## Winnipeg CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: July 2011

## New Home Market

### Housing starts decline in June, year-to-date activity remains strong

New home builders in the Winnipeg Census Metropolitan Area (CMA) began construction on 245 units in June, down from 377 in June 2010. The decrease was attributed to a decline in activity in the multiple-family

sector. As a result of this decrease, total starts for the first half of 2011 numbered 1,375 units, slightly less than the 1,419 units recorded during the same period of 2010.

The Winnipeg CMA recorded 205 single-detached starts in June 2011, 11 per cent more than the 184 units started in June 2010 and the best performance for the month of June since 1988. Builders are maintaining a steady pace and after six months

Source: CMHC

of activity, single-detached starts numbered 884 units, five fewer homes than were started during the same period one year earlier. Given the increase, 1,029 single-detached units were under varying phases of construction at the end of June, 10 per cent more than the 937 units under construction at the end of June 2010.

There were 269 single-detached homes completed in June of 2011, 30 per cent more than the number completed in June of 2010. At the mid-point of the year, the total number of completions was at 717, slightly ahead of the 684 completed over the same period of last year. Single-detached absorptions numbered 260 in June, an increase of 24 per cent over June of 2010. This brings the number of single-detached homes absorbed thus far in 2011 to 748, 11 per cent more than were absorbed in the first six months of 2010. With absorptions outnumbering completions for most of this year, the inventory at the end of June stood at 161 complete and unoccupied units, five per cent fewer than in June 2010

and below the five-year average of 205 units.

The average price of a new single-detached home absorbed in June in the Winnipeg CMA was \$388,129, 5.5 per cent higher than in June of 2010. This brings the year-to-date average price to \$385,068, up four per cent from the prior year. Meanwhile, the median price of all absorbed single-

detached homes in June was \$353,730, an increase of 8.8 per cent over the corresponding period last year.

The multi-family sector, which includes semi-detached units, rows, and apartments, saw 40 units break ground in June, substantially less than the 193 starts recorded one year earlier. After six months of activity, a total of 491 multiple-family units have been started, seven per cent fewer than the 530 started a year earlier. Nevertheless, multi-family starts year-to-date remain above the five-year average of 458 units. Condominium and ownership construction was up marginally, as the 186 starts to the end of June were 1.6 per cent higher than the number started in the first six months of 2010. Conversely, rental starts were down 20 per cent under the same comparison. However, at 271 units, rental starts represented 55 per cent of all multi-family starts year-to-date.

The number of multi-family units under construction at the end of June numbered 1,248 units, 57 per cent more than the number under construction in June 2010. Meanwhile,

Figure 3

Source: CMHC

there were 89 multiple-family units completed in June, substantially more than the seven that were completed in June 2010. This brings the total number of units completed in the first six months of 2011 to 512, 75 per cent more than in the first half of 2010. There were 111 multi-family units absorbed in June 2011 compared to 13 one year earlier. This brings the total number of units absorbed year-to-date to 419 units, 18 per cent more than the number of units absorbed over the corresponding period last year. The inventory of multi-family units completed and not absorbed in June stood at 222 units, 34 per cent higher than June 2010.

## Resale Market

### Year-to-date Sales outpacing 2010

Sales of existing homes weakened slightly in the second quarter of 2011 totalling 3,919 transactions, down from 3,953 in the second quarter of 2010. Most of the slowdown occurred in April, the only month of 2011 thus far to post a year-over-year decline in activity. Nevertheless, after six months, sales remain ahead of the pace set in 2010, as year-to-date sales numbered 6,286 through June, an increase of three per cent over the corresponding period of 2010.

The reduction in sales during the second quarter corresponded to a decrease in the number of new listings as there were fewer homes listed between April and June 2011 than during the corresponding period one year ago. As a result, in the second quarter of 2011, the number of new listings averaged 1,796 units per month, a decrease of almost

Figure 4

Source: CREA

four per cent over the average for the second quarter of 2010. Year-to-date new listings were down one per cent compared to 2010. Active listings also decreased in the second quarter as there was an average of 1,342 homes available for sale at the end of each month compared to 1,441 in the second quarter of 2010, representing a decrease of seven per cent. Consequently, the sales-to-active listings ratio rose, averaging 97 per cent in the second quarter of 2011 compared to 91 per cent from April to June 2010.

With the sales-to-active listings ratio firmly in sellers' market territory, prices continue to rise, albeit at a slower pace than in previous months. The June average price was \$243,977, an increase of 4.5 per cent over June 2010. Year-to-date, the average price stood at \$241,010, an increase of 4.6 per cent over the previous year.

## Economy

### Average weekly earnings increasing

Following strong year-over-year gains of 1.7 per cent in the first quarter, job creation in the Winnipeg CMA slowed slightly from April to June. As a result, by the mid-point of the year, average employment in Winnipeg increased only by 0.5 per cent from the average level of employment during the corresponding period of 2010. The Winnipeg labour force increased fractionally less than the number of employed, as a result the unemployment rate edged down to 5.6 per cent in June 2011 from 5.7 per cent one year earlier. While job creation may be advancing at a slowing pace, the quality of jobs is conducive to housing demand as job creation has been heavily weighted toward full-time positions. Moreover, average weekly earnings are showing strength, increasing 5.3 per cent over the average for the first half of 2010.

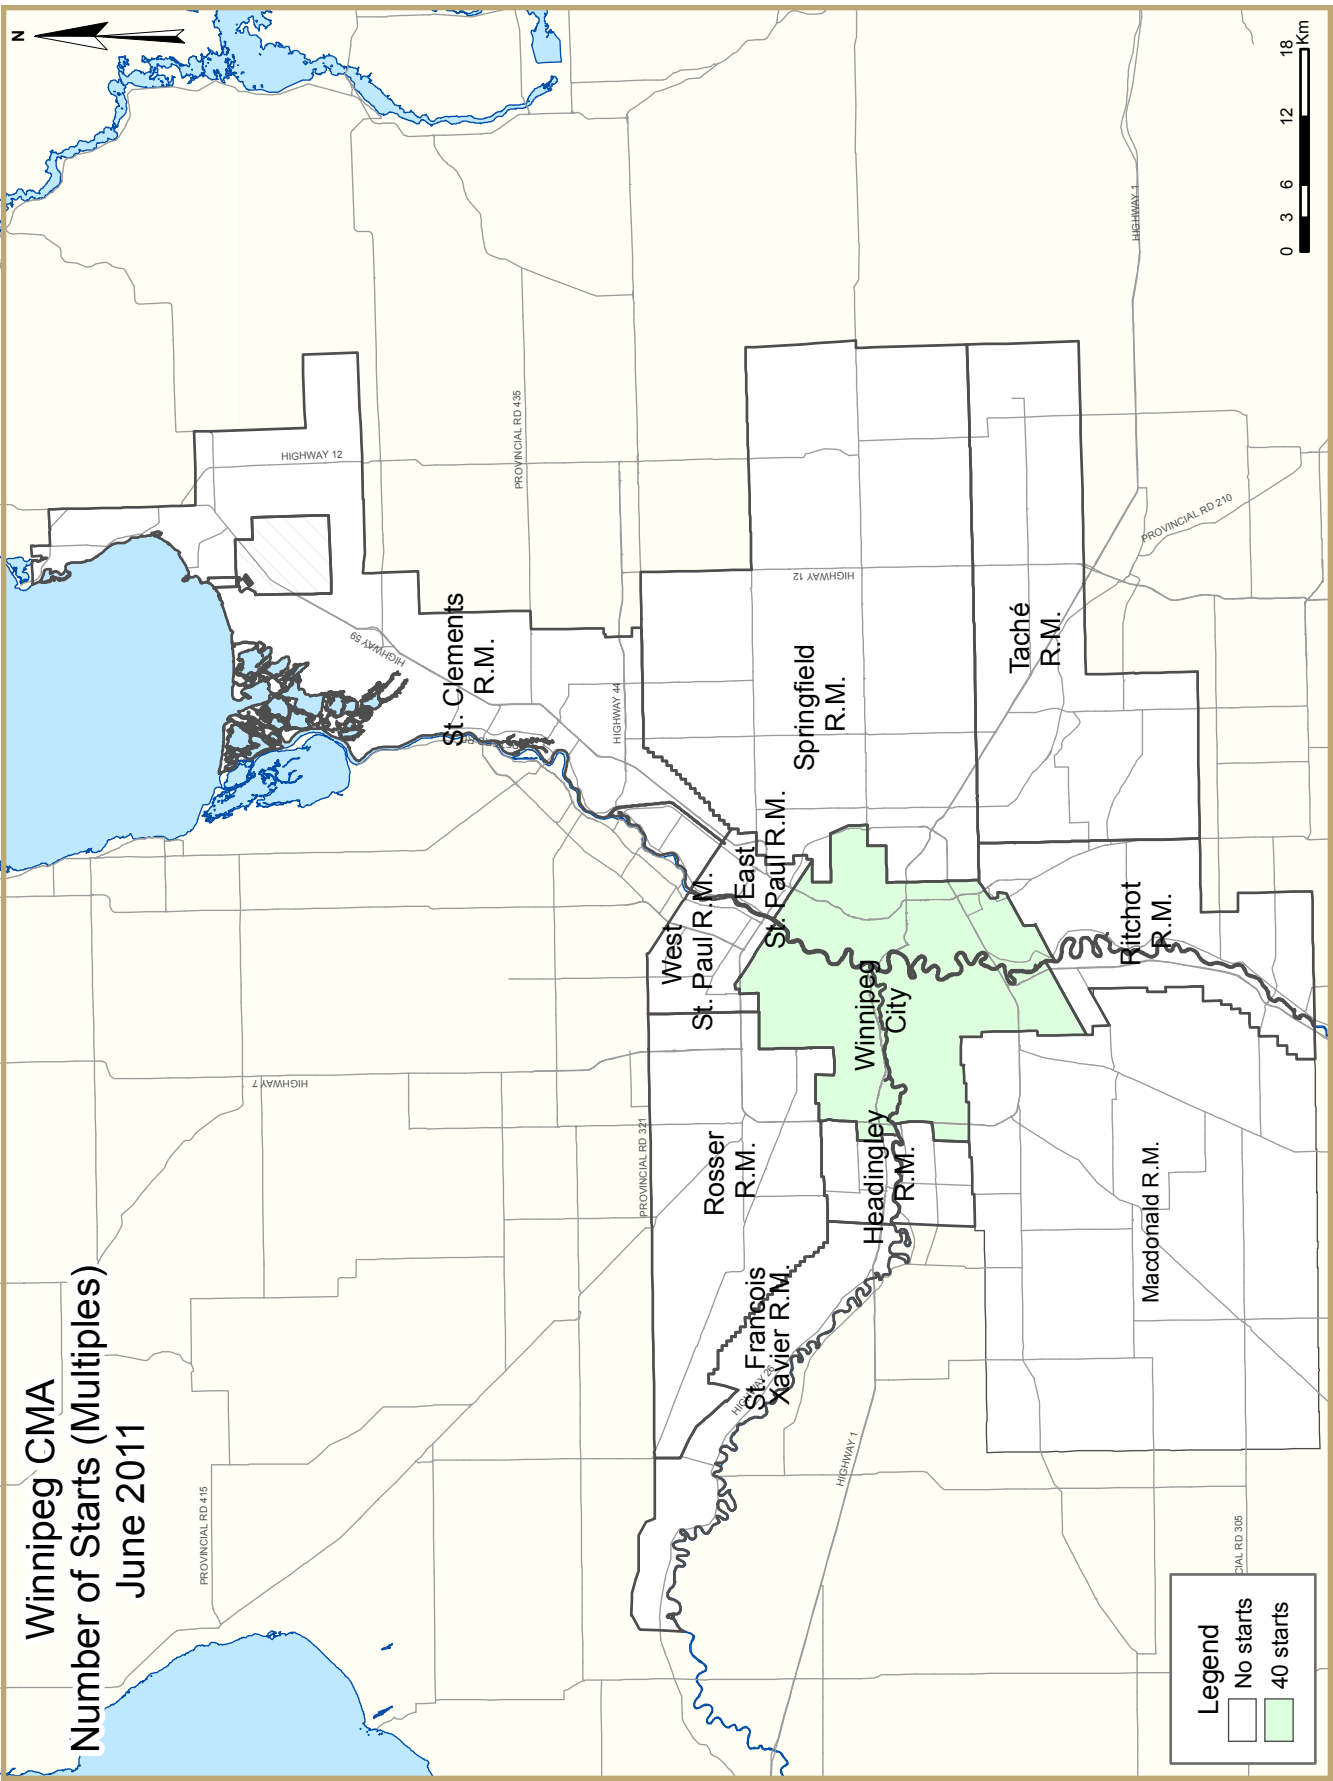

Provincial economic indicators remain positive. After a decline in 2010, manufacturing shipments are improving, showing a nine per cent year-to-date increase according to the May figures from Statistics Canada. Chemical products and machinery have shown the greatest improvement thus far. The dollar value of exports is also on the rise as global economic recovery becomes entrenched. Meanwhile, construction intentions as represented by the value of building permits, are up six per cent year-to-date with the non-residential sector posting an increase after last year's decline. In addition, there are several large construction projects already underway in the province particularly in Winnipeg.

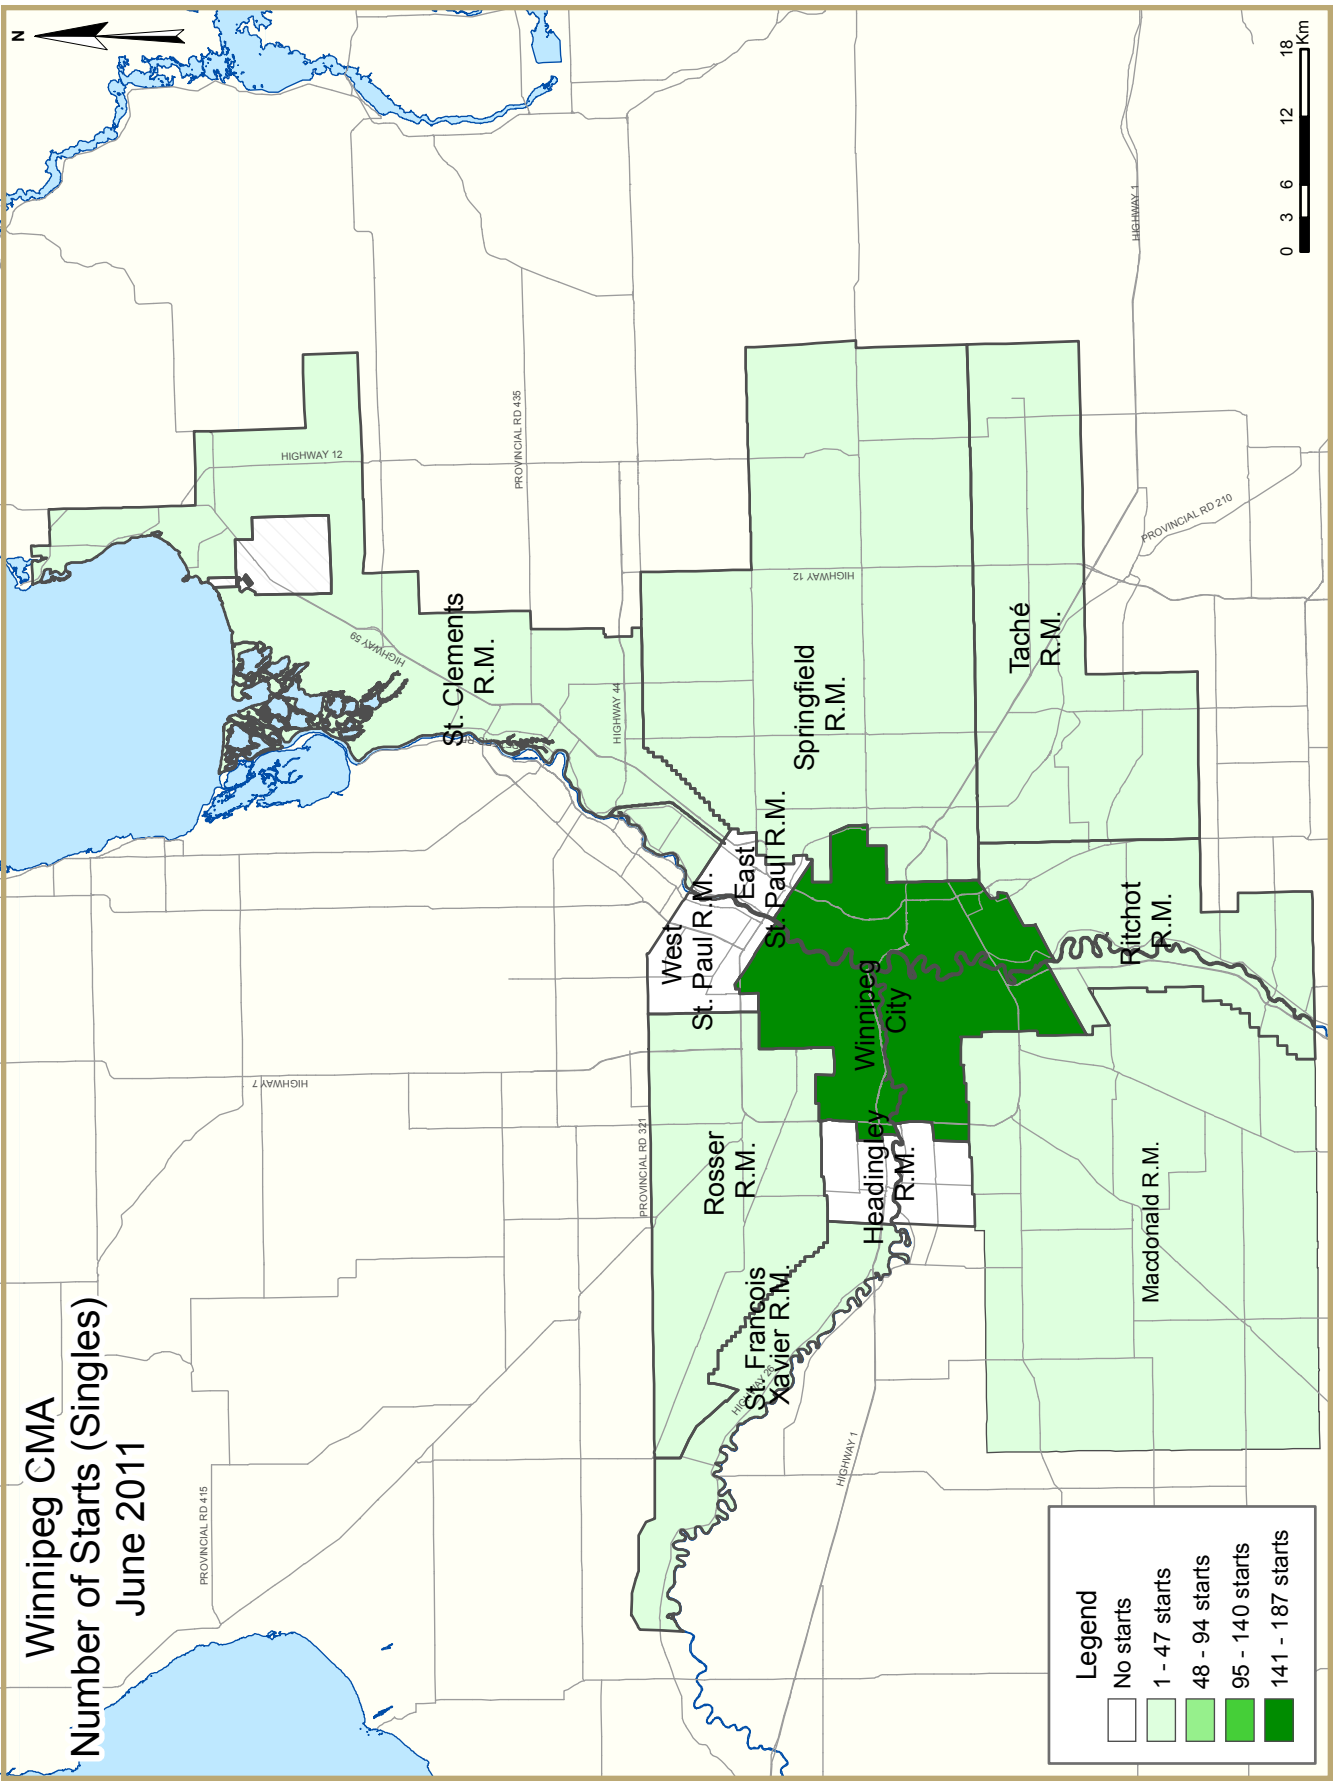

Provincial net migration saw record numbers in 2010 fuelled primarily by international immigration and lower than average interprovincial out-migration. According to Statistics Canada estimates, so far in 2011, international immigration is close to maintaining last year's levels with 2,816 net migrants in the first quarter of 2011 compared to 2,912 in the first quarter of 2010. Interprovincial migration has gone deeper into negative territory with a net loss of 1,026 people between January and March 2011, substantially more than the net loss of 46 people in the corresponding period of 2010. This resulted in a net gain of 1,762 migrants in the first quarter, 31 per cent fewer than in the first quarter of 2010.

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
