, also 13 per cent less than it was at the same time last year.

The multi-family sector, which includes semi-detached units, rows, and apartments, saw 96 units break ground in February. This was not enough, however, to outpace the 151 starts recorded one year earlier. A total of 103 multiple-family units were started in the first two months of 2011, less than half the 283 units initiated a year earlier. It is important to note, however, that multi-family starts for

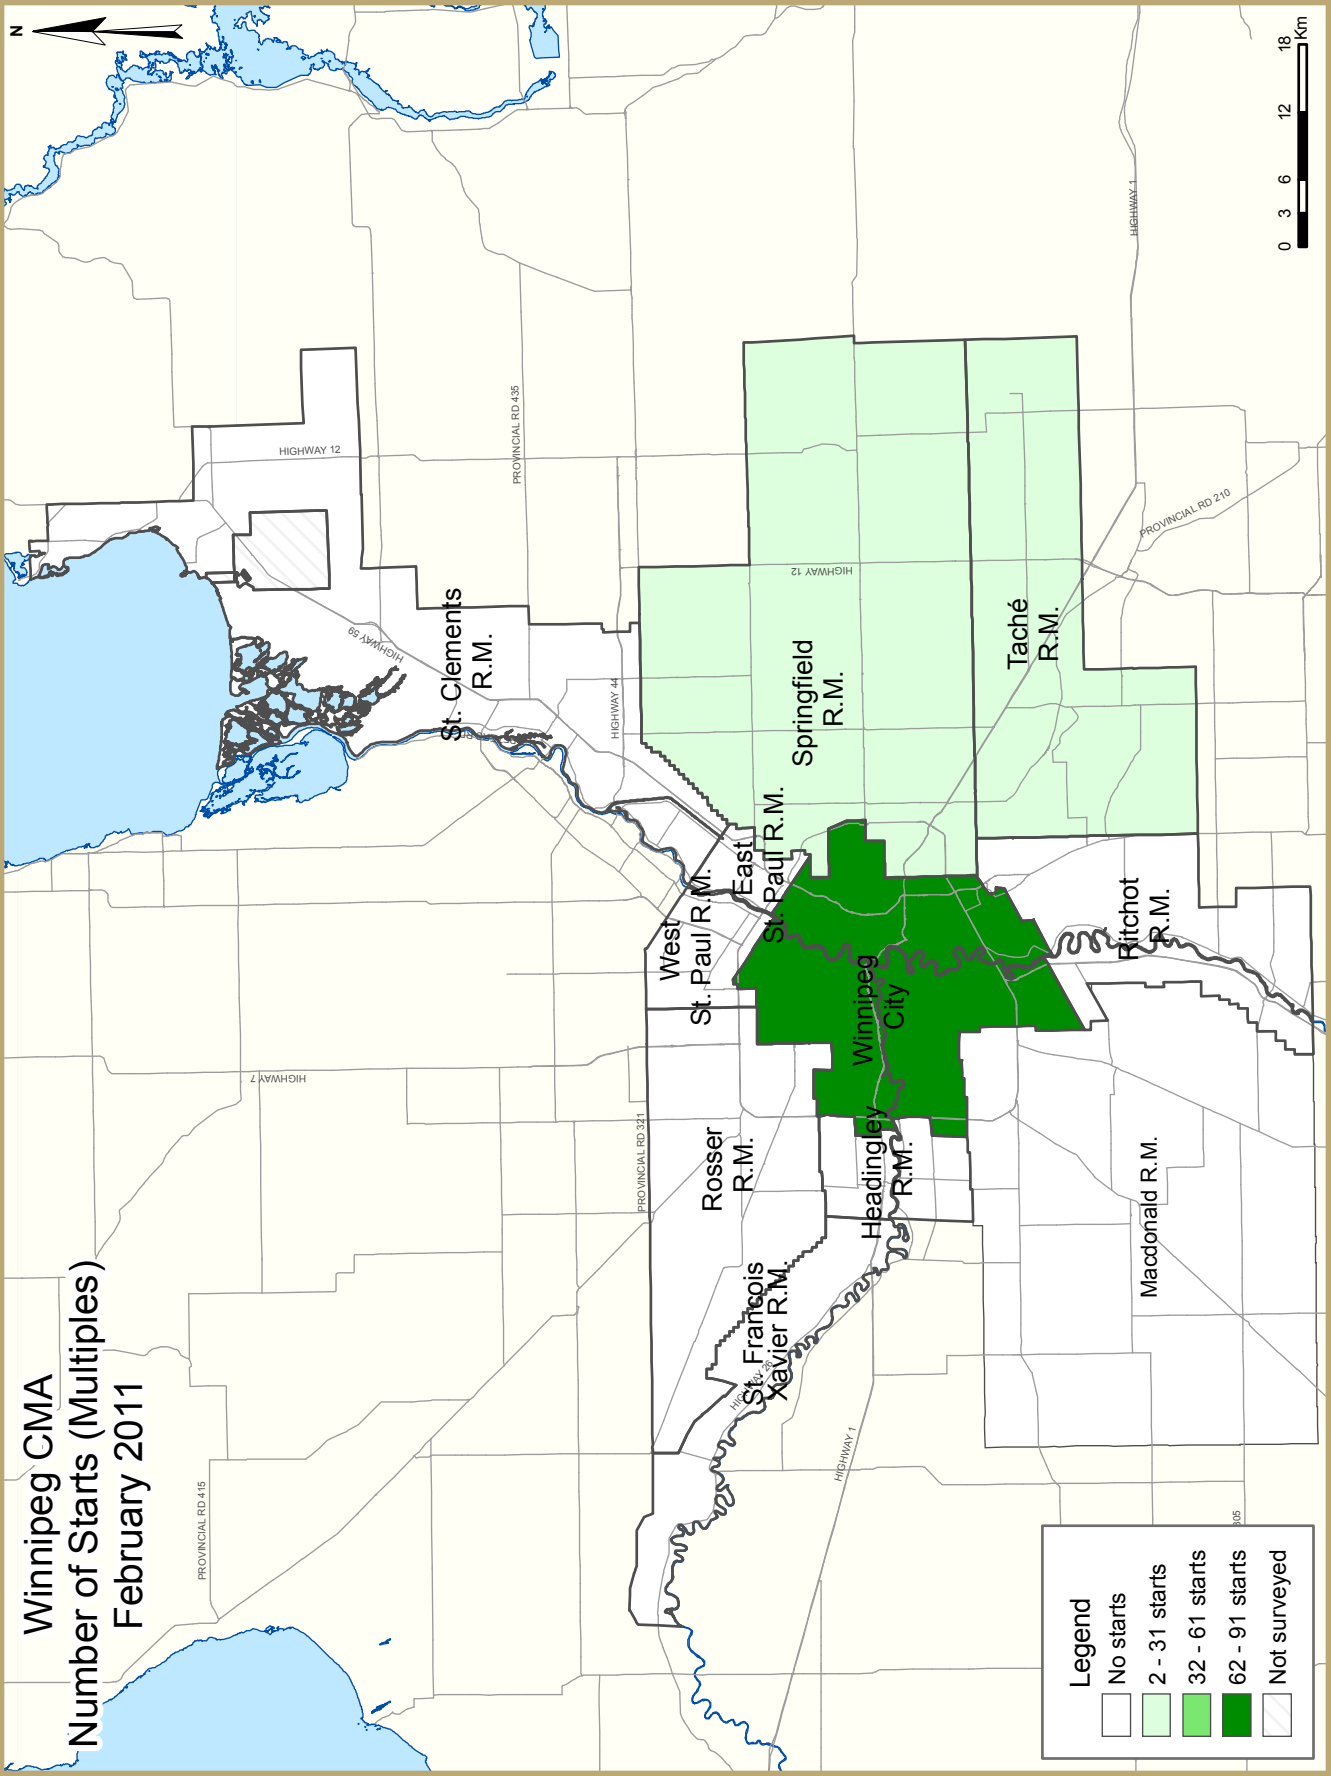

the first two months of 2010 were the highest in 23 years, a pace that is very hard to surpass. The year-to-date multi-family starts for 2011 are still in line with the five-year average of just under 100 units. The total number of multi-family units under construction was 1,361 in February, up 73 per cent from the corresponding period last year.

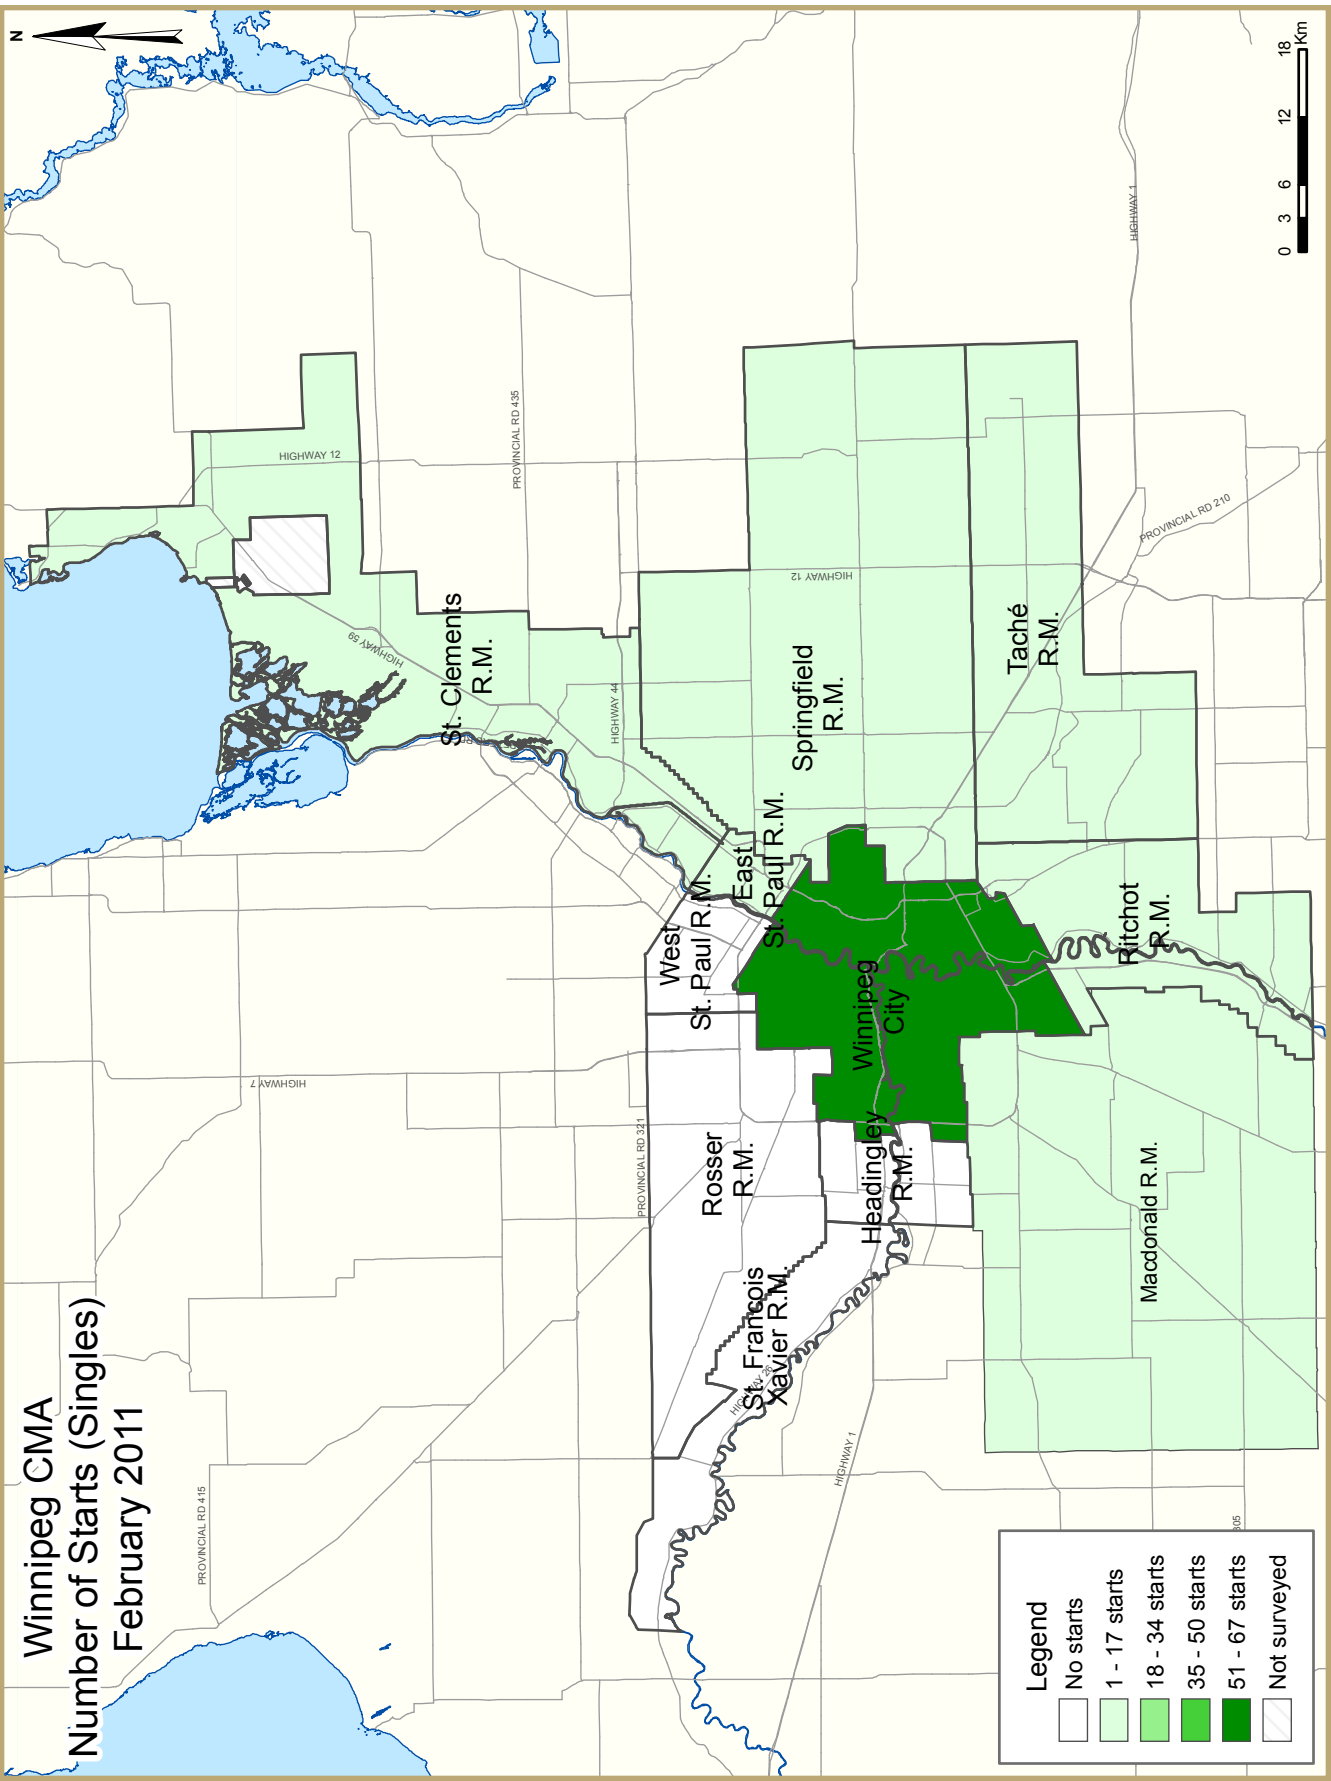

Meanwhile, there were 12 multi-family units absorbed during the month of February, less than half the 26 that were absorbed in February of last year. This brought the inventory of multi-family units completed and not absorbed in February to 111 units, down 47 per cent from February of 2010 and below the five year average of 175 units. There remains one rental unit within this inventory; the remainder are intended for the ownership market.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
