HOUSING MARKET INFORMATION

HOUSING NOW Greater Toronto Area

Date Released: January 2011

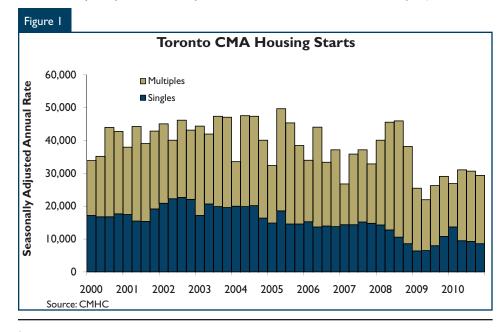

New Home Market

Starts held back by high-rise delays and low-rise supply

Housing starts in Toronto moved slightly lower during the second half of last year following a period of partial recovery from the lows of early 2009. Still, fourth-quarter starts held fairly steady and were just five per cent below the post-recession peak of 31,000 units¹ reached in Q2 2010. Overall housing starts for 2010 increased by 13 per cent compared

to 2009, yet remained about a quarter below the average level over the previous decade (about 40,000 units).

High-rise starts bucked the trend in the fourth quarter and improved slightly from the summer months thanks to the strongest November on record for this housing type. Nonetheless, construction starts for high-rise buildings remained relatively muted in comparison to the high volume of condominium units sold over the past 18 months. A look at the individual projects

Seasonally-adjusted annual rate of housing starts.

beginning construction during the last quarter reveals that the construction industry is still dealing with the queue of projects that began their sales campaigns in the period leading up to the onset of the recession in late 2008. The construction of these projects was put on hold as developers waited for sales levels to pick up and financing conditions to improve. As the backlog clears and more units continue to come to completion (a record 15,000 condo apartments were completed in 2010), more resources can be allocated to begin working on the 20,000 new units that opened last year. With a typical lag of 12-18 months to construction start, the surge of new condo site openings and sales in the fourth quarter of 2010 suggests highrise builders will have their hands full well into 2012.

The construction of single-detached homes, on the other hand, appears to have had its better days in the past. Starts for singles trended lower throughout 2010, with fourth quarter seasonally-adjusted levels off by close to 40 per cent from the beginning of the year. New construction has been held back by a significant cooling in single-detached sales last year — by the third quarter sales numbers were touching levels achieved during the recession. The responsibility rests mostly on the supply side. According to data collected by RealNet Canada Inc., the inventory of single-detached lots ready for development averaged roughly 5,000 in 2010, which is about half the number from five years ago. Furthermore, the standing inventory of completed and unoccupied units ended 2010 at a 20-year low. Limited supply has steadily pushed prices up to the point where the average price for a new single-detached home in the GTA currently sits at \$600,000. It's not surprising that when new

and relatively more affordable supply opens up, as it did in the fourth quarter, sales respond quickly.

Resale Market

Sales trend moves back up

After bottoming out in July, seasonallyadjusted resale transactions continued to climb in the fourth quarter. The annualized rate came in at 85,000 units — up 15 per cent from the third quarter and very much in line with the longer-term trend. Demand for existing homes proved resilient as buyers took advantage of the extended low interest rate environment. The stabilization of sales in the final months of the year helped the total for 2010 come in just shy of the 2009 level and represented the third-best year on record for the resale market.

The dollar volume of home sales last year (which accounts for both the number of transactions and selling prices) reached an all-time high of \$38 billion — six per cent above the previous record set in 2007.

The industry can thank the nine per cent rise in average selling prices in 2010 for this feat, with the fourth quarter seasonally-adjusted price trend resuming its upward march after a brief pause during the summer. Part of the strength in selling price statistics can be related to a higher share of above-average priced homes sold. Sales of homes valued above \$750,000 grew by 30 per cent in 2010, including a 35 percent rise in sales of \$1.5 million-plus homes (more than 1,000 were sold in the GTA last year). Price growth in the final months of the year was also supported by a slight imbalance between demand and supply, as new listings continued to move lower while sales sped up. This is consistent with a relatively higher level of first-time buying activity, likely encouraged by a reduction in the mortgage qualifying rate (five-year posted) to its lowest level on record, as well as improved labour market conditions and rising immigration.

Continued interest from firsttime buyers, as well as investors and down-sizing empty nesters, helped produce the best year ever

² MLS® is a registered trademark of the Canadian Real Estate Association (CREA).

for condominium apartment sales. Condos represented one-quarter of all homes sold in the GTA last year, up from one-fifth in the earlier part of the past decade. The shift towards condominium purchases in the fourth

quarter helped stabilize prices, after supply pressures coming from a rise in listings from newly completed buildings eased the median price trend throughout most of the year. The number of active listings for

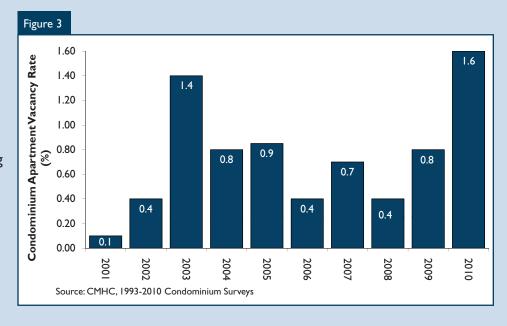

condos ended the year at a normal level, suggesting balanced market conditions. However, the situation should continue to be monitored, as a high number of units are expected to be completed throughout the year.

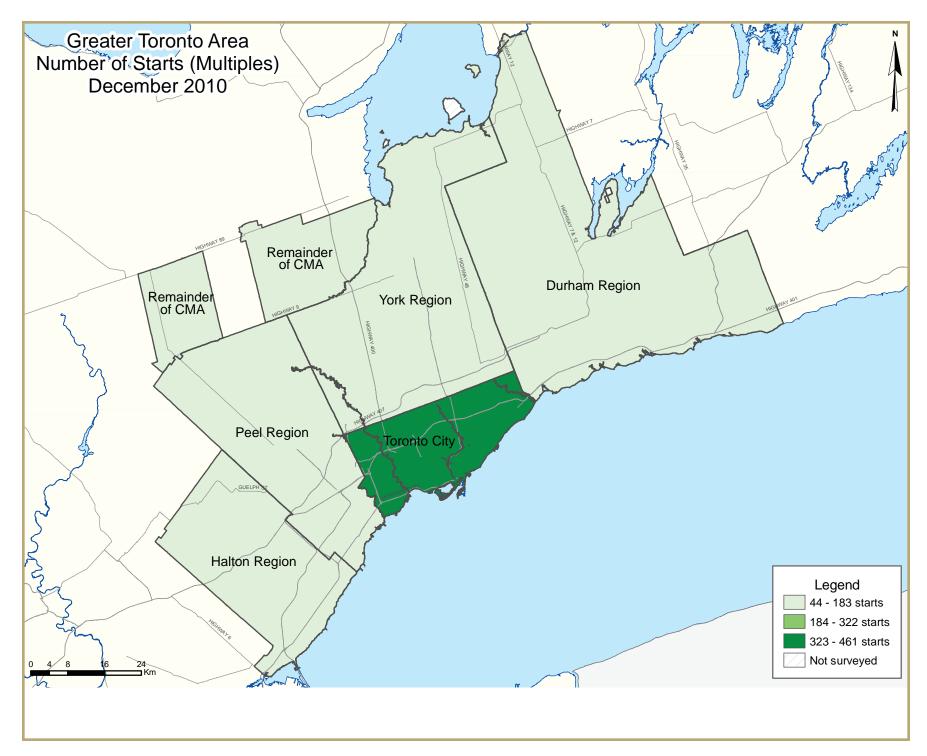

Vacancy Rates for Condo Rentals on the Rise

In addition to increasing resale listings, rising condominium completions also add supply to the rental stock. Last year the greater supply of units available for rent came at a time when many condo

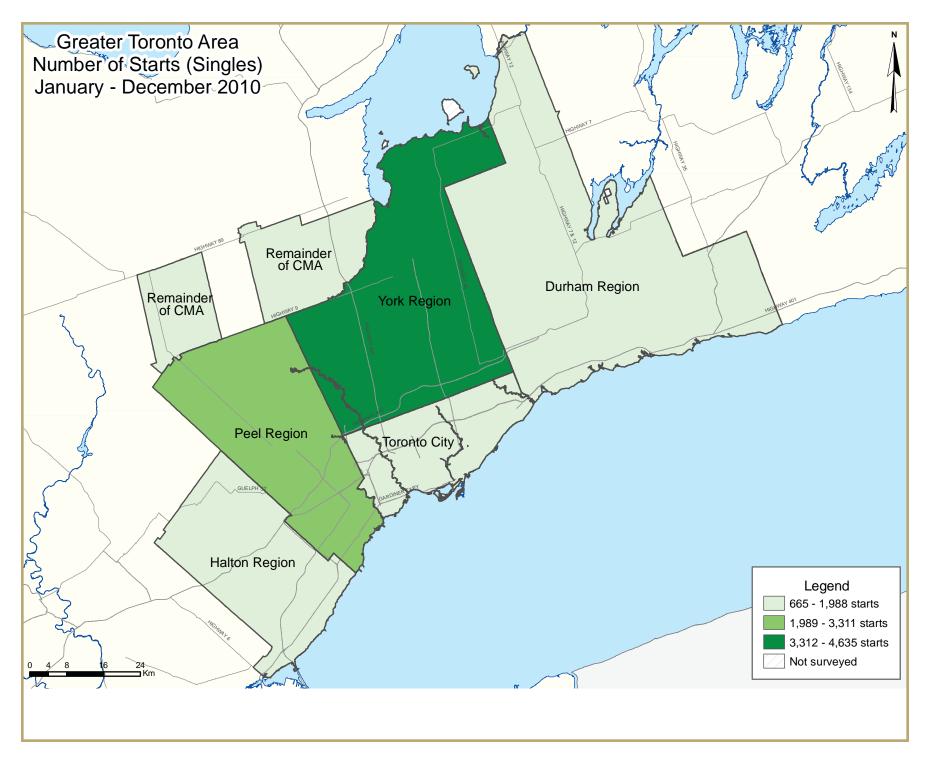

dwellers chose to buy instead of rent. The relative cost of renting versus owning a condo increased as the average rent for a one-bedroom unit rose by nine per cent to roughly \$1,400 per month — which was only \$100 less than the all-cost associated with owning the same sized unit. The result was an increase in the average vacancy rate for condominium apartments to 1.6 per cent — double the rate registered a year earlier and the highest level recorded since CMHC began its survey of the

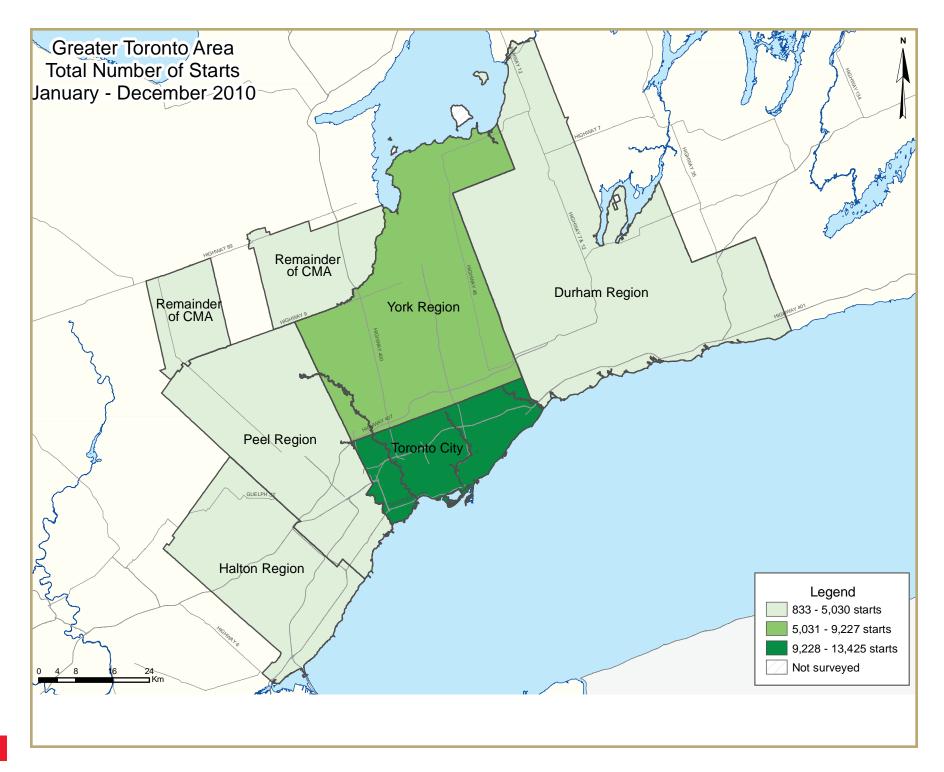

condominium rental market in 1993. It is important to note, however, that vacancy rates for condo rentals still remain low by any measure, and below that of the primary rental market.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
