HOUSING MARKET INFORMATION

HOUSING NOW Sherbrooke CMA

Date Released: Second Quarter 2011

SHERBROOKE CMA HOUSING STARTS IN THE FIRST QUARTER OF 2011

According to the latest results released by Canada Mortgage and Housing Corporation (CMHC), housing starts remained stable in the first quarter of 2011 in the

Sherbrooke census metropolitan area (CMA). In all, foundations were laid for 333 dwellings during this period, compared to 334 in the first quarter of 2010.

The stability in residential construction conceals different realities however: while singledetached housing starts decreased by 24 per cent, multi-unit (semi-detached, row and apartment) housing starts

climbed by 8 per cent. The increase in the multi-unit housing segment was entirely due to the rise in semi-detached and row home starts, which climbed from 44 units in the first quarter of 2010 to 140 units a year later. Like last year, housing demand in the Sherbrooke CMA continued to shift toward more affordable dwelling types, such as semi-detached and row homes.

Contrary to semi-detached and row home construction, apartment starts enumerated from January to March 2011 fell by 38 per cent (126 units in 2011, versus 202 in 2010). An analysis of the data by market segment revealed that the decrease impacted both the condominium and rental apartment segments.

After one quarter of activity, housing starts were up only in the metropolitan areas of Saguenay (over 100 per cent) and Gatineau (+15 per cent). In all other areas with 100,000 or more inhabitants, except for Sherbrooke where construction remained stable, decreases were registered, the strongest having been recorded in Trois-Rivières (-76 per cent), followed by Montréal (-11 per cent) and Québec (-1 per cent).

Housing starts decrease in Magog

Among all the sectors of the CMA, only the city of Magog posted a decrease in housing starts in the first quarter (24 units in 2011, versus 42 units in 2010). Quite the opposite occurred in the outlying area of the CMA, as 21 dwellings got under way, compared to 8 a year before. This increase can be largely attributed to the popularity of single-detached homes in that sector.

As was the case in the CMA as a whole, housing starts remained relatively stable in the city of Sherbrooke in the first quarter (288 units in 2011, compared to 284 units in 2010). Semi-detached and row homes were without a doubt the most popular housing types, as 136 units were started in 2011, more than triple the level reached in 2010. The data by borough for the city of Sherbrooke also showed that only Rock-Forest-Saint-Élie-Deauville recorded a significant decrease in the number of units built from January to March 2011.

MLS® sales down in the first quarter of 2011

According to data from the Quebec Federation of Real Estate Boards (QFREB), MLS® sales decreased by 10 per cent year over year in the first quarter of 2011, to 506 units. Declines had also been registered in the previous three quarters. These successive drops were mainly due to the fact that many people, anticipating

Figure 2

an increase in mortgage rates, had moved up their purchases into early 2010. The volume of properties that changed hands in the first quarter of 2010 was one of the highest ever recorded since these data began being compiled, in 2002. It was therefore not surprising to see a drop in sales at the beginning of 2011 in the Sherbrooke area.

This drop did not extend to all market types, however. In fact, MLS® condominium sales remained stable in the first quarter of 2011 (70 sales). In the single-family housing segment, 392 homes were sold, down 9 per cent from a year earlier. The same situation was observed in the plex segment, where sales decreased from 54 to 43 units in the space of one year.

From a geographical standpoint, the cities of Sherbrooke and Magog both posted decreases in MLS® sales (-14 per cent and -3 per cent, respectively). Only the outlying area of the CMA, with a gain of 26 per cent, bucked this trend.

Average MLS® price increases

The overall average MLS® price (for single-family houses, condominiums and plexes) climbed from \$185,366 in the first quarter of 2010 to \$208,337 in the first quarter of 2011, for an increase of 12 per cent. The average prices rose for all housing types, with the highest increase having been recorded for single-family homes (+13 per cent), followed by condominiums and plexes (+9 per cent).

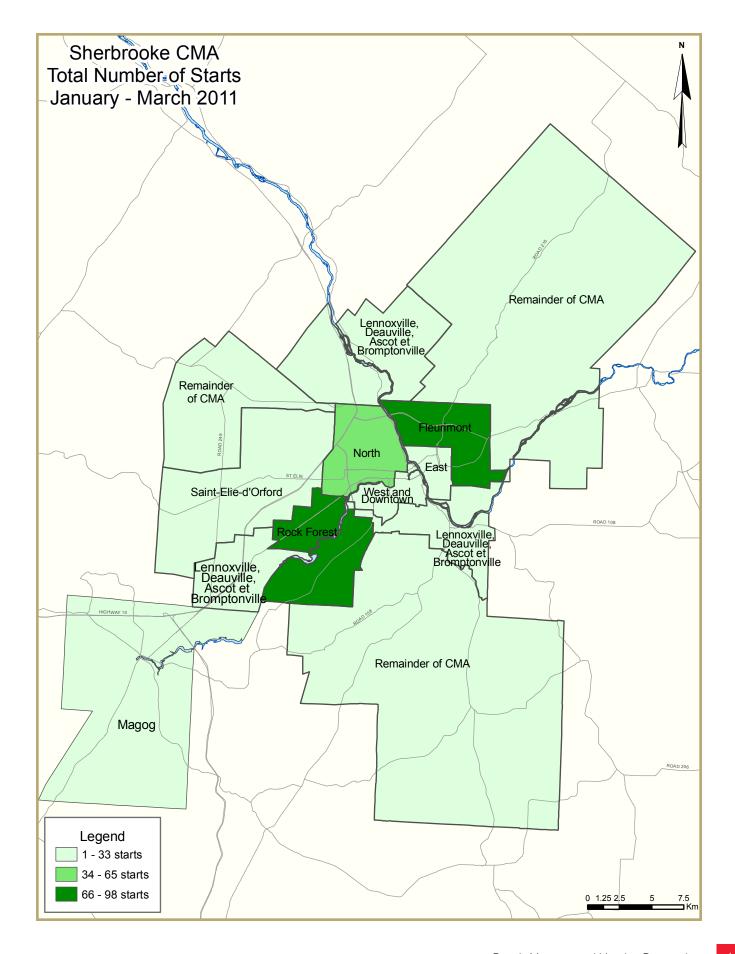

Employment

In the first months of 2011, employment¹ increased by 7 per cent in the Sherbrooke CMA. It should be recalled, however, that employment had dropped during the same period in 2010. According to the seasonally

adjusted data, the pace of job creation in the area has been increasing every month since then. Contrary to last year, the Sherbrooke labour market should therefore grow this year, which will contribute to the strength of the housing market.

In 2011, Statistics Canada made methodological changes to the Labour Force Survey (LFS). In fact, until December 2010, labour force estimates were calculated using the population data from the 2001 Census. Since January 2011, these estimates have been adjusted based on the population data from the 2006 Census. Also, the CMAs are now based on the 2006 Census geographical boundaries, rather than on the boundaries from the 2001 Census. In the case of the Sherbrooke CMA, the LFS data for the city of Magog are now included in those of the CMA. Historical data (up to 1996) were also adjusted to take these changes into account.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
