CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: May 2011

New Home Market

Winnipeg housing starts move higher in April

Home builders in the Winnipeg Census Metropolitan Area (CMA) began construction on 261 units in April, up from 174 in April 2010. The increase occurred in both multiple unit and single-detached starts. Notwithstanding April's elevated pace of production, total starts for the first

four months of 2011 are lagging, numbering 751 units compared to 837 units recorded during the same period of 2010.

The Winnipeg CMA recorded 161 single-detached starts in April, up four per cent from the 155 started in the same month of 2010. The increase in single-detached starts in April could be attributed to advances in municipalities outside the City of Winnipeg, where there were 23 foundations poured in April 2011,

64 per cent more than in April of 2010. This helped bring the number of single-detached homes under construction at the end of April to 1,202 units, 28 per cent more than in April of last year and the highest number since 1989. With this elevated level of activity, single-detached builders are managing to keep pace with last year's strong performance. After four months of production, single-detached starts numbered 509 units, only 10 fewer than the 519 units that were started during the same period one year earlier.

Across the CMA, single-detached completions in April numbered only 26 units, a decrease of 76 per cent

compared to the 109 units that were completed in April 2010. As a result, year to date completions are down 45 per cent compared to 2010. Correspondingly, absorptions also declined 64 per cent year-over-year in April, and now stand at 248 year-to-date, representing a decline of 25 per cent over the first four months of 2010. With absorptions outpacing completions thus far, the inventory of completed and unoccupied single-detached homes has declined by 20 percent year-over-year, numbering 113 units in April 2011 compared to 134 units in the corresponding month of 2010. This represents the lowest number of units in inventory since 2004.

The average price of a new single-detached home absorbed in April in the Winnipeg CMA was \$408,164, 11 per cent higher than in April of 2010. This brings the year-to-date average price to \$400,247, 5.4 per cent higher than one year earlier. After four months of activity, the market share of homes priced above \$425,000 has increased six percentage points and now stands at 29 per cent. Meanwhile, the year-to-date median price of all absorbed single-detached homes in April was \$358,000, 3.7 per cent greater than it was over the corresponding period of last year.

The multi-family sector, which includes semi-detached units, rows, and apartments, saw 100 units break ground in April. This was substantially more than the 19 starts recorded one year earlier. A total of 242 multiple-family units have been started year-to-date, 24 per cent fewer than the 318 started a year earlier. After four months of activity, the tenure of multi-family starts has been skewed towards the ownership market with only 31 per cent rental, compared to the same period last year when the tenure split was nearly even. The total number of multi-family units under construction was 1,165 in April, almost double what it was during the corresponding period last year.

Meanwhile, there were 321 multi-family units completed during the month of April, bringing the total

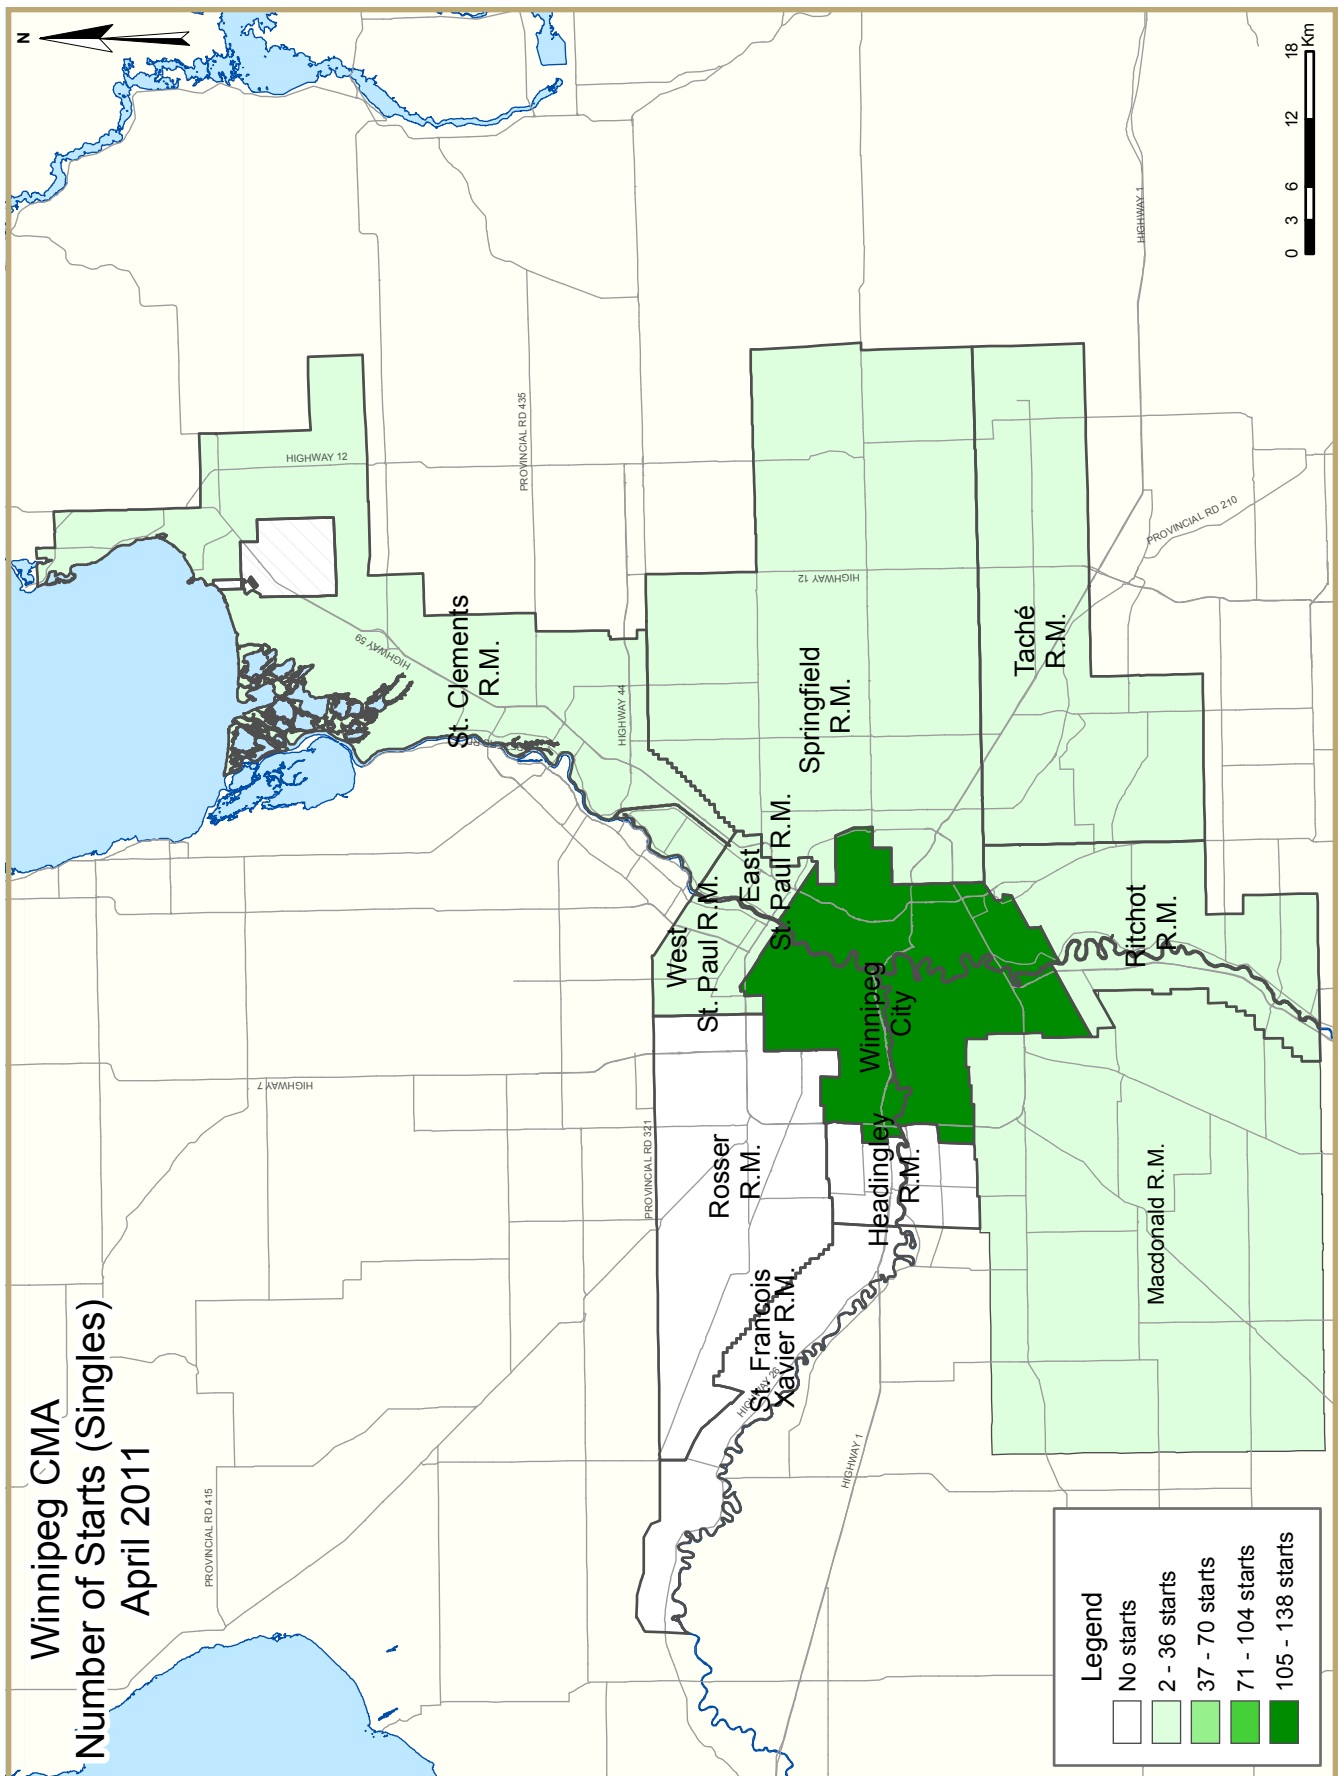

number of units completed during the first four months of the year to 349 units, 30 per cent more than during the first four months of 2010. There were 133 multi-family units absorbed in April 2011, more than five times the number absorbed in April 2010. Nevertheless, the total number of units absorbed year-to-date, at 170 units, continues to lag last year's corresponding total by 42 per cent. As a result of the high number of recently completed apartments awaiting absorption, the inventory of multi-family units completed and not absorbed in April rose to 297 units, 43 per cent greater than it was in April 2010.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
