

HOUSING NOW

Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: April 2011

New Home Market

Fewer housing starts across the Edmonton region in March

Despite an increase in new apartment activity, total housing starts in Greater Edmonton decreased in March compared with the same month last year. This performance represented

the sixth consecutive month of year-over-year declines. Housing starts in the Edmonton Census Metropolitan Area (CMA) totalled 713 units in March, down from 813 units in the third month of 2010. For the year-to-date, total housing starts reached 1,565 units, down from 2,032 starts in the first quarter of last year.

There were 236 single-detached homes started across Metro

Edmonton in March, for a decrease of 54 per cent from March 2010. To the end of the first quarter, builders poured foundations for 801 units, representing a decline of 43 per cent from the first three months of 2010. CMHC looks for production levels to improve in the coming months when new and resale inventories are expected to begin trending downward.

Single-detached completions amounted to 463 units in March, for a 33 per cent increase over this time last year. While absorptions rose in March by 21 per cent year-over-year to 425 units, they failed to keep pace with completions for the eighth month in a row. Unabsorbed inventory, including show homes, stood at 625 units in March, up 55 per cent from a year prior. This represents the highest level of completed and unoccupied singles across the region since June 2009. However, with units under construction in March down by 11 per cent from March 2010, completion levels should begin to subside in the coming months and this will help curb further inventory expansion.

The average price for single-detached homes absorbed in March rose by nine per cent year-over-year to \$506,520. To the end of the first quarter, the average absorbed price stood at \$502,140, up seven per cent from January to March of last year. Some of the increase is compositional, as fewer homes so far this year were absorbed at prices below \$450,000 compared with the first quarter of 2010. Readers are cautioned that absorbed prices in many cases represent the price negotiated prior to the start of construction. Meanwhile, contractor selling prices reported by Statistics Canada's New House Price Index (NHPI) increased in Edmonton by 1.1 per cent on a year-over-year basis in February.

Multiple unit starts, which consist of semi-detached, row, and apartments units, increased on a year-over-year basis in March by 59 per cent to 477 units. A strong increase in apartment starts helped to counter lower semi-detached and row unit activity. The lion's share of multi-unit activity occurred within the city of Edmonton, bolstered by a 237 unit rental project

in the downtown. On a year-to-date basis, multiple dwelling starts strengthened by 20 per cent to 764 units compared with 638 units recorded in January to March of 2010.

Multiple dwelling completions decreased by 10 per cent year-over-year in March to 180 units. Absorptions in March outpaced completions by five units, allowing inventories to edge lower from the previous month. At 1,002 units, the inventory of completed and unoccupied multiple units was four per cent higher than this time last year. In the past three months, the inventory has averaged 992 units compared with an average of 1,023 during the first three months of 2010. With units under construction in March up by six per cent from this time last year, the prospects for a quick reduction in multiple unit inventory seems unlikely.

Resale Market

Buyers maintain advantage in 1st quarter

A combination of higher inventories and slower sales in the first quarter helped buyers maintain the advantage they held during the final three months of 2010. Following a 14 per cent year-over-year decrease during the fourth quarter of 2010, residential MLS® sales fell by almost nine per cent during the first three months of 2011 compared to the same time frame in 2010.

Active listings in the first quarter averaged 6,336 units, 11 per cent higher than the average number of homes for sale on the MLS® during January to March of 2010. Although new listings decreased by just over seven per cent year-over-year in the first quarter, the average inventory

level was higher this year due to lower sales. The ratio of sales-to-active listings averaged 17 per cent in the first three months of 2011 compared with an average of 21 per cent in the same period in the previous year. With less than one in five active listings selling in a given month in the first quarter, most homes spent more time on the market than a year prior. The average listing period in March was 50 days, up 22 per cent from 41 days a year prior.

With homes taking longer to sell, prices have been under less upward pressure. The average MLS® residential price decreased in the first quarter by 2.6 per cent to \$319,314. According to the Realtors® Association of Edmonton (RAE), a typical single-detached home sold in the first three months of 2011 for an average price of \$366,057, three per cent below the \$377,843 average reported in the same period of 2010. Condominium prices experienced larger price reductions in the early months of 2011, as Realtors® reported a greater proportion of units sold for under \$200,000. The average MLS® sale price for condominiums in the first quarter fell by five per cent to \$230,171.

Economy

Labour market conditions improving

Consistent with the trends identified in the second half of 2010, the local economy continued to improve in 2011 with employment levels rising

Figure 3

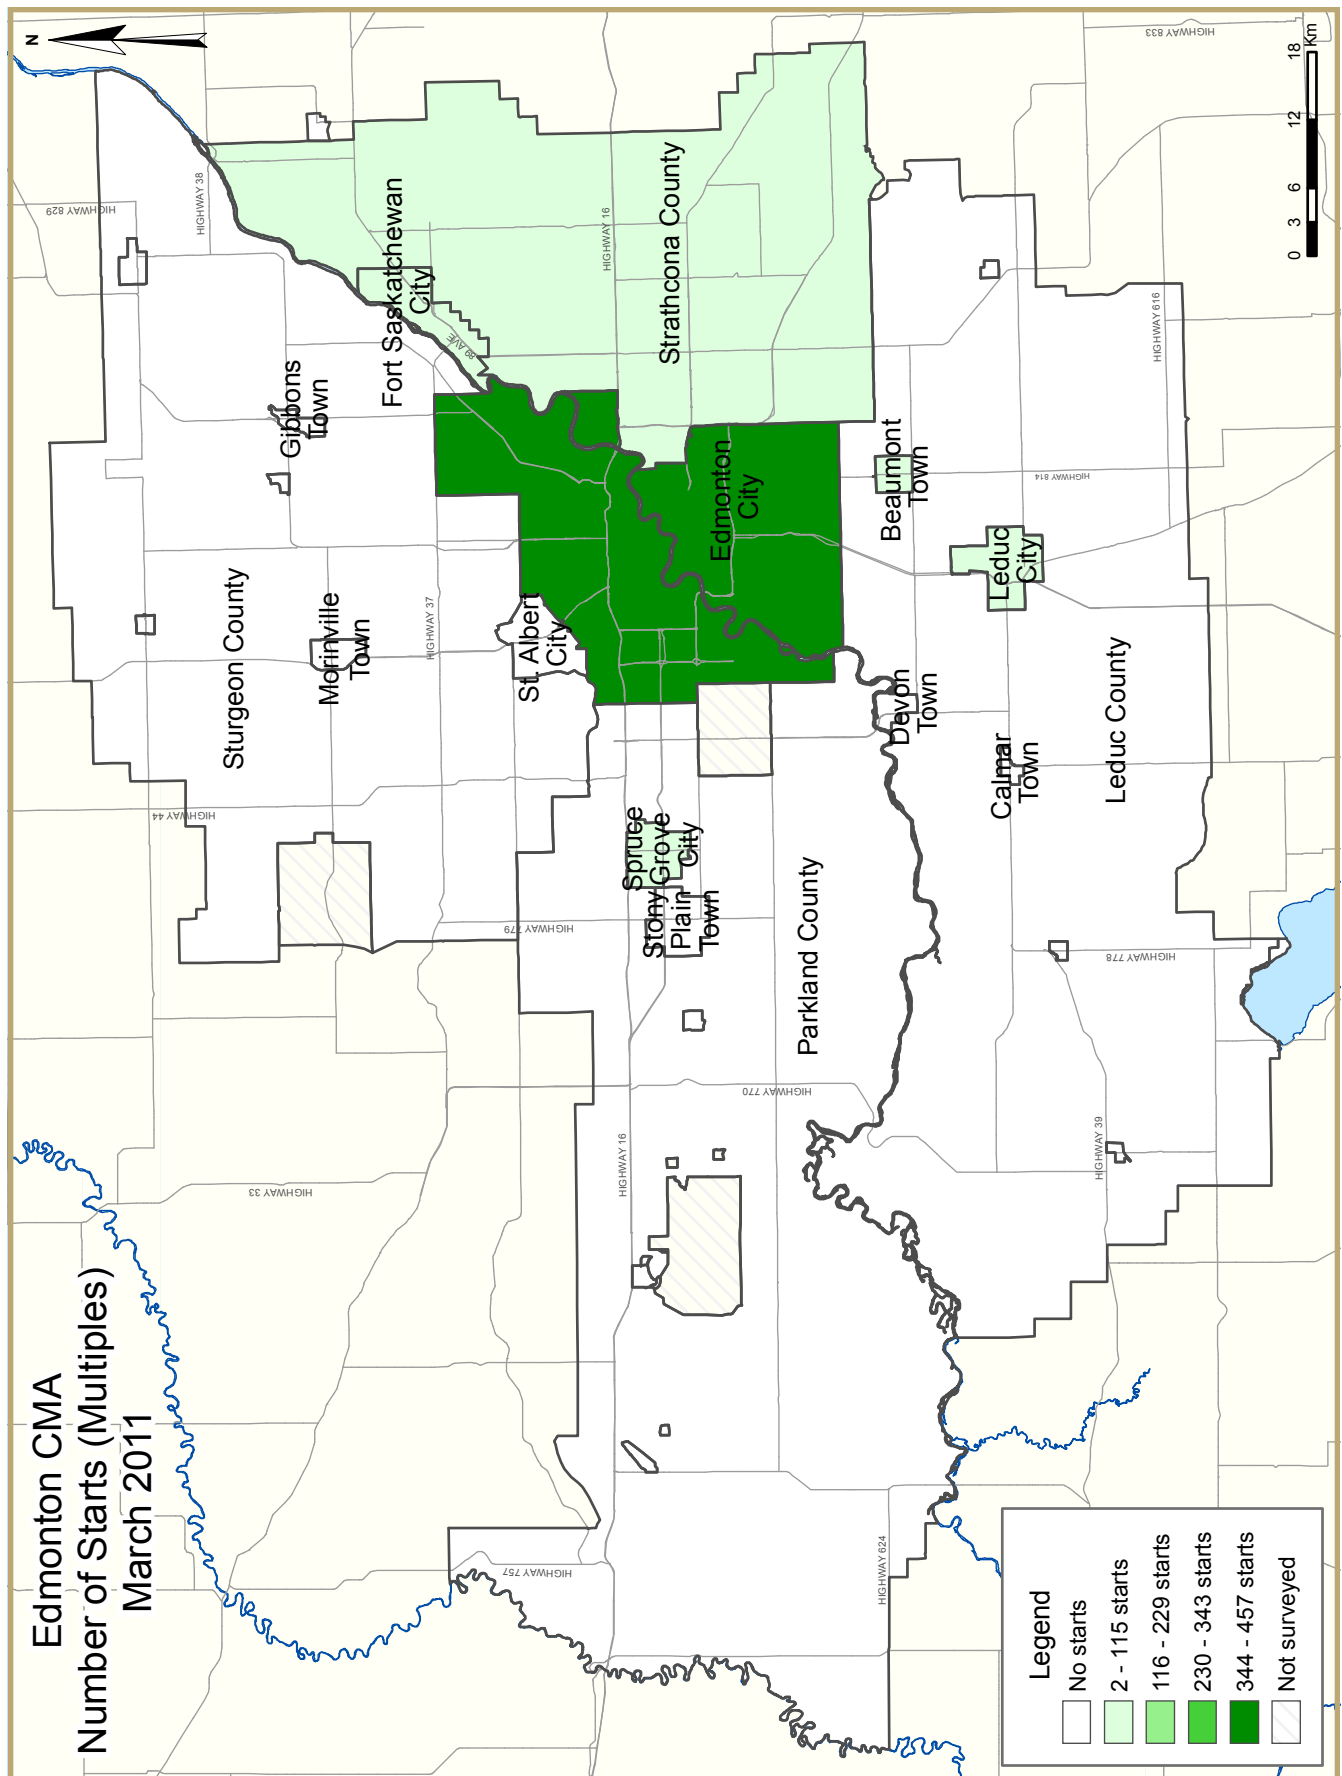

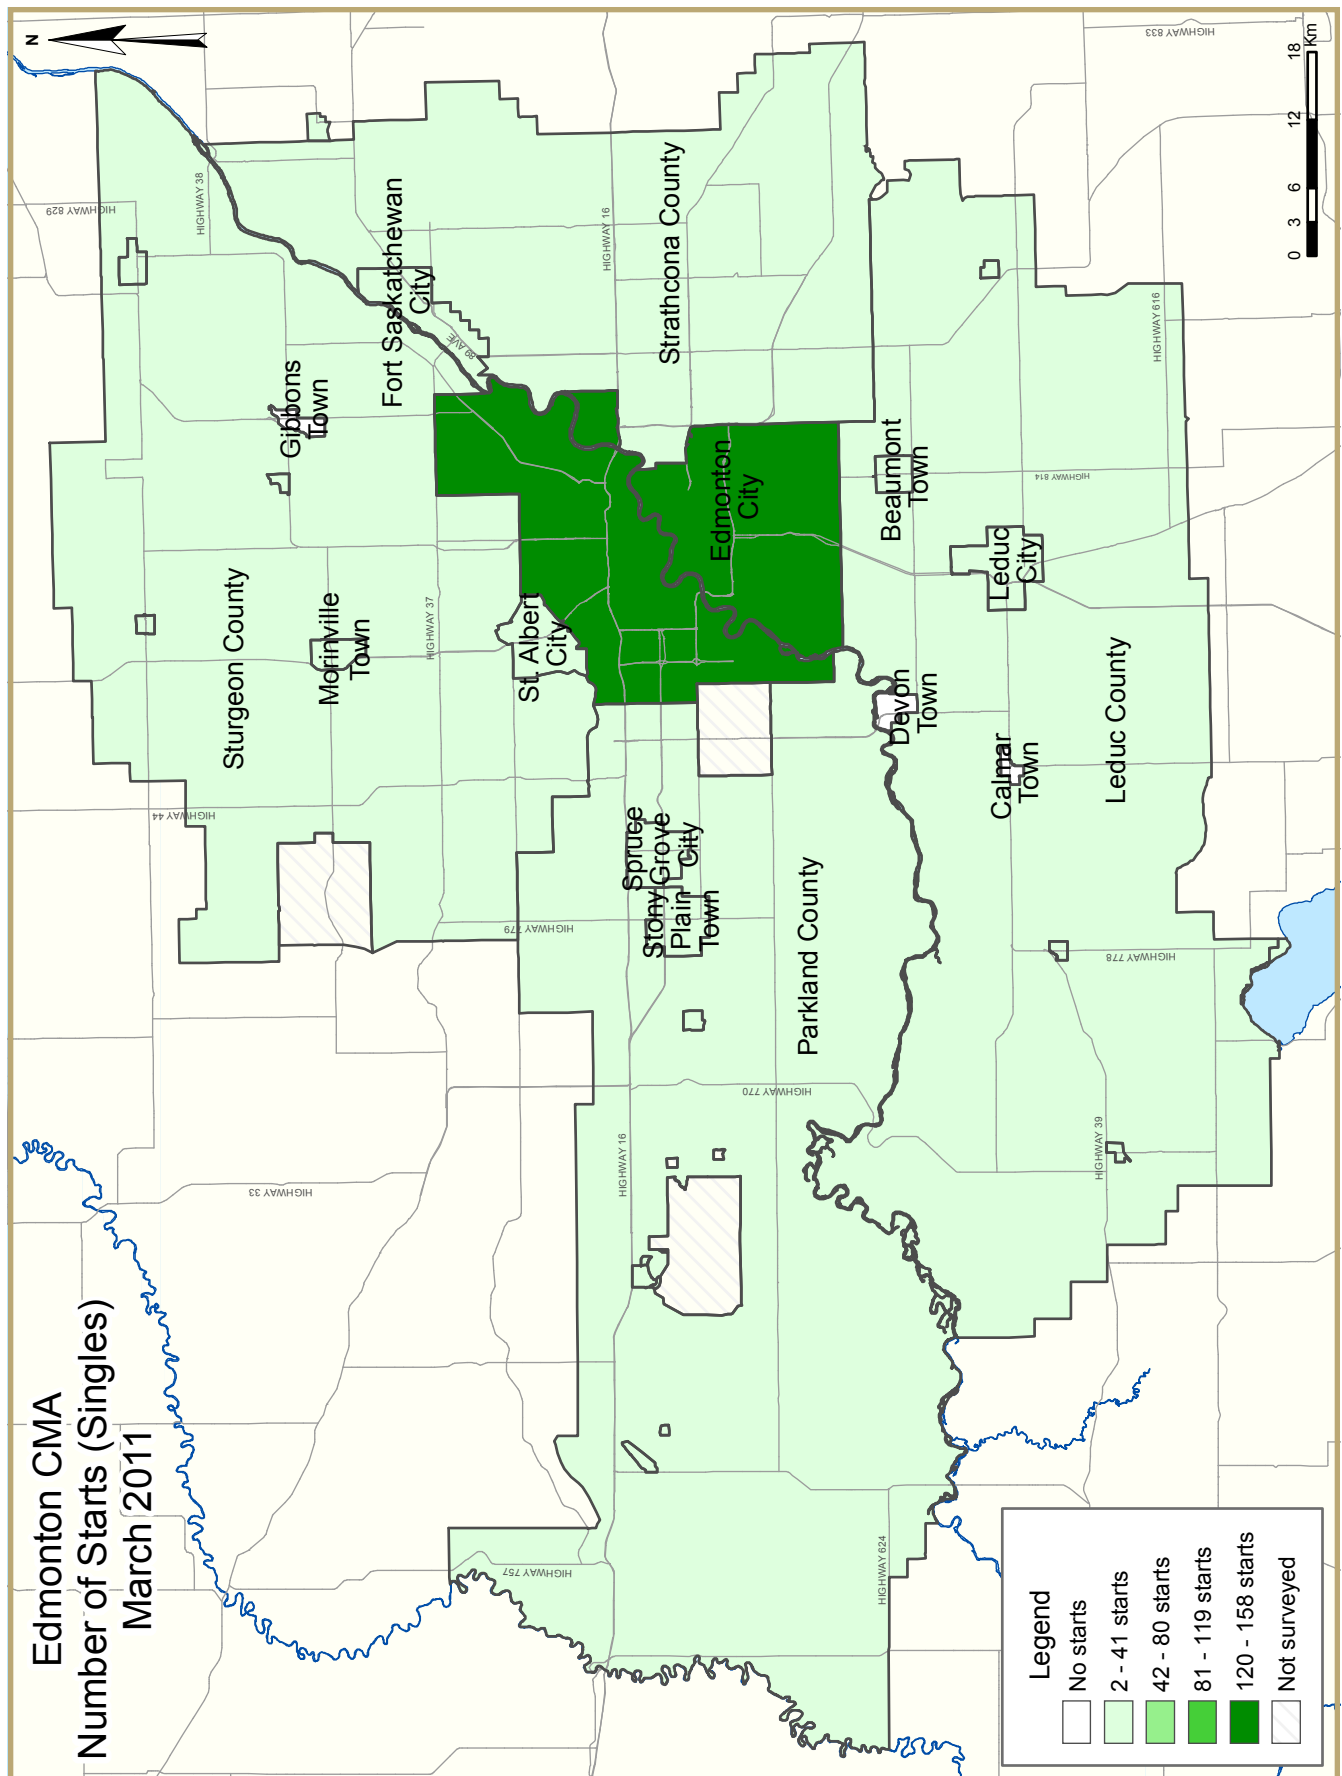

Source: CREA

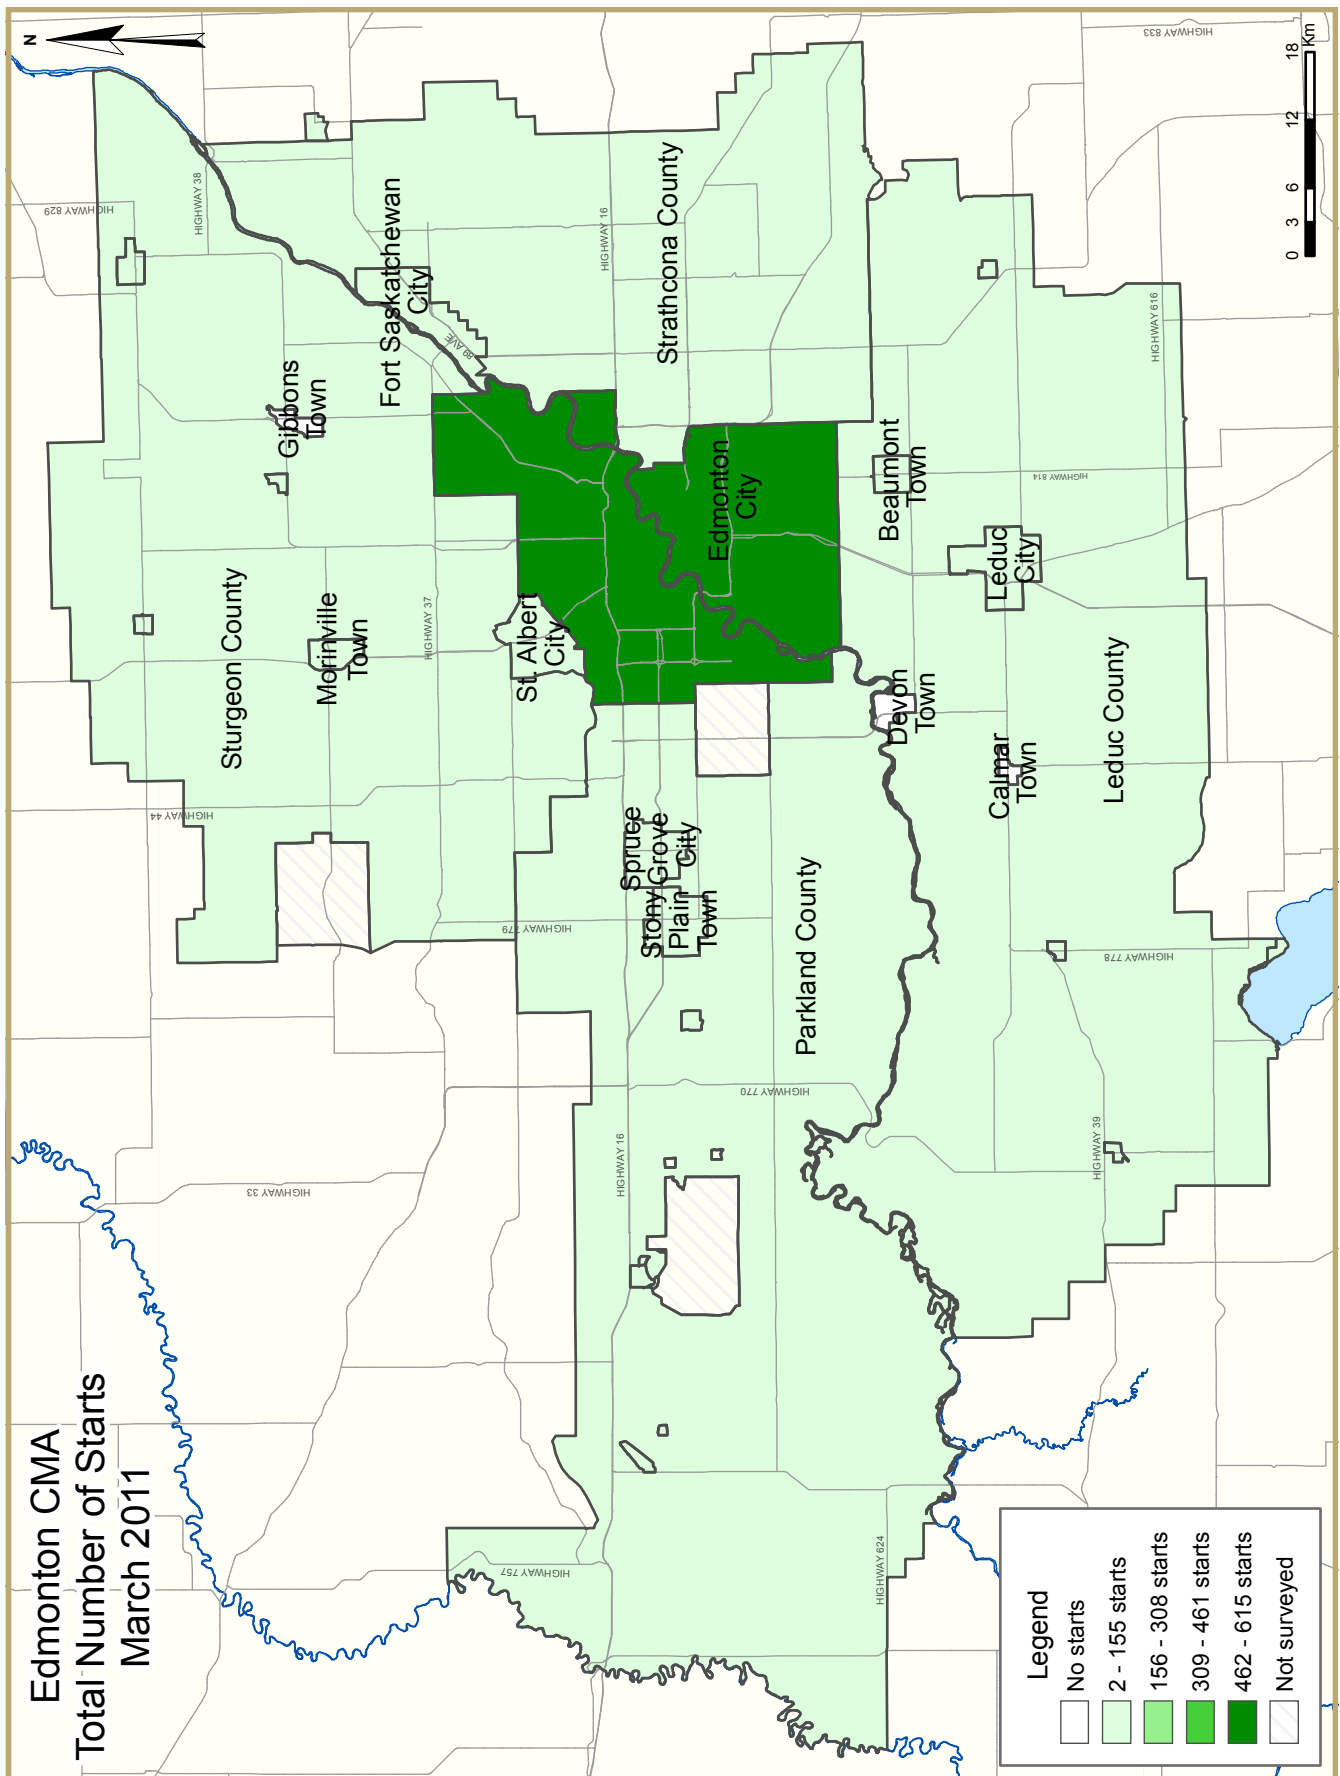

and the jobless count heading downward. The seasonally adjusted unemployment rate in March stood at 5.8 per cent, unchanged since December but down from 7.3 per cent in March 2010. Meanwhile, the number of people employed (seasonally adjusted) stood at 658,900 in March, up by 5.9 per cent from a year prior. The stronger demand for labour is starting to push wages upward. Statistics Canada's Average Weekly Earnings for Edmonton rose by 2.8 per cent on average in the first quarter, compared with a modest 0.5 per cent average rise in the first three months of 2010.

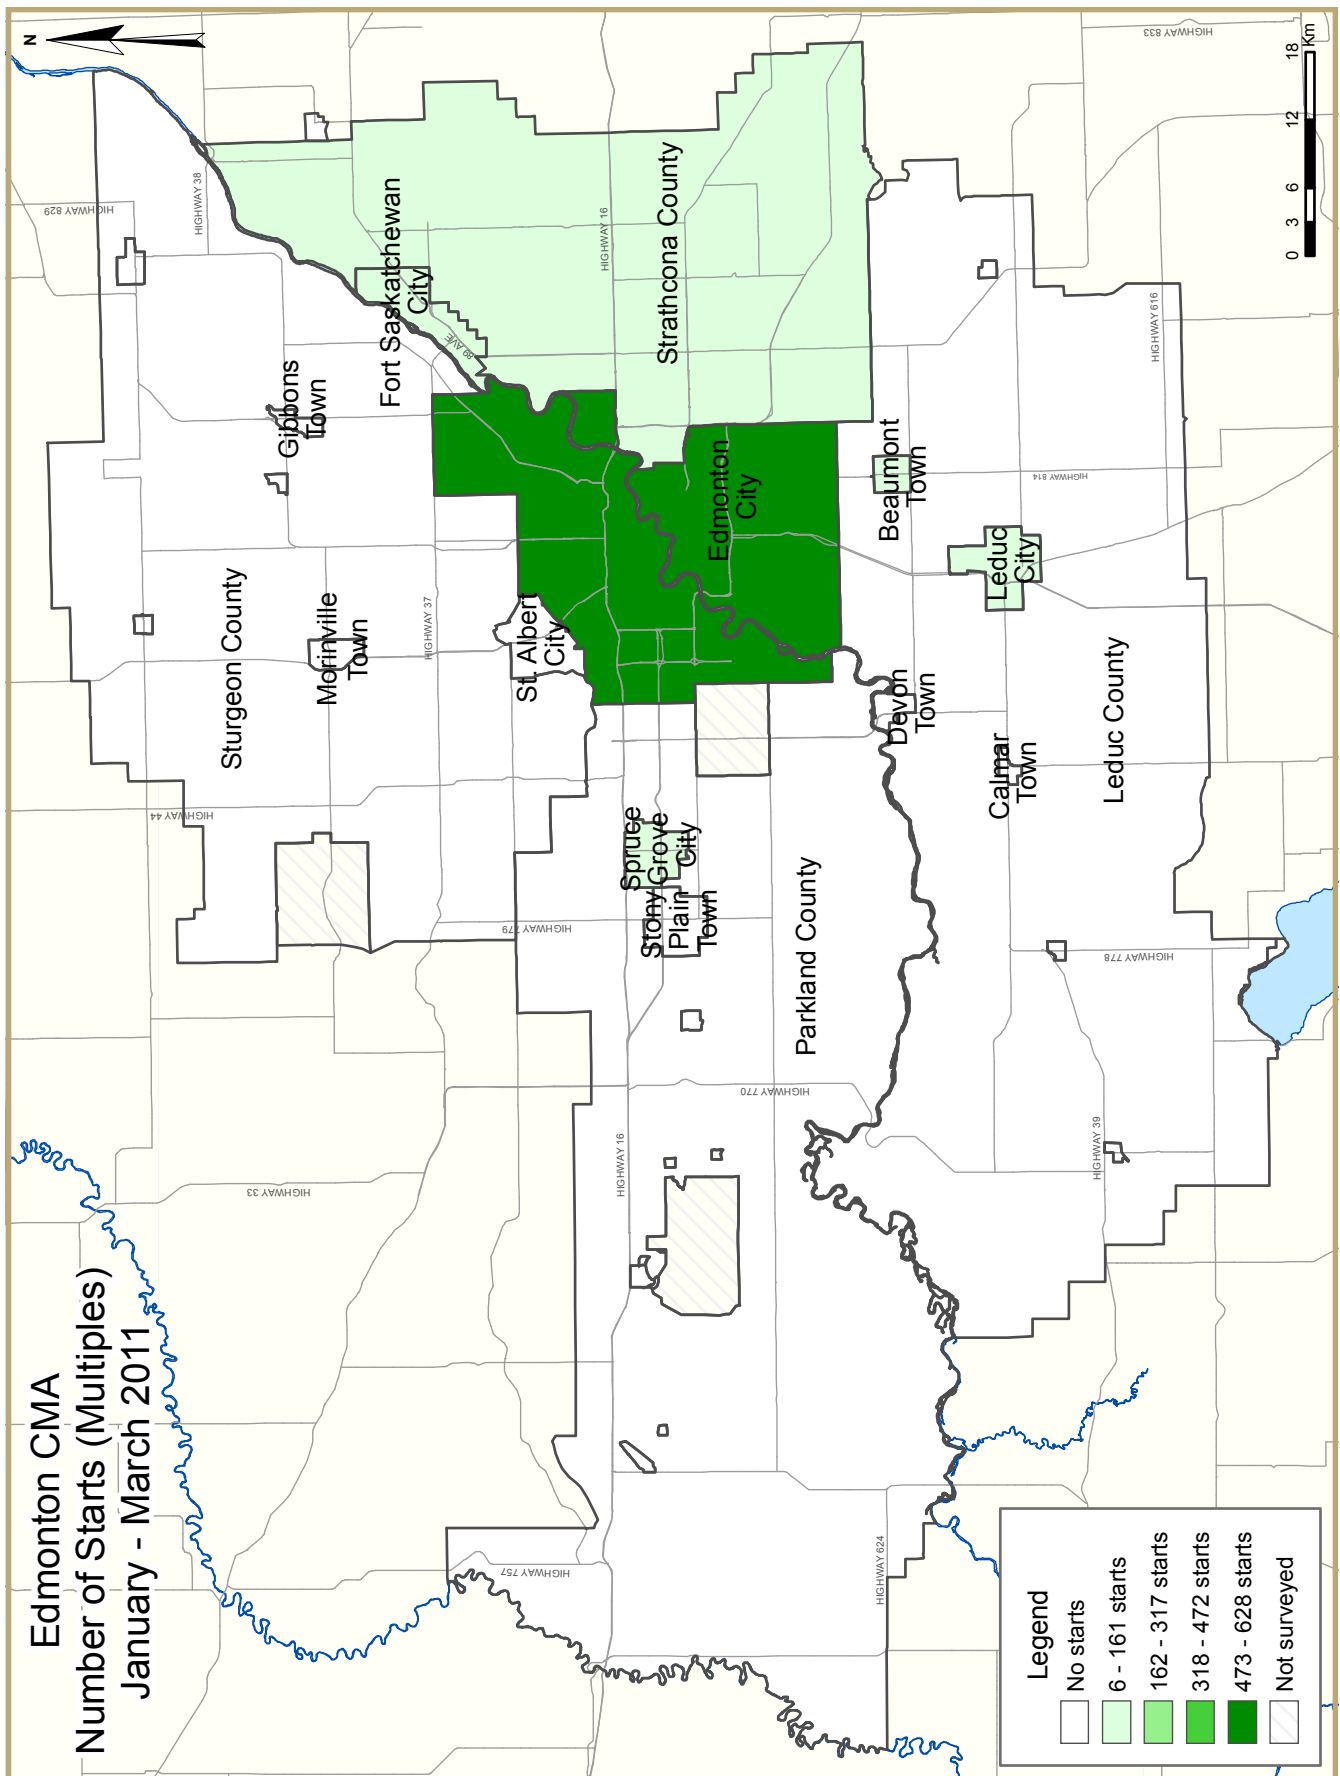

Statistics Canada estimates for the fourth quarter of 2010 indicate that Alberta witnessed a total of 2,510 interprovincial net migrants during the final three months. This compares with a net influx of 1,155 persons in the

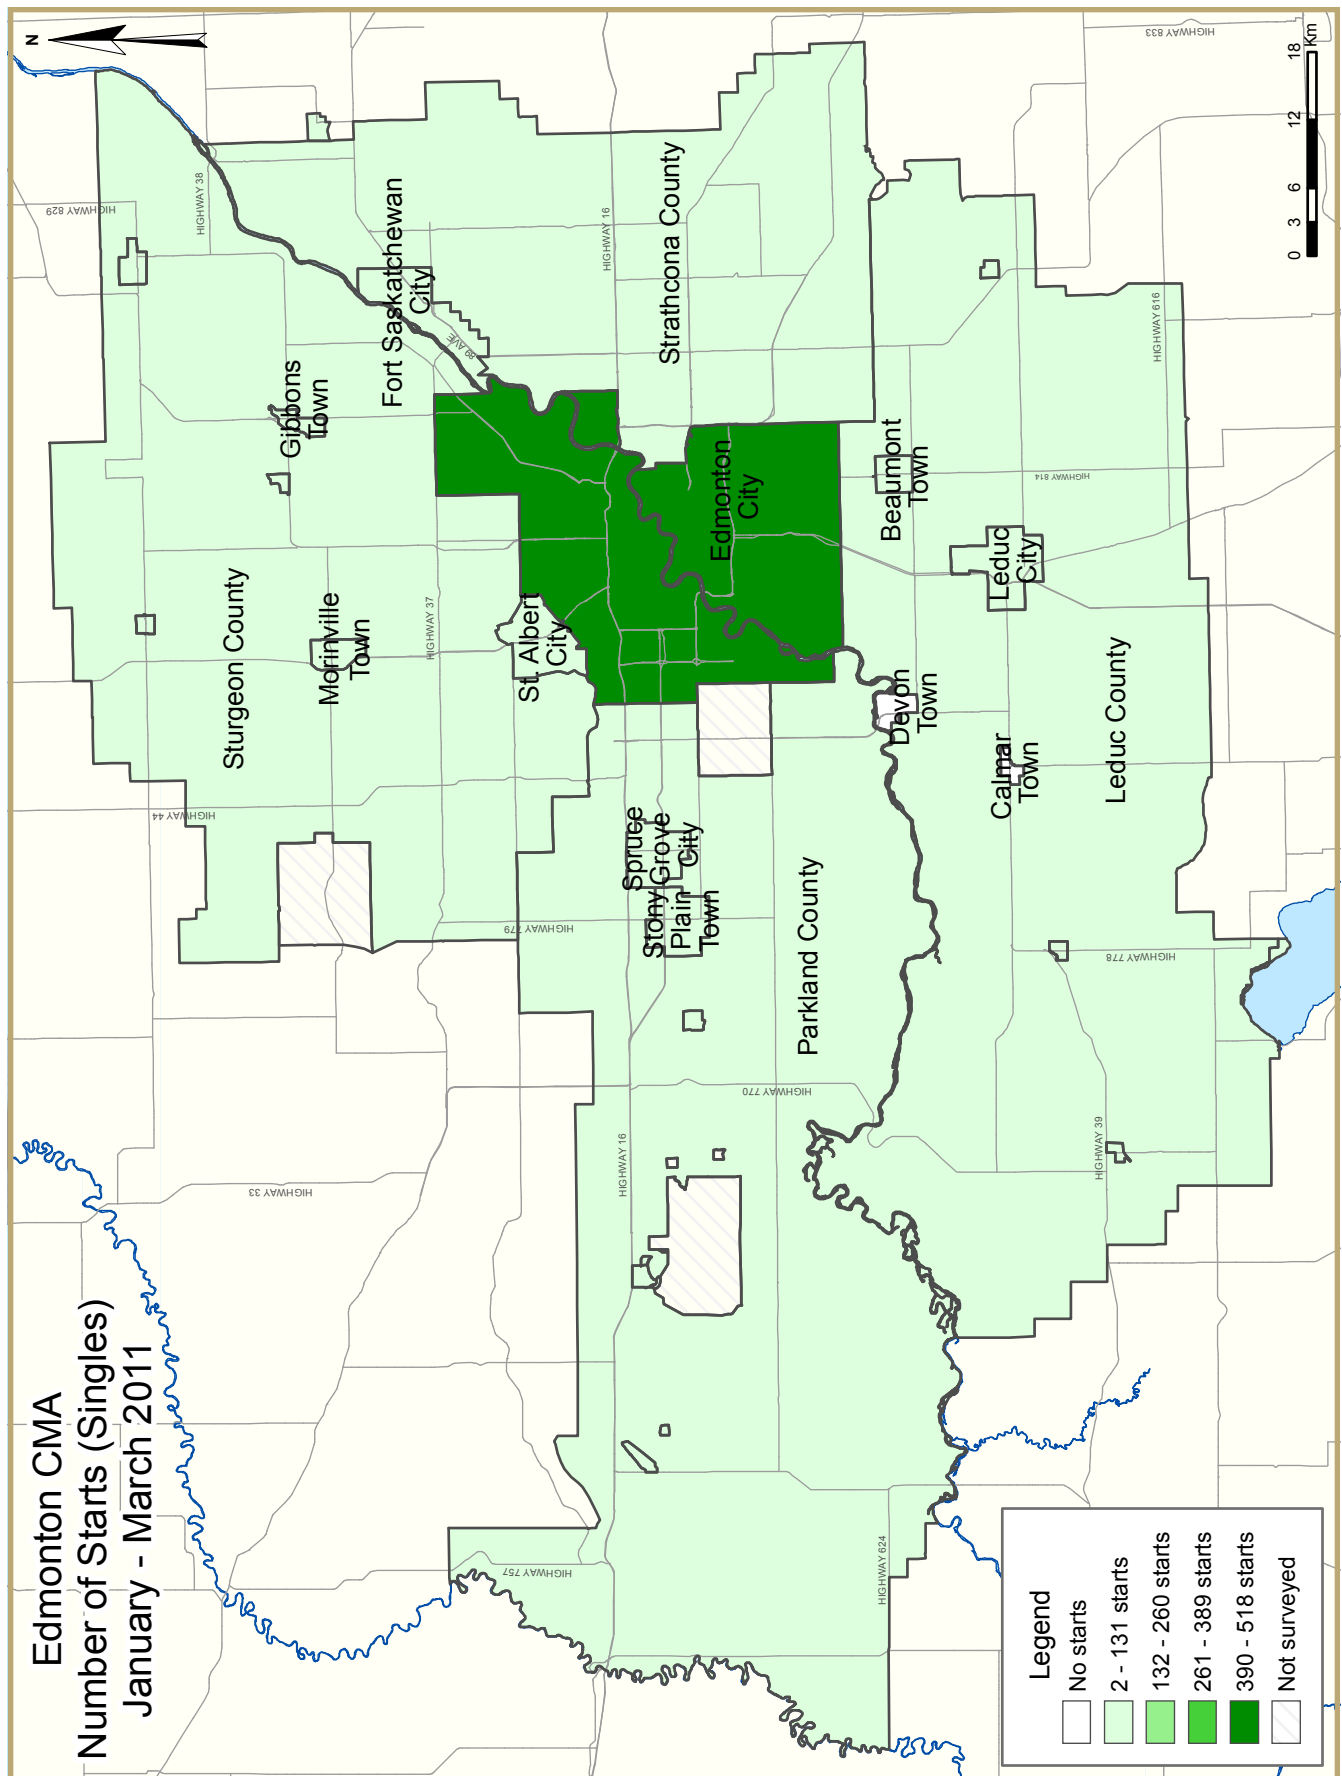

previous (third) quarter and a net loss of 2,780 persons in the fourth quarter of 2009. The province also experienced higher net international migration in the fourth quarter of 2010, compared with the same period in 2009. However, these increases were offset by a larger net outflow of non-permanent residents, most of which were temporary foreign workers. As such, the total net migration including non-permanent residents in the fourth quarter, at 418 persons, was down from the previous three month period (+5,873) but higher than the -578 reported in the final quarter of 2009.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
