

HOUSING NOW

Atlantic Region

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: First Quarter 2011

Positive Fourth Quarter Activity

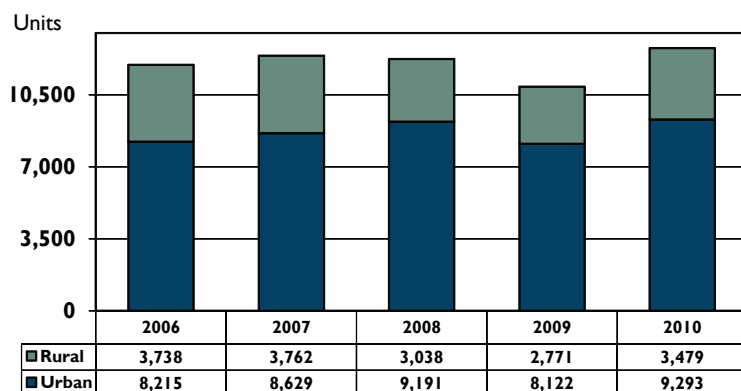

Total housing starts in the fourth quarter increased close to four per cent when compared to the same period in 2009. The gain in starts for the fourth quarter was due to stronger starts activity in two of the four Atlantic Provinces - Nova Scotia (NS) and New Brunswick (NB).

In NB, starts were up over 18 per cent in the fourth quarter due to significant growth in multiple starts. There was a 71 per cent advance in multiple starts in the fourth quarter of 2010 compared to the same quarter of 2009. Single starts declined close to 12 per cent in the fourth quarter.

NS saw an increase of close to 14 per cent in starts in the quarter due to a gain of 78 per cent in multiples. Single starts were down close to nine per cent for the quarter.

Figure 2

Atlantic Canada Housing Starts by Type January-December

Source: CMHC

Activity in Newfoundland and Labrador (NL) was down by 9.4 per cent due to a decrease in single starts of close to 13 per cent. This was partially offset by a 7.6 per cent rise in multiple starts activity.

Prince Edward Island (PE) reported a decline in growth of 31 per cent in the quarter due to a 41 per cent drop in single starts and a decline of 23 per cent in multiple starts.

Growth Due to Rise in Multiple Starts

Multiple starts were up approximately 43 per cent in the fourth quarter. Only PE contributed negatively to the results in the quarter due to a drop in both apartment and semi-detached starts.

Multiple starts activity included a significant increase of 57 per cent in apartment construction in 2010. Semi-detached starts also gained over 25 per cent last year while row starts showed positive growth of 9.3 per cent.

Mixed Urban Starts Activity

Of the six large urban centres in Atlantic Canada, two reported positive growth in starts activity for the quarter. Four centres reported decreases in the quarter,

including Fredericton at -39 per cent, Charlottetown at -36 per cent, Saint John at -32 per cent, and St. John's at about -6 per cent.

The best performance in the quarter came from Moncton with a 50 per cent increase. This was followed by a 39 per cent advance in growth for Halifax.

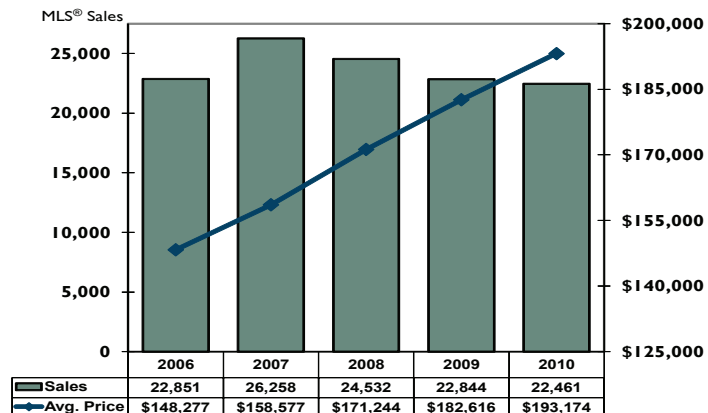

For the year, Moncton was up 44 per cent, Halifax was up 38 per cent and St. John's was up 9.4 per cent.

Saint John was down marginally in 2010 by less than one per cent, whereas Fredericton was down 39 per cent and Charlottetown fell 23 per cent.

Six of the smaller centres in Atlantic Canada reported higher starts in the fourth quarter, including Gander, Grand Falls-Windsor and Corner Brook, NL; Summerside, PE; as well as Chester and New Glasgow, NS.

Figure 3

MLS® Sales Activity – Atlantic Canada Yearly Comparison (January – December)

Source: Canadian Real Estate Association - MLS® is a registered trademark of the Canadian Real Estate Association. MLS® Average Price: Annual Data, Price for each year unadjusted

There were 3,546 completions in Atlantic Canada in the fourth quarter compared to 3,660 completions in 2009. Units under construction for the same period also grew by 20 per cent.

MLS® Sales Continue to Decline

MLS® sales in Atlantic Canada were down 6.9 per cent in the fourth quarter (unadjusted) compared to a year ago. Weakness in the fourth quarter occurred in three of the Atlantic Provinces, including NL with a 20 per cent decrease and NB, where activity was down close to eight per cent compared to a year ago. Sales activity in NS declined less than one per cent in the fourth quarter. In PE, sales in the fourth quarter increased close to six per cent compared to a year ago.

MLS® Price Growth Slowed During Fourth Quarter

The average MLS® price in Atlantic Canada was up 3.8 per cent (unadjusted) in the fourth quarter to \$190,888, with prices up 5.8 per cent in 2010 to \$193,174.

Provincially, unadjusted prices in 2010 were up 14 per cent in NL, close to five per cent in NS, 1.5 per cent in NB and just under one per cent in PE.

The number of listings reported to the end of December 2010, on an unadjusted basis, was up 2.5 per cent compared to 2009.

Economic Factors

The labour force was flat, increasing by 0.3 per cent in the fourth quarter in Atlantic Canada (seasonally adjusted). There was a mere 0.1

per cent gain in total employment during the quarter.

Overall the unemployment rate in Atlantic Canada dropped to a 10.5 per cent rate in 2010, compared to a 10.6 per cent unemployment rate in 2009.

The economic forecast remains on track to be positive in 2011, but growth is forecast to be weaker than in 2010, as some economic factors such as the dollar, oil prices and only moderate employment gains will limit growth.

For NL, oil production and energy and mining activity will continue to be the main sources of growth. Major capital investments continue to inject stimulus into the economy and will contribute to a positive outlook.

For PE, moderate growth is expected over the forecast period. Information technology and biosciences will continue to be the focus in helping to diversify the Island's economy.

For NS, economic growth for the province continues to remain positive over the forecast period, although a decline in spending from energy and energy-related investment activities will result in a slowdown in the level of growth overall.

Economic growth in NB will remain the weakest among the four Atlantic provinces over the forecast period. Although higher prices in the energy sector, as well as some improvement in potash prices will contribute to a rebound in exports in 2011, the overall economic outlook will be affected by reduced investment in major projects.

HOUSING NOW REPORT TABLES

Available in **ALL** reports:

- 1 Housing Activity Summary of Region
- 2 Starts by Submarket and by Dwelling Type – Current Quarter
- 2.1 Starts by Submarket and by Dwelling Type – Year-to-Date

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
