

# HOUSING NOW

## Victoria CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: July 2011

### New Construction: 1st Half Housing Starts Below 10-year Average

Through the first half of 2011, construction started on 744 new homes across the Victoria Census Metropolitan Area (CMA).

A slowdown in single-detached home

building was a major reason why the number of year-to-date housing starts fell below the ten-year average of 903.

Over the previous ten-year period (2001-2010), an average of 400 single-detached homes were started during the first half of the year. This year, 290 single-detached starts were recorded across the CMA, with Langford accounting for 50 per cent of all activity. The number of single family

homes under construction fell by 20 per cent compared to June 2010. The total number of homes under construction was down six per cent.

While residential construction has slowed, the inventory of completed and unabsorbed new homes has increased eight per cent relative to the June 2010 level. Through the end of June, the Victoria CMA inventory consisted of 425 new homes – 282 apartment condominiums, 61 single-detached homes, 76 attached homes,<sup>1</sup> and 6 rental units.

Despite an increased inventory of single-detached homes and a reduction in new construction activity, the median new house price in the Victoria CMA has increased five per cent in 2011 (Jan.-Jun. 2011: \$608,700). Rising prices were recorded in both Langford (Jan.-Jun. 2011: \$499,900) and Saanich (Jan.-Jun. 2011: \$869,900), the CMA's two most active regions for single-detached home construction. While both markets experienced higher prices, the gap between median prices in these two markets increased to \$370,000.

<sup>1</sup> Attached homes includes semi-detached and row homes.

## Resale Market: Demand has Moderated

Like new construction activity, resale demand in Victoria slowed during the first half of 2011.<sup>2</sup> The Canadian Real Estate Association (CREA) reported that 3,079 MLS® sales were recorded over the first six months of the year, the lowest level since 2000 and down 22 per cent from the historical ten-year average (2001-2010).

Reduced demand combined with a 15-year high in the number of active MLS® listings have kept prices relatively flat across the Victoria market. The average MLS® price recorded during the second quarter of 2011 was \$514,003 – only 0.2 per cent below the average price recorded during the same period last year. While the overall price remained more or less unchanged, some price movement occurred across the different home types, most notably townhomes. (see Table 1).

**Table 1<sup>3</sup>: Average MLS Price, Victoria**

Type	Q2 2011	Change from Q2 2010
Single-family residential	\$591,743	-1.2 per cent
Townhouse	\$463,070	+5.7 per cent
Apartment	\$333,769	+0.6 per cent
CREA total	\$514,003	-0.2 per cent

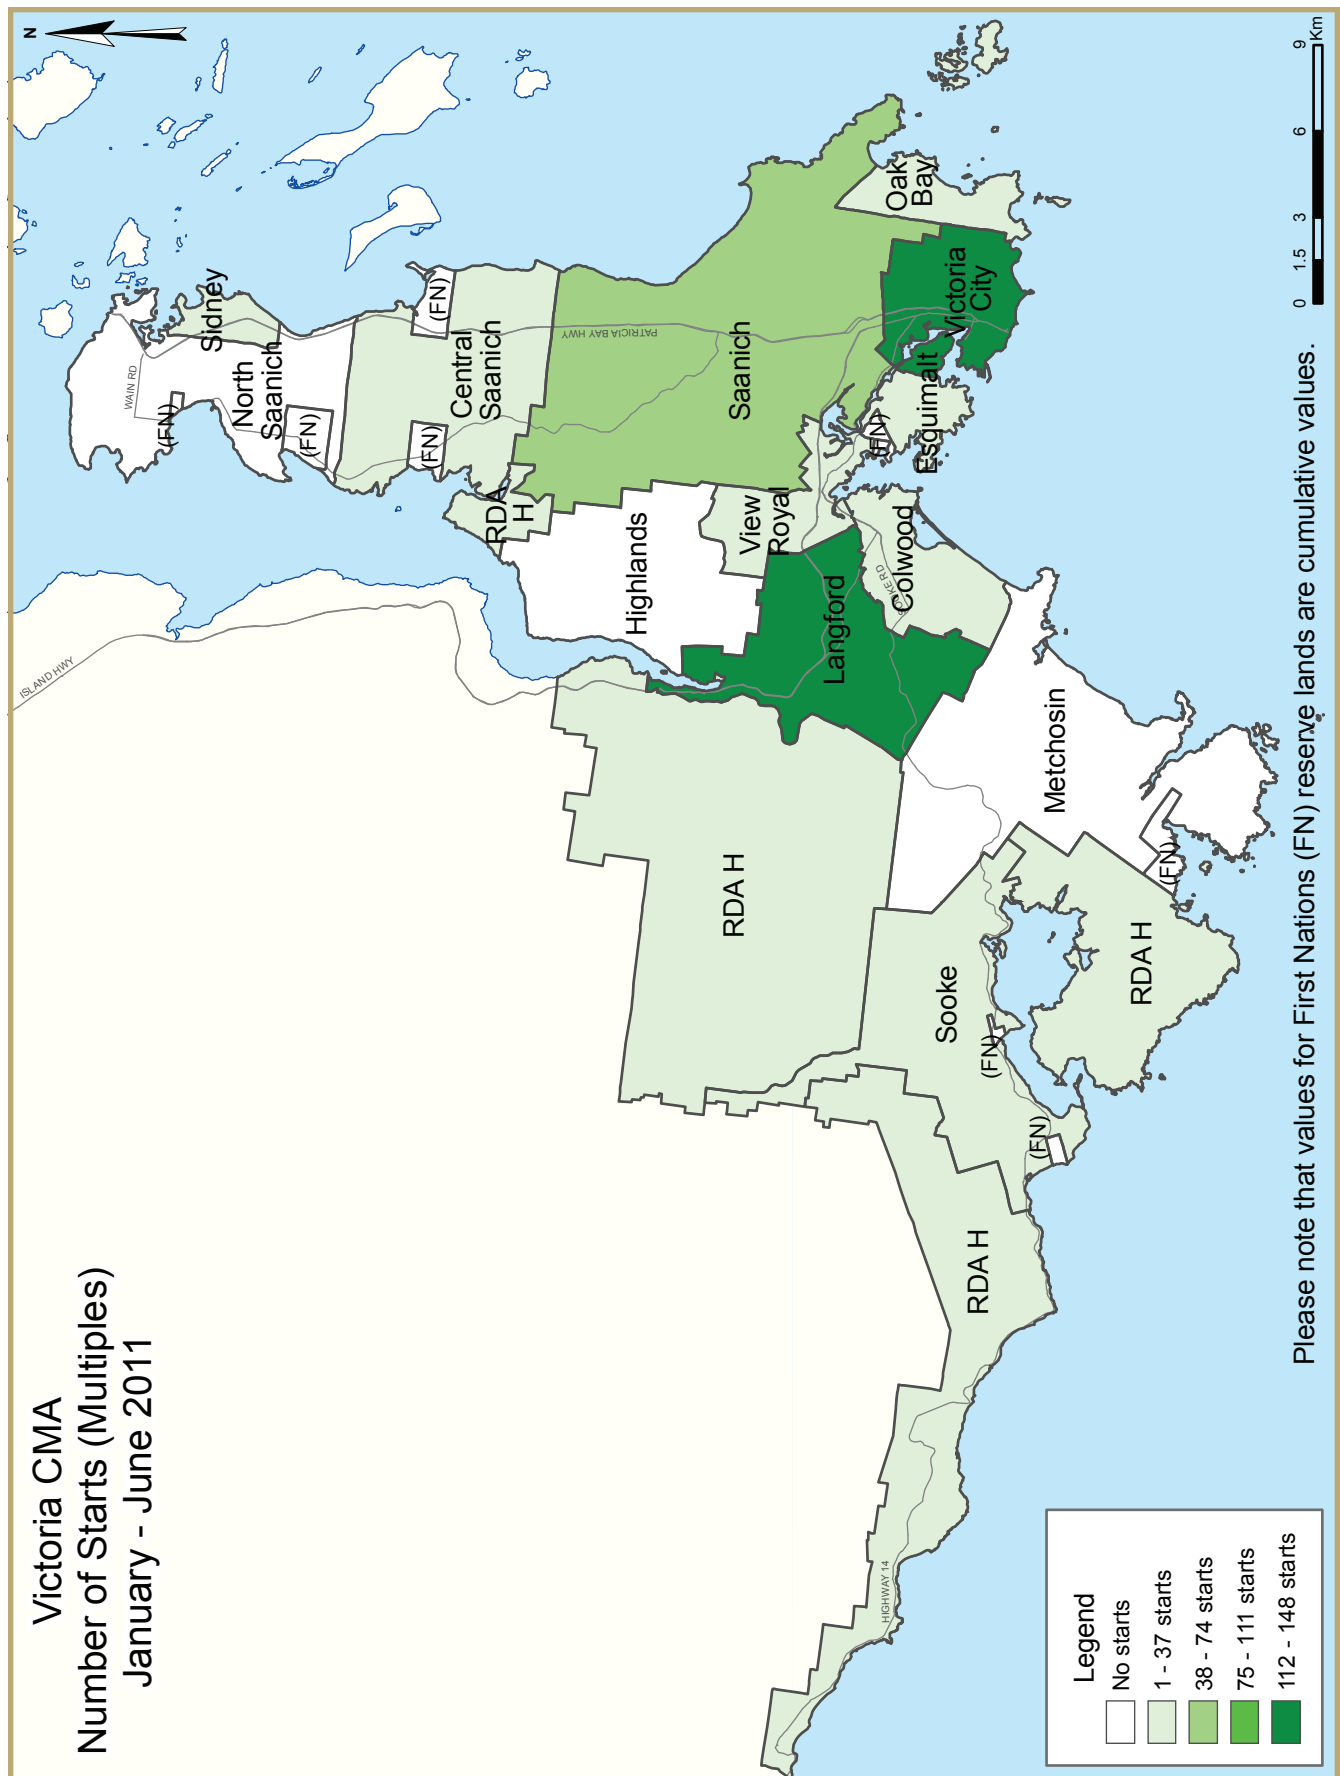

<sup>2</sup> Note: The Victoria resale market refers to the area served by the Victoria Real Estate Board (VREB).

<sup>3</sup> Source: VREB and CREA. Note that the CREA total price includes all residential dwelling types.

## HOUSING NOW REPORT TABLES

### Available in ALL reports:

- 1 Housing Activity Summary of CMA
- 2 Starts by Submarket and by Dwelling Type – Current Month or Quarter
- 2.1 Starts by Submarket and by Dwelling Type – Year-to-Date
- 3 Completions by Submarket and by Dwelling Type – Current Month or Quarter
- 3.1 Completions by Submarket and by Dwelling Type – Year-to-Date
- 4 Absorbed Single-Detached Units by Price Range
- 5 MLS® Residential Activity
- 6 Economic Indicators

### Available in SELECTED Reports:

- 1.1 Housing Activity Summary by Submarket
- 1.2 History of Housing Activity (once a year)
- 2.2 Starts by Submarket, by Dwelling Type and by Intended Market – Current Month or Quarter
- 2.3 Starts by Submarket, by Dwelling Type and by Intended Market – Year-to-Date
- 2.4 Starts by Submarket and by Intended Market – Current Month or Quarter
- 2.5 Starts by Submarket and by Intended Market – Year-to-Date
- 3.2 Completions by Submarket, by Dwelling Type and by Intended Market – Current Month or Quarter
- 3.3 Completions by Submarket, by Dwelling Type and by Intended Market – Year-to-Date
- 3.4 Completions by Submarket and by Intended Market – Current Month or Quarter
- 3.5 Completions by Submarket and by Intended Market – Year-to-Date
- 4.1 Average Price (\$) of Absorbed Single-Detached Units

### SYMBOLS

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
