## Winnipeg CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: August 2011

## New Home Market

### Winnipeg housing starts slow in July

Home builders in the Winnipeg Census Metropolitan Area (CMA) began construction on 419 units in July, down 37 per cent from 664 in July 2010. The decrease was felt predominantly in the multiple-family sector. After seven months of activity, total starts for 2011 numbered 1,794

units, 14 per cent less than the 2,083 units recorded during the same period in 2010.

The Winnipeg CMA recorded 196 single-detached starts in July, 5.3 per cent fewer than the 207 units started in July 2010. This was, nonetheless, an impressive performance as builders were already busy with eight per cent more units under construction this July than during the same time last year. In addition, workers were challenged by several days of extreme

heat, contributing to July's slower pace of construction. Year-to-date, single-detached starts numbered 1,080 units, 1.5 per cent fewer homes than were started during the same period one year earlier. In spite of the year-over-year reduction, the current pace of activity represents the second best year-to-date total for single-detached starts since 1991.

Across the CMA, single-detached completions in July numbered 186 units, 2.8 per cent more than in July of 2010. This brings the year-to-date total number of completions to 903, up 4.4 per cent from the corresponding period in 2010. There were 196 single-detached homes

absorbed in July, an increase of 17 per cent in comparison to July of last year. Year-to-date, single-detached absorptions numbered 944 units, 12 per cent more than during the corresponding period last year. As a result, the inventory of completed and unoccupied single-detached homes at the end of July was 17 per cent lower than where it stood one year earlier. However, with a higher number of single-detached homes under construction, the total supply at the end of July stood at 1,190 units, 3.8 per cent more than at the end of July 2010. At the current six-month average rate of absorption, this represents eight months of supply.

The average price of a new single-detached home absorbed in July in the Winnipeg CMA was \$389,303, 3.6 per cent higher than in July of 2010. This brings the year-to-date average price to \$385,933, up four per cent from the prior year. Meanwhile, the median price of all absorbed single-detached homes in July was \$349,537, 3.6 per cent greater than it was during the corresponding period of last year. The \$275,000 to \$324,999 price range maintained the greatest market share to-date at 28 per cent, almost identical to last year.

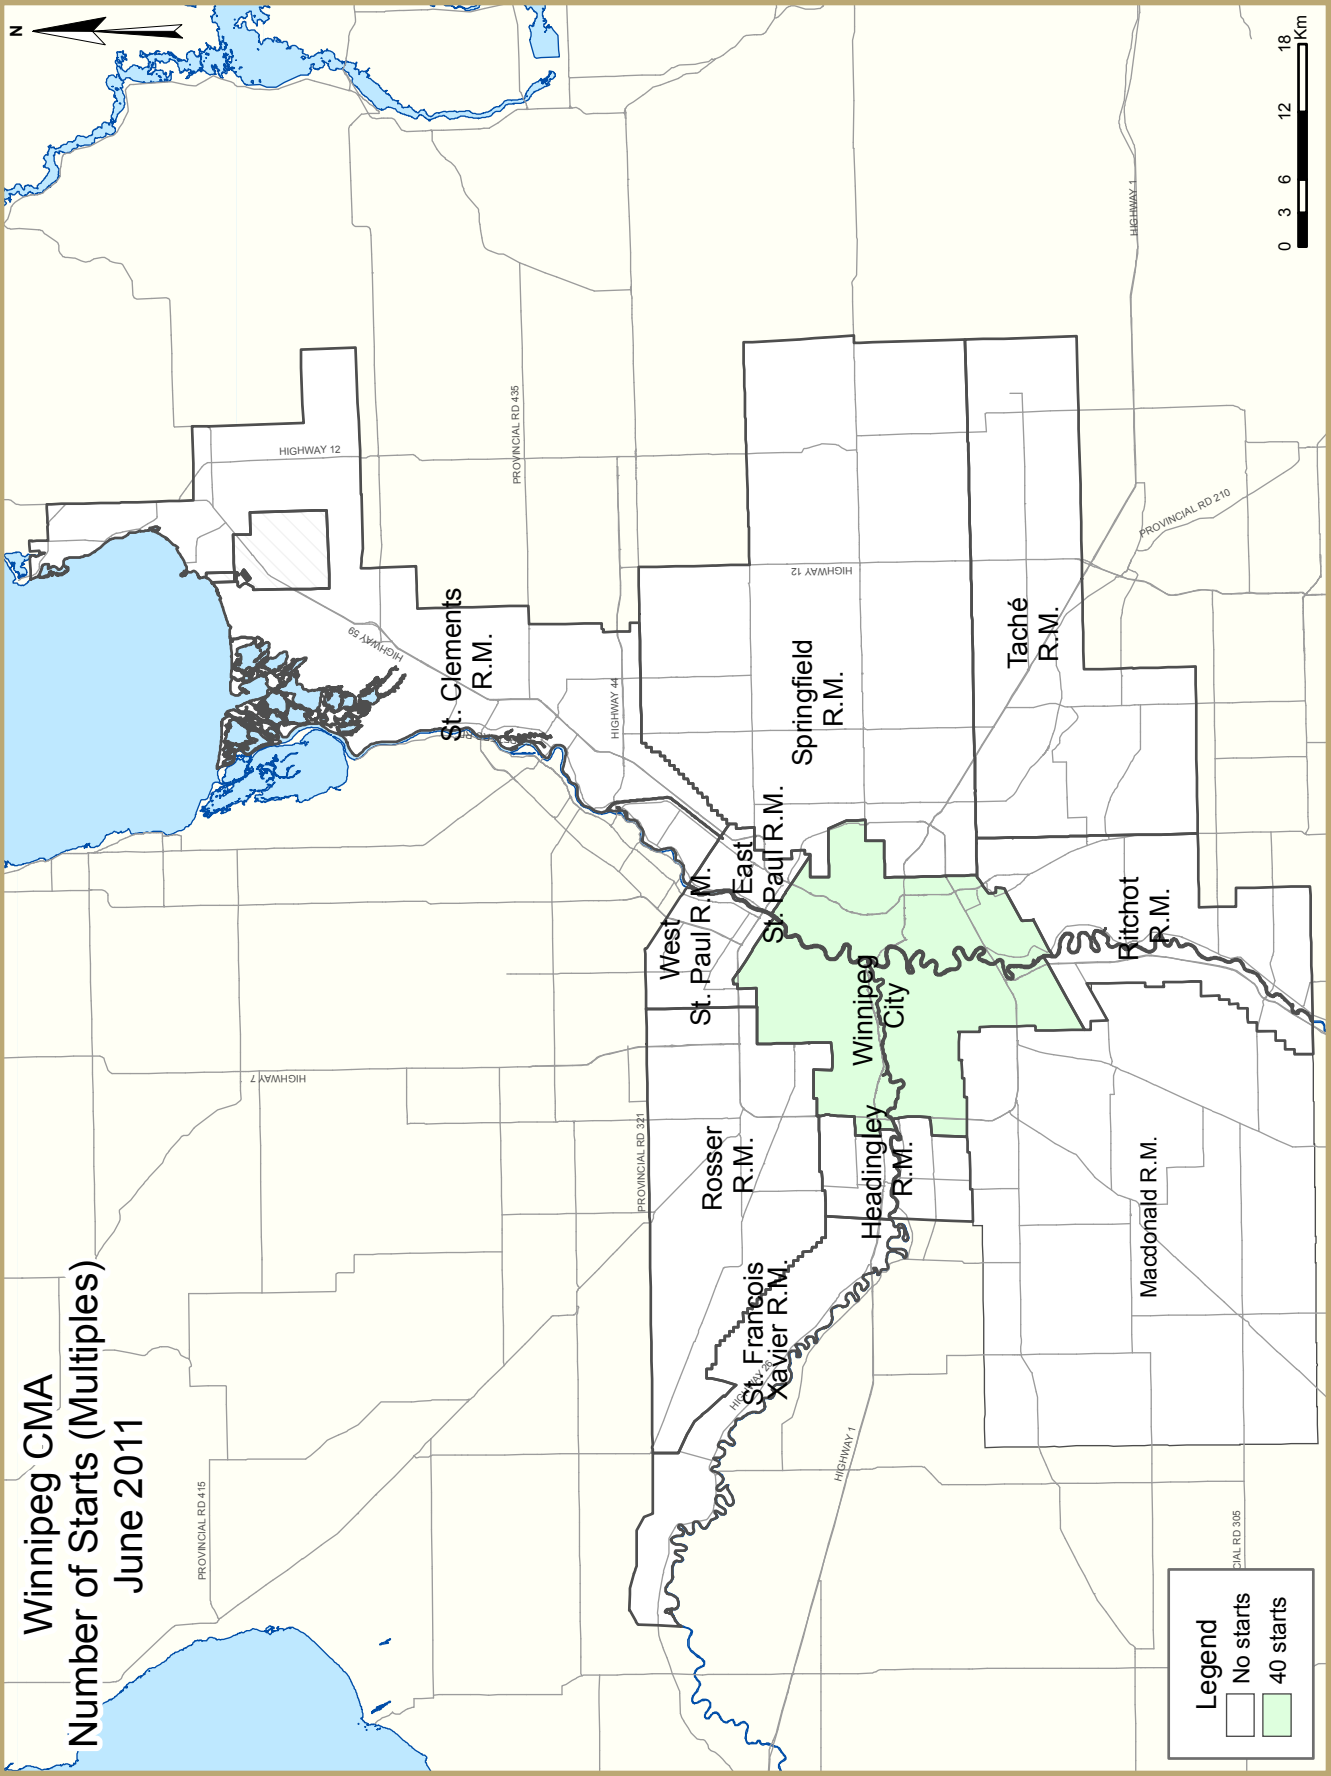

The multi-family sector, which includes semi-detached units, rows, and apartments, saw 223 units break ground in July, less than half the 457 units started one year earlier. Last year's figure, however, represented the best monthly performance for multi-family starts since 1987 and proved difficult to surpass. As a result of this slower performance, a total of 714 multiple-family units have been started year-to-date, 28 per cent fewer than the 987 units started a year earlier. While less than last year's corresponding tally, the year-to-date total is still the third highest out of the last 23 years. So far this year, rental starts continue to dominate activity with 66 per cent of all multi-family starts intended for that market.

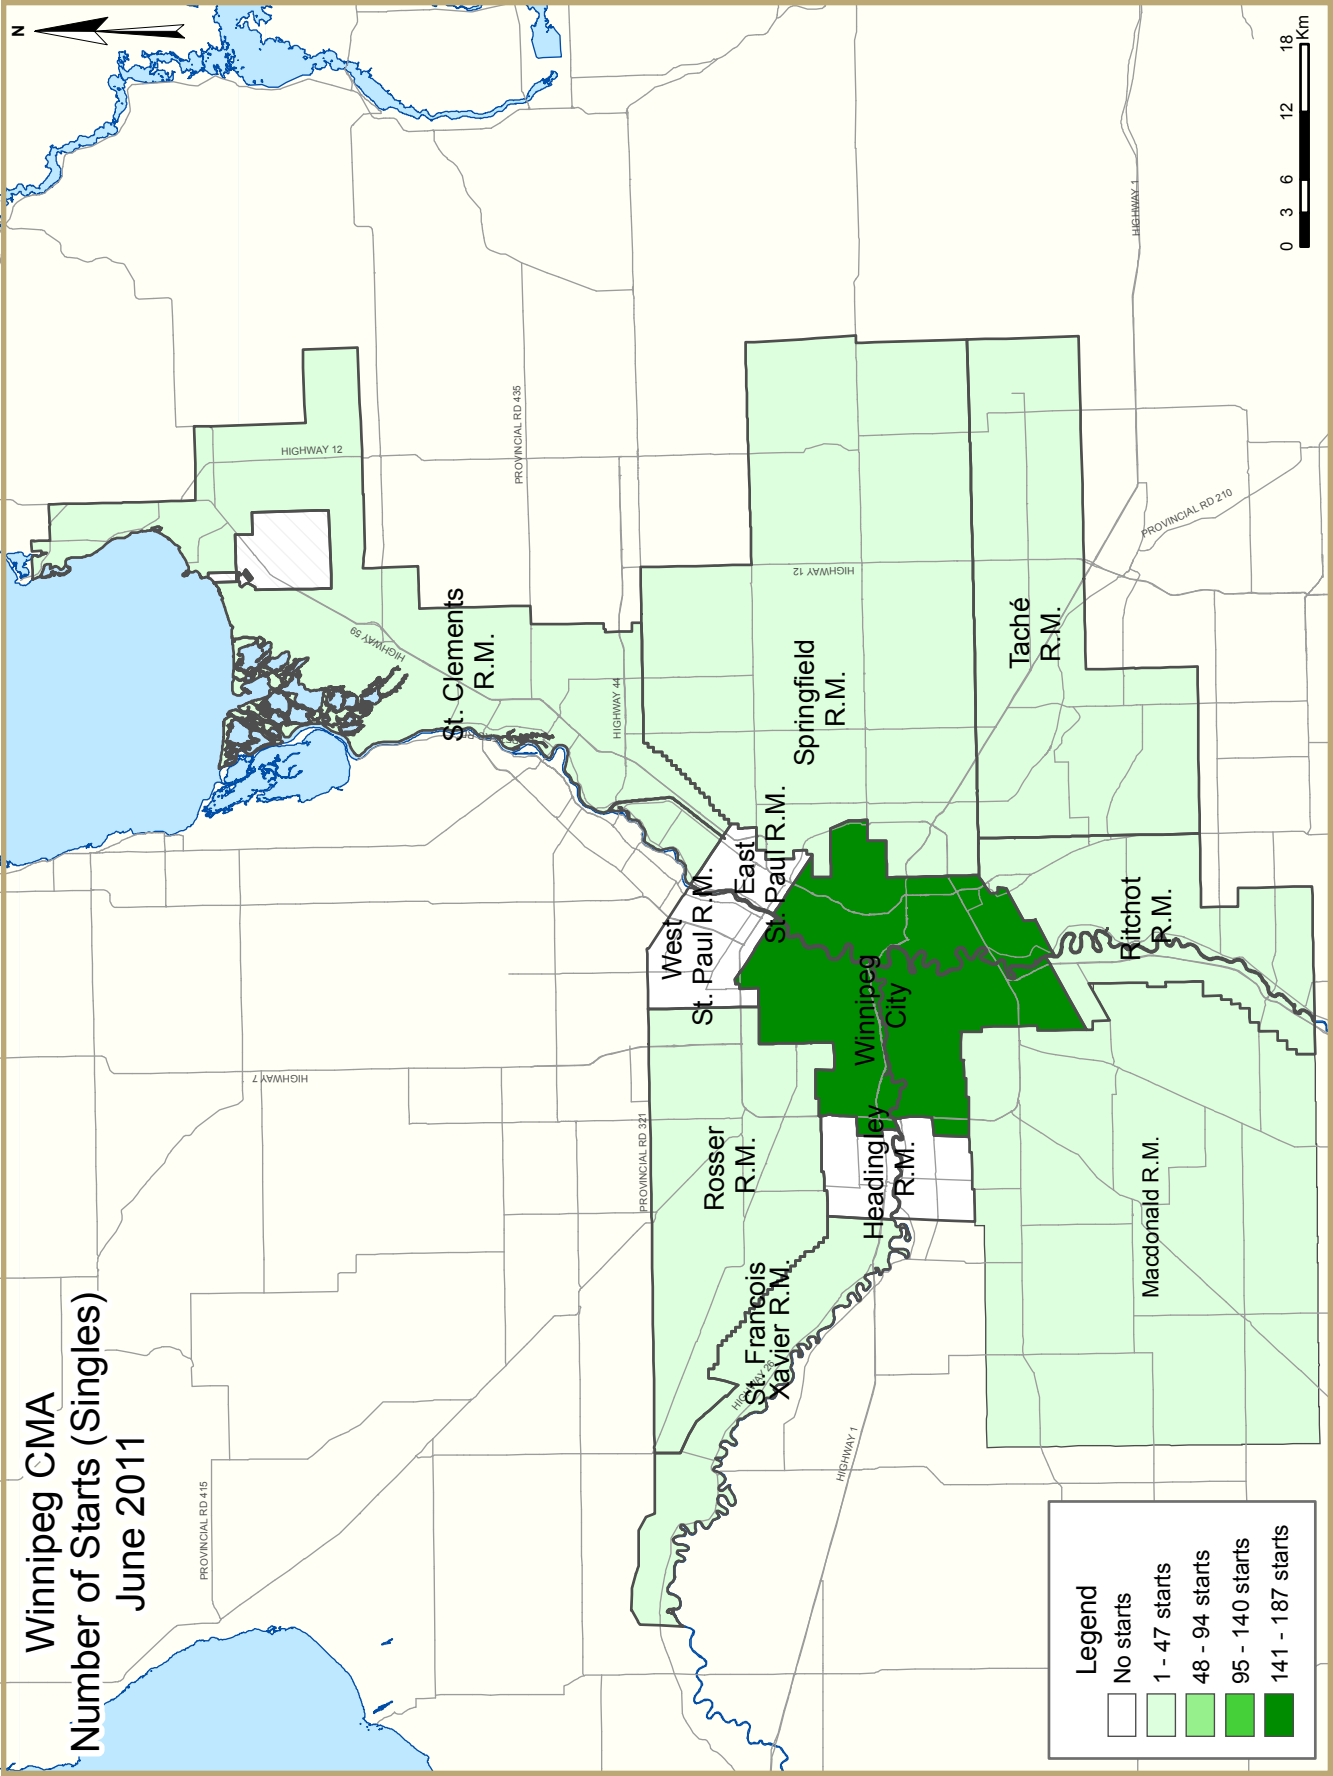

Meanwhile, there were 26 multi-family units completed during the month of July, bringing the total number of units completed during the first seven months of the year to 538 units, 81 per cent more than corresponding levels 2010. There were 111 multi-family units absorbed in July 2011, substantially more than the 18 units absorbed in July 2010. This brings the total number of units absorbed year-to-date to 519 units, 39 per cent more than the number of units absorbed over the corresponding period last year. As a result, the inventory of multi-family units completed and not absorbed in July declined to 137 units, 10 per cent lower than in July 2010. Total supply however, which includes units under construction, stood at 1,594 units at the end of July, 14 per cent higher than the previous year.

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
