How to obtain more information

For information about this product or the wide range of services and data available from Statistics Canada, visit our website at www.statcan.gc.ca, e-mail us at infostats@statcan.gc.ca, or telephone us, Monday to Friday from 8:30 a.m. to 4:30 p.m., at the following numbers:

Statistics Canada's National Contact Centre

Toll-free telephone (Canada and the United States):

Inquiries line	1-800-263-1136
National telecommunications device for the hearing impaired	1-800-363-7629
Fax line	1-877-287-4369

Local or international calls:

Inquiries line	1-613-951-8116
Fax line	1-613-951-0581

Depository Services Program

Inquiries line	1-800-635-7943
Fax line	1-800-565-7757

To access this product

This product, Catalogue no. 16-201-S, is available free in electronic format. To obtain a single issue, visit our website at www.statcan.gc.ca and browse by "Key resource" > "Publications."

Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner. To this end, Statistics Canada has developed *standards of service* that its employees observe. To obtain a copy of these service standards, please contact Statistics Canada toll-free at 1-800-263-1136. The service standards are also published on www.statcan.gc.ca under "About us" > "The agency" > "Providing services to Canadians."

Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

User information

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published
- * significantly different from reference category ($p < 0.05$)

3.10	Fertilized area by province	47
3.11	Manure production by major drainage area and sub-drainage area, 2006	48
3.12	Area of farmland treated with herbicides by province, selected years	49
3.13	Area of farmland treated with insecticides by province, selected years	50
3.14	Top ten substances released to land, 2009	50
3.15	Water yield per capita by drainage region, 1976 and 2006	51
3.16	Water use in Canada, by sector, 2005	52
3.17	Population served by drinking water plants, by source water type and province and territory	53
3.18	Population served by drinking water plants, by source water type and drainage region	54
3.19	Raw water volumes processed by drinking water plants, by source water type and province and territory	55
3.20	Raw water volumes processed by drinking water plants, by source water type and drainage region	56
3.21	Top ten substances released to water, 2009	57
3.22	General status of species in Canada, as reported by the National General Status Working Group	58
3.23	Wildlife species extinct and at risk in Canada, as reported by the Committee on the Status of Endangered Wildlife in Canada, 2010	60
3.24	Legal protection of wildlife species in Canada under the <i>Species at Risk Act</i>	61
3.25	Wildlife species extinct and extirpated from Canada, 2010	62
3.26	Harvest estimates for selected waterfowl species	63
3.27	Pelts harvested by province and territory, 2008	64
3.28	Value of pelts harvested by province and territory, 2008	65
4.1	Terrestrial and marine protected areas by province and territory, 2011	67

Table of contents – continued

5.1	Gross domestic product of agriculture and food industries	70
5.2	Employment in the agriculture industries	70
5.3	Number of farms by province	71
5.4	Number of farms, farm area and land in crops	72
5.5	Selected field crop production	73
5.6	Production of major small grains	75
5.7	Selected livestock populations	77
5.8	Gross domestic product of fishing industries	78
5.9	Employment in the fishing industries	79
5.10	Exports and imports of fish and fish products	80
5.11	Landed catch and value	81
5.12	Aquaculture, production and value	81
5.13	Volume of roundwood harvested by forest product category, selected years	82
5.14	Volume of roundwood harvested by province and territory	83
5.15	Gross domestic product of forestry and forest products industries	84
5.16	Employment in forest products industries by province and territory	85
5.17	Export of forest products	86
5.18	Gross domestic product of mining and oil and gas extraction industries	86
5.19	Employment in mining and oil and gas extraction industries by province and territory	87
5.20	Gross domestic product of petroleum and coal products and primary metal manufacturing	88
5.21	Production of selected minerals and fuels by province and territory, 2009 ^p	89
5.22	Reserves of selected major metals	90
5.23	Annual production of metals and non-fuel minerals	91
5.24	Primary energy consumption indicators	92
5.25	Production and availability of primary energy resources	93
5.26	Primary energy production, exports and imports	94
5.27	Established energy resource reserves	95
5.28	Installed generating capacity and generation of electric energy by province and territory, 2006	96
5.29	Hydro-electric power generation by province and territory	97
5.30	Energy consumed in thermal-electric power stations by fuel type	98
5.31	Net energy generation in thermal-electric power stations by fuel type	99
5.32	Efficiency of thermal-electric power stations by fuel type	100
6.1	Total population by province and territory, selected census years	102
6.2	Components of population growth	103

Table of contents – continued

6.3	Population by ecozone	104
6.4	Population by provincial and territorial ecozone	105
7.1	Use of energy-saving lights, Canada and provinces, 2009	108
7.2	Thermostat use by households during the winter, Canada and provinces, 2009	108
7.3	Primary type of drinking water consumed, Canada and provinces, 2009	109
7.4	Treatment of drinking water, Canada and provinces, 2009	110
8.1	Gross domestic product by industry	112
8.2	Employment by industry	113
8.3	Exports and imports	114
9.1	Water transport	117
9.2	Rail transport	118
9.3	Long distance truck transport, for-hire carriers	119
9.4	Truck transport, for-hire carriers	119
9.5	Air transport	120
9.6	Motor vehicle registrations	120
9.7	Usual mode of transportation for travel to work	121
9.8	Usual mode of transportation for travel to work, by census metropolitan areas (CMA), 2006	121
9.9	Consumption of refined petroleum products by transportation industry	122
9.10	Fuel consumption and number of vehicles by passenger bus and urban transit industries, 2008 ^P	122
10.1	Operating expenditures on environmental protection by type of activity and industry	124
10.2	Capital expenditures on environmental protection by type of activity and industry	125
10.3	Distribution of capital expenditures on pollution prevention by medium and industry, 2008	126
10.4	Distribution of capital expenditures on pollution abatement and control (end-of-pipe) by medium and industry, 2008	126
11.1	Disposal and diversion of waste, by province and territory	128
11.2	Disposal of waste, by source and by province and territory	128
11.3	Materials prepared for recycling by type and by province and territory, 2008	129

Table of contents – continued

12.1	Estimates of research and development expenditures in the higher education sector, 2008/2009	131
12.2	Federal government research and development expenditures by socio-economic objective	132
13.1	<i>Canadian Environmental Protection Act</i> enforcement activities	134

Overview

Human Activity and the Environment: Detailed statistics is a collection of statistics focusing on human activities from an environmental perspective. The report is divided into 13 themes or sections, and includes 105 data tables and 8 maps. Accompanying text serves to place the information in context and guide the reader through the detailed holdings. Data are compiled from many sources including Statistics Canada, Agriculture and Agri-Food Canada, Environment Canada, Fisheries and Oceans Canada, Natural Resources Canada, Transport Canada, Canadian Council of Forest Ministers and Canadian Council on Ecological Areas.

Section 1

Physical geography

This section provides descriptive information on Canada's physical environment.

1.1 Terrestrial ecozones

"An ecosystem is a system in which the interaction between different organisms and their environment generates a cyclic interchange of materials and energy."¹ Ecosystems can also be defined as biological communities that are hierarchical, integrated, dynamic and self-sustaining. In recognition of the need to assess Canadian ecosystems, *A National Ecological Framework for Canada*² was developed. This classification framework is hierarchical and delineates, classifies and describes ecologically distinct areas of Canada's surface at different levels of detail. The ecological framework was developed by identifying distinct areas of non-living (abiotic) and living (biotic) factors that are ecologically related. From the broadest to the smallest, the hierarchical classification consists of seven levels of generalization: ecozones, ecoprovinces, ecoregions, ecodistricts, ecosections, ecosites and ecoelements. Map 1.1 illustrates the delineation of the country's 15 terrestrial ecozones.

1.2 Land cover

Land cover information describes the surface characteristics of the land, such as vegetation type, perennial ice and snow cover and water and wetland

distribution. Canada's land and water area totals nearly 10 million km². Table 1.1 and Map 1.2 show the distribution of broad land cover types across Canada.

1.3 Hydrology

Drainage areas, or watersheds, are natural hydrological units that bound the movement of surface water as part of the Earth's hydrological cycle. These units gather precipitation, which is either absorbed within the area or is discharged at the outlet of the drainage area. Because drainage areas are contained systems, they are useful for monitoring water flow and quality. Delineating drainage areas is important in order to maintain secure supplies of clean water, identify sources of pollution and protect communities from flooding.

Statistics Canada's drainage area geography³ is divided into five ocean drainage areas: the Pacific Ocean, the Arctic Ocean, the Atlantic Ocean, Hudson Bay, and the Gulf of Mexico. These drainage areas are further subdivided into 25 drainage regions (Map 1.3).

Most of Canada's surface freshwater flows northward. An estimated 12% of Canada, or 1.2 million km², is covered by lakes and rivers (Table 1.2).

The supply of freshwater, or Canada's renewable freshwater resources, is represented by water yield. Water yield is the amount of freshwater derived from unregulated flow measurements for a given geographic area over a defined period of time and is an estimate of the renewable water. Table 1.3 shows the average annual water yield by drainage region for 1971 to 2004 while Table 1.4 shows yearly yield data for 13 drainage regions. Table 1.5 contains median monthly water yield for selected drainage regions. Variation in water yield amongst the 25 drainage regions in Canada is illustrated as a volume per unit area in Map 1.4 and as a depth in Map 1.5. The largest yields of renewable fresh water are on the two coasts.

1. The water yield estimates are 34-year annual averages (1971 to 2004), with the exception of those estimates for drainage regions 5, 7, 16, 17, 18 and the Labrador portion of 25 which are based on 20 years of data (1975 to 1996); and drainage region 8 which is based on a 23-year annual average (1972-1994) for the Arctic Archipelago (Spence and Burke 2008), and on a 20-year annual average (1975 to 1996) for the remaining area.

Note(s): Data were derived from discharge values contained in Environment Canada, 2010, Water Survey of Canada, *Archived Hydrometric Data (HYDAT)* (www.wsc.ec.gc.ca/hydat/H2O/index_e.cfm?cname=main_e.cfm).

Section 2

Climate

Climate can be defined as the average weather that occurs in a specific area over a period of time. Climate is measured using various weather elements as indicators. Two essential indicators, temperature and precipitation, are measured systematically at weather stations over time, accumulating observations from which climatic summaries can be derived. Table 2.1 lists some of the more extreme weather events that have recently had an impact on Canada.

2.1 Temperature

Table 2.2 summarizes the mean daily temperatures by month as recorded at selected weather stations across

Canada and averaged over the period of 1971 to 2000. Table 2.3 presents temperature trends and departures for the climate regions shown in Map 2.1.

2.2 Precipitation

Some 5,000 km³ of precipitation falls on Canada every year, mainly in the form of rain and snow.¹ Air masses that carry this precipitation generally circulate from west to east (Map 2.2). Table 2.4 shows the average annual precipitation as recorded at selected weather stations.

1. A linear (least square) trend over the period between 1948 and 2010.

2. Difference from the normal temperature.

3. This column ranks 2010 temperature departures over the period between 1948 and 2010. For example, the Atlantic Canada Climate Region had a departure that was 2.1°C warmer than the long term temperature average, which ranked the 2010 season as the warmest over the 63 year period.

4. The climate regions of Canada are illustrated in Map 2.1.

Section 3

Ecosystems

This section focuses on the impacts human activities have on air, land, water and wildlife.

3.1 Air

The atmosphere, an envelope of gases surrounding the Earth, is made up of nitrogen (78%), oxygen (21%), argon (0.9%) and other gases. The atmosphere provides the air we breathe, shields us from ultraviolet radiation, affects air circulation and weather patterns and ultimately keeps the Earth warm.

Traffic emissions affect urban air quality; industrial emissions of sulphur oxides and nitrogen oxides can lead to acid rain; chlorofluorocarbons, hydrochlorofluorocarbons and other substances deplete the ozone layer; and carbon dioxide, methane and nitrous oxide contribute to climate change. Air pollutants have a negative impact on the air we breathe and also have an effect on soil and water systems through acid deposition and other means. Effects can be local or global, as pollution travels with prevailing winds. One way of measuring air pollution is through criteria air contaminants, or those for which ambient air quality standards have been established by government.

The National Pollutant Release Inventory (NPRI) Database measures the volume of pollutants released on-site by over 8,000 industrial facilities. Table 3.1 presents the top ten substances released to air. Table 3.2 breaks down criteria air contaminant emissions by source.

Greenhouse gases (GHGs) help regulate the planet's climate by trapping solar energy as it radiates back from the Earth. Emissions of GHGs from human activities over the past 200 years have amplified this natural process and could impact global climate conditions. While criteria air contaminants persist in the environment for a relatively short time (from less than a day to a few weeks), the effects of GHGs may not be realized for much longer periods of time. Table

3.3 compares emissions of common GHGs: carbon dioxide, methane and nitrous oxide, by source

Table 3.4 shows direct energy use and greenhouse gas emissions, by sector. Table group 3.5 shows energy intensity, measured as gigajoules per thousand dollars of production, and GHG intensity measured as tonnes of carbon dioxide equivalent per thousand dollars of production, for 117 industries in Canada. In Table group 3.6 energy intensity and GHG intensity are indexed to 1990 and data are presented for the same 117 industries.

3.2 Land

Canada is the second largest country in the world, with almost 10 million km² of land and water. This land supports many uses, from agriculture and forestry to space for settlements, parks and recreation.

Table 3.7 shows the distribution of forest land by province and territory. Table 3.8 presents the area of forest harvested, while Table 3.9 shows the area of timber-productive forest land burned.

Natural nutrients on agricultural land are often supplemented by fertilizers and animal manures that supply additional nitrogen, phosphorus and potassium and other nutrients that are essential for plant growth. The application of manure also adds needed organic matter to soil. Care must be taken to ensure that fertilizers and manure are applied correctly, in a way that minimizes the risk of runoff. Table 3.10 shows fertilized area while Table 3.11 shows manure production.

Pesticides, including herbicides, insecticides and fungicides are used to control weeds, insects and crop diseases. The risk to the environment is determined by the mobility, persistence and toxicity of the pesticide to organisms other than its target. The area of farmland treated with herbicides and insecticides is illustrated in Tables 3.12 and 3.13.

The top ten substances released to land according to the NPRI are presented in Table 3.14.

3.3 Water

Canada has one of the largest renewable water supplies in the world. Water is used for power generation, transportation, recreation, irrigation, manufacturing, agriculture and drinking water. We also use our rivers, lakes and marine areas to dispose of municipal wastewater and wastes from industry. Some activities for which water is used can make it unfit for use by humans or wildlife.

Table 3.15 shows renewable freshwater yield per capita by drainage region while Map 3.1 illustrates the proportion of renewable fresh water that is used by Canadians within each of Canada's major drainage regions. Table 3.16 outlines water use by sector.

Drinking water plants treat water that is supplied to commercial, institutional, industrial and residential users. Tables 3.17 and 3.18 illustrate the population served by drinking water plants while Tables 3.19 and 3.20 illustrate the raw water volumes processed.

The top ten substances released to water according to the NPRI are shown in Table 3.21.

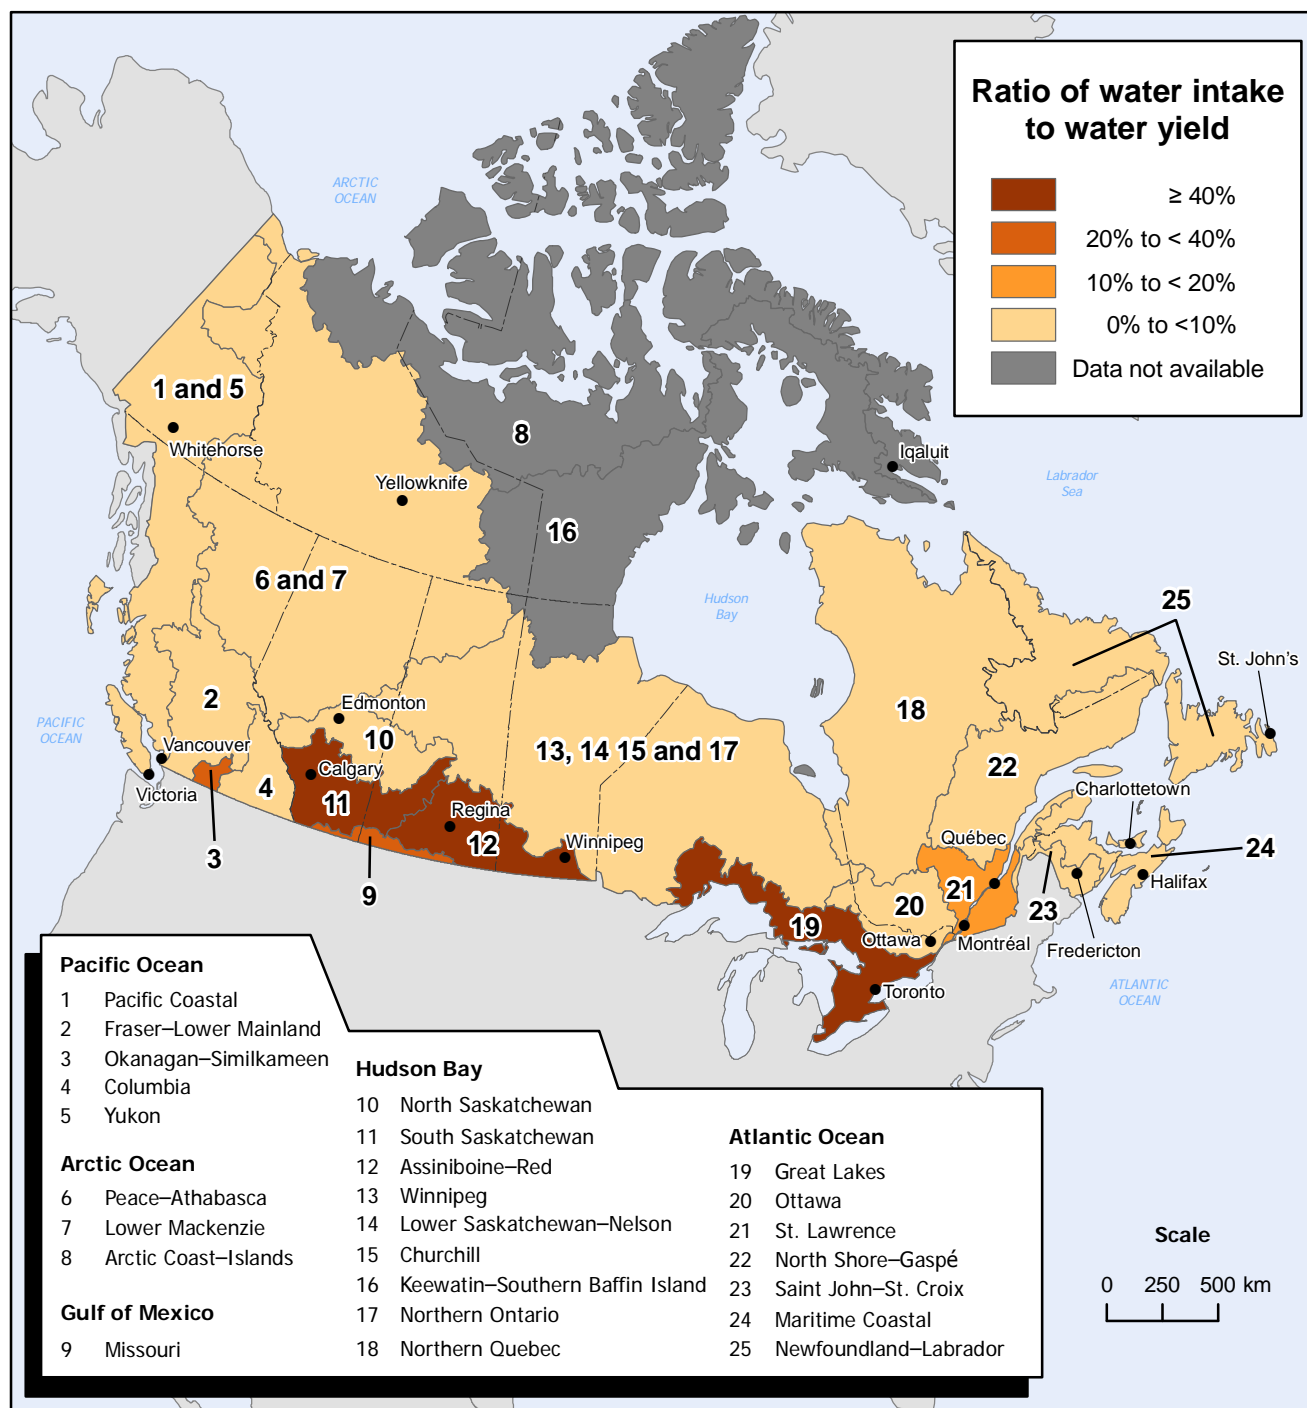

3.4 Wildlife

The general population status of Canada's wildlife species is outlined in Table 3.22. Table 3.23 outlines the number of wildlife species extinct and at risk in Canada. The legal protection of wildlife species in Canada under the *Species at Risk Act* is summarized in Table 3.24. Table 3.25 lists extinct and extirpated species in Canada, including date of extinction or extirpation and the probable cause(s).

Wildlife hunting and trapping are carried out widely in Canada. Table 3.26 shows harvest estimates for selected waterfowl species. Some high value, fur-bearing animal species are raised on farms for harvest. Tables 3.27 and 3.28 show the number and value of pelts harvested in the wild and raised on farms.

Map 3.1

Ratio of August 2005 water intake to the August median water yield for 1971 to 2004

Note(s): The following drainage regions were aggregated to protect confidentiality; Pacific Coastal (1) with the Yukon (5); Peace–Athabasca (6) with the Lower Mackenzie (7); and the Winnipeg (13), Lower Saskatchewan–Nelson (14), Churchill (15) and Northern Ontario (17). Data that contributed to intake volumes (demand) were compiled from Statistics Canada: Industrial Water Survey, 2005; Households and the Environment Survey, 2006; Survey of Drinking Water Plants, 2005 to 2007; and Agricultural Water Use Survey 2007. Data from Agriculture and Agri-Food Canada and Canada Mortgage and Housing Corporation were used to help allocate and derive some intake volumes. Water yield volumes (supply) used for each drainage region are a 34-year median (1971 to 2004) for the month of August.

Source(s): Canada Mortgage and Housing Corporation, 2007, *Household Guide to Water Efficiency*, Product number 61924. Statistics Canada, Environment Accounts and Statistics Division, 2010, special tabulation.

Table 3.1
Top ten substances released to air, 2009

	Releases		Share of total
	tonnes	percent	
Sulphur dioxide	1,308,230.2		37.2
Carbon monoxide	866,723.7		24.6
Oxides of nitrogen (expressed as NO ₂)	698,014.7		19.8
Volatile organic compounds (VOCs)	243,922.7		6.9
Total particulate matter (TPM)	161,364.8		4.6
Ammonia (total) ¹	18,942.8		0.5
Total Reduced Sulphur (TRS)	16,256.3		0.5
Methanol	11,780.4		0.3
Carbonyl sulphide	6,976.8		0.2
Hydrochloric acid	6,390.4		0.2

1. Refers to the total of both ammonia (NH₃) and ammonium ion (NH₄⁺) in solution.

Refined petroleum products retail						71,713.3	
Printing	16.0	15.0	13.0	0.0	34.4	43,549.2	6.2
Structural fires	261.1	261.1	241.8			265.9	1,450.5
Surface coatings						77,396.7	
Open sources	18,120,974.4	5,662,833.9	850,485.6	1,041.2	6,270.2	330,515.6	23,838.9
Agriculture	2,190,511.9	1,120,764.6	60,404.7			312,897.9	
Construction operations	3,685,768.4	1,100,421.6	218,011.9	660.6	2,079.6	23.6	341.6
Dust from paved roads	3,379,340.4	647,707.9	154,961.1				
Dust from unpaved roads	8,825,095.0	2,787,405.4	413,155.0				
Waste	5,718.5	2,554.3	2,353.7	376.3	3,985.9	17,019.9	13,674.7
Mine tailings	32,966.0	2,637.3	659.3				
Prescribed burning	1,574.3	1,342.8	940.0	4.2	204.6	574.1	9,822.5
Natural sources	249,534.7	212,105.0	174,674.3	147.2	185,444.9	24,249,699.2	2,054,991.9

1. Total particulate matter is made up of solid and liquid particles under 100 micrometres in diameter that are released into the atmosphere.

2. PM₁₀ is the fraction of total particulate matter that is less than or equal to 10 micrometres in diameter.

3. PM_{2.5} is the fraction of total particulate matter that is less than or equal to 2.5 micrometres in diameter.

4. SO_x is made up of gaseous oxides of sulphur, mainly sulphur dioxide (SO₂). In some cases, emissions may contain small amounts of sulphur trioxide (SO₃) and sulphurous and sulphuric acid vapour.

5. NO_x is made up of gaseous nitric oxide (NO) and nitrogen dioxide (NO₂).

6. Volatile organic compounds (VOCs) are made up of photochemically reactive hydrocarbon compounds (those that participate in chemical reactions when exposed to sunlight). They are major contributors to smog in urban areas.

Note(s): Figures may not add up to totals due to rounding. A blank space indicates that no emissions data is available or applicable.

1. CO₂ equivalent emissions are the weighted sum of all greenhouse gas emissions. The following global warming potentials are used as the weights: CO₂ = 1; CH₄ = 21; N₂O = 310; HFCs = 140 to 11,700; PFCs = 6,500 to 9,200; SF₆ = 23,900. Not all HFC, PFC and SF₆ data are presented in this table.

2. National totals exclude all GHGs from the Land use, land-use change and forestry sector.

3. Emissions from fuel ethanol are reported within the gasoline transportation sub-categories.

4. The category 'Mineral product use' includes CO₂ emissions coming from the use of limestone & dolomite, soda ash, and magnesite.

Note(s): Figures may not add up to totals due to rounding.

1. The business sector consists of all establishments, including unincorporated businesses and excluding government and non-profit institutions.

2. The non-business sector consists of general government (including government hospitals and education) and non-profit institutions.

3. Carbon dioxide equivalent emissions are estimated using global warming potentials for methane and nitrous oxide of 21 and 310 respectively.

Table 3.5-1
Energy and greenhouse gas intensity, by industry, Canada, 2007 — Primary sector

	Energy intensity ¹	Greenhouse gas intensity ^{2,3,4}
	gigajoules per thousand current dollars of production	tonnes of carbon dioxide equivalent per thousand current dollars of production
Crop and animal production	12.0	2.7
Forestry and logging	7.3	0.6
Fishing, hunting and trapping	10.0	0.7
Support activities for agriculture and forestry	10.3	0.8
Oil and gas extraction	11.4	1.1
Coal mining	9.5	0.9
Metal ore mining	5.7	0.3
Non-metallic mineral mining and quarrying	10.0	0.6
Support activities for mining and oil and gas extraction	7.4	0.5

1. Intensity of energy use is measured in gigajoules per thousand current dollars of production. The current dollar intensity measure is intended for comparing industries in a given year.
2. Intensity of greenhouse gas emissions is measured in tonnes per thousand current dollars of production. The current dollar intensity measure is intended for comparing industries in a given year.
3. Emission sources included in these estimates: combustion of fossil fuels; non-combustion uses of fossil fuels; industrial processes; agricultural soils; livestock manure and enteric fermentation. Emissions from waste management are excluded.
4. Carbon dioxide equivalent emissions are estimated using global warming potentials for methane and nitrous oxide of 21 and 310 respectively.

Note(s): Industries in the primary sector produce the raw materials employed in the economy. Industries in the secondary sector carry out activities that produce physical goods from raw materials, and industries in the tertiary sector carry out activities related to the provision of services. Industry aggregation is at the L-level of the input-output accounts of Statistics Canada. The input-output tables are built around three classification systems, namely the Input-Output Industry Classification (IOIC) for industries, the Input-Output Commodity Classification (IOCC) for commodities and the Input-Output Final Demand Classification (IOFDC) for final demand. Each classification has four level of hierarchy, consisting of the 'W' (working) level, the 'L' (historical-link) level, the 'M' (medium) level and the 'S' (small) level. The Input-Output Industry Classification (IOIC) is based on the industrial standard of the day, which is currently the North American Industry Classification System (NAICS) 2002. The IOIC uses a coding scheme that resembles NAICS, but is modified to reflect the hierarchical structure and organization of the IOIC. The NAICS definition of the IOIC classes as well as its hierarchical structure can be found in 'Input-Output Classification' at the following link: <http://www.statcan.gc.ca/imdb-bmdi/1401-eng.htm>. The hierarchical structure of the Input-Output Commodity Classification (IOCC) and the Input-Output Final Demand Classification (IOFDC) can be found at the same link.

Table 3.5-2
Energy and greenhouse gas intensity, by industry, Canada, 2007 — Secondary sector

	Energy intensity ¹	Greenhouse gas intensity ^{2,3,4}
	gigajoules per thousand current dollars of production	tonnes of carbon dioxide equivalent per thousand current dollars of production
Electric power generation, transmission and distribution	43.6	3.2
Natural gas distribution, water and other systems	5.7	1.0
Residential building construction	5.3	0.4
Non-residential building construction	4.7	0.4
Transportation engineering construction	9.1	0.7
Oil and gas engineering construction	5.5	0.4
Electric power engineering construction	3.1	0.2
Communication engineering construction	4.8	0.3
Other engineering construction	3.8	0.3
Repair construction	4.3	0.3
Other activities of the construction industry	7.4	0.5
Animal food manufacturing	8.5	1.1
Sugar and confectionery product manufacturing	6.0	0.4
Fruit and vegetable preserving and specialty food manufacturing	7.9	0.7
Dairy product manufacturing	9.4	1.5
Meat product manufacturing	8.5	1.4
Seafood product preparation and packaging	7.8	0.6
Miscellaneous food manufacturing	7.7	0.8
Soft-drink and ice manufacturing	5.6	0.4
Breweries	3.6	0.2
Wineries	4.2	0.4
Distilleries	9.7	0.6
Tobacco manufacturing	3.2	0.3
Textile and textile product mills	8.8	0.6
Clothing manufacturing	4.7	0.3
Leather and allied product manufacturing	4.9	0.3
Wood product manufacturing	8.3	0.5
Pulp, paper and paperboard mills	23.2	1.0
Converted paper products manufacturing	11.3	0.5
Printing and related support activities	7.3	0.4
Petroleum and coal products manufacturing	16.8	1.4
Basic chemical manufacturing	20.1	1.7
Resin, synthetic rubber, and artificial and synthetic fibres and filaments manufacturing	16.4	1.4
Pesticides, fertilizer and other agricultural chemical manufacturing	22.2	3.3
Pharmaceutical and medicine manufacturing	3.9	0.3
Miscellaneous chemical product manufacturing	8.8	0.6
Plastics product manufacturing	8.9	0.6
Rubber product manufacturing	9.0	0.6
Cement and concrete product manufacturing	15.1	2.0
Miscellaneous non-metallic mineral product manufacturing	16.7	1.3
Primary metal manufacturing	16.8	0.9
Fabricated metal product manufacturing	8.0	0.4
Machinery manufacturing	5.8	0.3
Computer and peripheral equipment manufacturing	3.2	0.2
Electronic product manufacturing	3.7	0.2
Household appliance manufacturing	7.2	0.4
Electrical equipment and component manufacturing	7.2	0.4
Motor vehicle manufacturing	7.1	0.4
Motor vehicle body and trailer manufacturing	7.2	0.4
Motor vehicle parts manufacturing	7.8	0.4

See notes at the end of the table.

Table 3.5-2 – continued

Energy and greenhouse gas intensity, by industry, Canada, 2007 — Secondary sector

	Energy intensity ¹	Greenhouse gas intensity ^{2,3,4}
	gigajoules per thousand current dollars of production	tonnes of carbon dioxide equivalent per thousand current dollars of production
Aerospace product and parts manufacturing	3.6	0.2
Railroad rolling stock manufacturing	9.8	0.5
Ship and boat building	6.4	0.4
Other transportation equipment manufacturing	5.4	0.3
Furniture and related product manufacturing	5.6	0.3
Miscellaneous manufacturing	6.1	0.4

1. Intensity of energy use is measured in gigajoules per thousand current dollars of production. The current dollar intensity measure is intended for comparing industries in a given year.
2. Intensity of greenhouse gas emissions is measured in tonnes per thousand current dollars of production. The current dollar intensity measure is intended for comparing industries in a given year.
3. Emission sources included in these estimates: combustion of fossil fuels; non-combustion uses of fossil fuels; industrial processes; agricultural soils; livestock manure and enteric fermentation. Emissions from waste management are excluded.
4. Carbon dioxide equivalent emissions are estimated using global warming potentials for methane and nitrous oxide of 21 and 310 respectively.

Note(s): Industries in the primary sector produce the raw materials employed in the economy. See notes at the end of the table.

Table 3.6-2 – continued

Index of energy and greenhouse gas intensity, by industry, Canada — Secondary sector

	Energy intensity ¹				Greenhouse gas intensity ^{2,3,4}			
	1995	2000	2005	2007	1995	2000	2005	2007
	1990=100							
Other transportation equipment manufacturing	90.7	87.7	99.4	98.7	89.3	89.7	101.4	99.7
Furniture and related product manufacturing	93.5	81.4	81.4	79.6	93.0	77.2	77.7	73.9
Miscellaneous manufacturing	90.2	77.7	69.2	71.2	90.8	72.2	67.6	67.7

1. Intensity of energy use is measured in gigajoules per thousand dollars of production. Constant dollar intensity measures are presented as an index, 1990=100; based on gigajoules per thousand chained fisher constant dollars of production. The constant dollar intensity should be used for trend analysis for a given industry.
 2. Intensity of greenhouse gas emissions is measured in tonnes per thousand dollars of production. Constant dollar intensity measures are presented as an index, 1990=100; based on tonnes per thousand chained fisher constant dollars of production. The constant dollar intensity should be used for trend analysis for a given industry.
 3. Emission sources included in these estimates: combustion of fossil fuels; non-combustion uses of fossil fuels; industrial processes; agricultural soils; livestock manure and enteric fermentation. Emissions from waste management are excluded.
 4. Carbon dioxide equivalent emissions are estimated using global warming potentials for methane and nitrous oxide of 21 and 310 respectively.
- Note(s):** Industries in the primary sector produce the raw materials employed in the economy. Industries in the secondary sector carry out activities that produce physical goods from raw materials, and industries in the tertiary sector carry out activities related to the provision of services. Industry aggregation is at the L-level of the input-output accounts of Statistics Canada. The input-output tables are built around three classification systems, namely the Input-Output Industry Classification (IOIC) for industries, the Input-Output Commodity Classification (IOCC) for commodities and the Input-Output Final Demand Classification (IOFDC) for final demand. Each classification has four level of hierarchy, consisting of the 'W' (working) level, the 'L' (historical-link) level, the 'M' (medium) level and the 'S' (small) level. The Input-Output Industry Classification (IOIC) is based on the industrial standard of the day, which is currently the North American Industry Classification System (NAICS) 2002. The IOIC uses a coding scheme that resembles NAICS, but is modified to reflect the hierarchical structure and organization of the IOIC. The NAICS definition of the IOIC classes as well as its hierarchical structure can be found in 'Input-Output Classification' at the following link: <http://www.statcan.gc.ca/imdb-bmdi/1401-eng.htm>. The hierarchical structure of the Input-Output Commodity Classification (IOCC) and the Input-Output Final Demand Classification (IOFDC) can be found at the same link.

Table 3.6-3
Index of energy and greenhouse gas intensity, by industry, Canada — Tertiary sector

	Energy intensity ¹				Greenhouse gas intensity ^{2,3,4}			
	1995	2000	2005	2007	1995	2000	2005	2007
	1990=100							
Wholesale trade	105.8	128.7	103.2	102.2	103.3	128.2	104.7	102.6
Retail trade	100.2	106.0	79.3	75.8	100.1	107.9	82.7	78.5
Air transportation	102.2	116.2	126.7	119.4	101.8	114.2	125.6	117.7
Rail transportation	81.8	62.1	62.7	67.2	81.9	63.2	64.2	68.7
Water transportation	102.4	100.3	112.3	125.6	103.0	100.0	112.1	123.8
Truck transportation	88.5	86.9	81.5	90.7	88.8	89.8	83.4	92.6
Transit and ground passenger transportation	91.5	79.4	83.0	88.4	91.1	78.9	80.8	84.3
Pipeline transportation	112.2	90.7	77.9	70.0	100.0	82.7	73.5	68.3
Scenic and sightseeing transportation and support activities for transport	96.5	76.5	78.1	83.4	95.5	73.3	75.8	80.8
Postal service and couriers and messengers	113.7	121.4	123.7	130.2	113.5	124.5	127.7	133.0
Warehousing and storage	91.4	79.1	57.8	57.4	89.9	74.7	59.6	58.6
Motion picture and sound recording industries	99.4	93.1	77.6	75.3	100.2	94.1	83.1	80.1
Radio and television broadcasting	99.3	108.6	106.7	116.3	99.0	107.8	109.4	116.8
Pay TV, specialty TV and program distribution and telecommunications	109.8	102.0	92.6	88.1	109.5	105.4	97.7	91.9
Publishing industries, information services and data processing service	94.5	96.0	69.4	64.4	91.9	97.5	74.4	69.6
Monetary authorities and depository credit intermediation	88.6	111.5	109.8	100.0	89.3	109.4	109.7	98.8
Insurance carriers	89.3	79.8	79.2	77.4	89.6	82.9	84.5	81.1
Lessors of real estate	97.6	92.2	88.8	97.0	98.5	90.2	91.1	98.9
Owner-occupied dwellings	82.8	89.3	115.7	113.0	83.6	87.1	116.5	113.2
Rental and leasing services and lessors of non-financial intangible associations	67.0	77.8	63.5	64.0	64.8	72.9	62.1	62.2
Other finance, insurance and real estate and management of companies	91.4	88.0	74.5	72.7	92.4	88.5	76.1	72.4
Advertising and related services	98.1	104.9	70.6	71.3	96.8	104.9	74.4	74.4
Architectural, engineering, legal and accounting services	110.2	142.4	120.6	119.6	110.6	141.2	121.0	118.7
Other professional, scientific and technical services	102.2	124.6	98.5	95.7	104.2	126.8	104.9	101.4
Administrative and support services	103.2	149.4	122.4	118.4	105.3	157.4	132.0	127.2
Waste management and remediation services	42.4	50.5	42.6	38.1	43.3	51.8	44.5	39.5
Educational services (except universities)	90.4	71.7	57.9	51.0	89.8	73.5	60.3	52.2
Health care services (except hospitals) and social assistance	85.8	110.7	107.6	118.8	86.4	104.0	104.4	113.0
Arts, entertainment and recreation	96.4	93.5	83.7	82.4	97.4	92.1	83.8	81.8
Accommodation and food services	96.6	102.6	90.5	87.1	98.4	99.2	88.3	83.1
Repair and maintenance	100.6	140.2	111.0	113.8	100.7	136.6	113.2	114.6
Grant-making, civic, and professional and similar organizations	95.6	94.4	76.5	73.1	95.0	78.6	66.5	62.9
Personal and laundry services and private households	100.8	115.7	100.4	93.2	99.7	103.5	94.8	87.3
Operating supplies	104.4	94.8	102.6	100.5	103.5	87.1	97.6	95.9
Office supplies	104.8	93.9	83.4	78.0	101.8	89.9	83.6	77.9
Cafeteria supplies	104.4	96.2	86.5	84.4	103.0	91.6	81.3	76.3
Laboratory supplies	97.4	98.0	112.4	113.2	104.0	92.1	112.0	116.4
Travel and entertainment	97.7	107.5	113.9	110.8	97.8	106.0	112.2	108.0
Advertising and promotion	97.2	98.0	80.2	78.6	95.6	98.3	83.9	81.9
Transportation margins	86.6	78.6	76.9	85.0	86.5	80.6	78.5	86.4
Religious organizations	95.7	116.0	124.0	134.1	93.8	116.0	128.3	137.0
Non-profit welfare organization	84.7	94.4	78.3	81.4	82.9	91.3	77.6	79.4
Non-profit sports and recreation clubs	94.8	110.0	109.7	120.2	95.7	95.4	95.6	102.6
Other non-profit institutions serving households	87.7	63.4	71.7	75.6	89.2	59.3	68.0	70.6
Non-profit education services	89.2	115.9	107.6	98.2	89.0	110.7	105.1	94.9
Hospitals	104.5	119.7	124.0	126.0	100.0	103.2	109.0	108.7
Government residential care facilities	82.9	76.9	80.4	82.0	83.8	69.5	71.3	70.3
Universities	90.1	123.0	108.7	111.4	89.4	119.4	107.1	109.2
Government education services	88.0	86.9	98.7	97.2	85.6	87.6	101.3	97.4

See notes at the end of the table.

Table 3.6-3 – continued

Index of energy and greenhouse gas intensity, by industry, Canada — Tertiary sector

	Energy intensity ¹				Greenhouse gas intensity ^{2,3,4}			
	1995	2000	2005	2007	1995	2000	2005	2007
	1990=100							
Other municipal government services	86.6	98.4	107.5	110.6	86.3	101.4	111.6	114.8
Other provincial and territorial government services	86.8	92.5	83.2	84.1	89.7	90.4	84.8	84.9
Other federal government services and defence services	87.9	80.4	75.8	73.5	87.0	79.0	75.9	73.7

- Intensity of energy use is measured in gigajoules per thousand dollars of production. Constant dollar intensity measures are presented as an index, 1990=100; based on gigajoules per thousand chained fisher constant dollars of production. The constant dollar intensity should be used for trend analysis for a given industry.
- Intensity of greenhouse gas emissions is measured in tonnes per thousand dollars of production. Constant dollar intensity measures are presented as an index, 1990=100; based on tonnes per thousand chained fisher constant dollars of production. The constant dollar intensity should be used for trend analysis for a given industry.
- Emission sources included in these estimates: combustion of fossil fuels; non-combustion uses of fossil fuels; industrial processes; agricultural soils; livestock manure and enteric fermentation. Emissions from waste management are excluded.
- Carbon dioxide equivalent emissions are estimated using global warming potentials for methane and nitrous oxide of 21 and 310 respectively.

Note(s): Industries in the primary sector produce the raw materials employed in the economy. Industries in the secondary sector carry out activities that produce physical goods from raw materials, and industries in the tertiary sector carry out activities related to the provision of services. Industry aggregation is at the L-level of the input-output accounts of Statistics Canada. The input-output tables are built around three classification systems, namely the Input-Output Industry Classification (IOIC) for industries, the Input-Output Commodity Classification (IOCC) for commodities and the Input-Output Final Demand Classification (IOFDC) for final demand. Each classification has four level of hierarchy, consisting of the 'W' (working) level, the 'L' (historical-link) level, the 'M' (medium) level and the 'S' (small) level. The Input-Output Industry Classification (IOIC) is based on the industrial standard of the day, which is currently the North American Industry Classification System (NAICS) 2002. The IOIC uses a coding scheme that resembles NAICS, but is modified to reflect the hierarchical structure and organization of the IOIC. The NAICS definition of the IOIC classes as well as its hierarchical structure can be found in 'Input-Output Classification' at the following link: <http://www.statcan.gc.ca/imdb-bmdi/1401-eng.htm>. The hierarchical structure of the Input-Output Commodity Classification (IOCC) and the Input-Output Final Demand Classification (IOFDC) can be found at the same link.

1. Livestock manure includes urine and feces from beef cows, heifers, milk cows, bulls, steers, calves, horses, sheep, lambs, goats, grower/finishing pigs, nursing/weaner pigs, sows, boars, steers, broilers/roasters, laying hens, pullets and turkeys. Other livestock in Canada, such as buffalo, deer, and rabbits, were not included in this analysis because their overall contribution to total manure produced is small and agreement on manure production coefficients has not been reached.

Note(s): A sub-drainage area, also called a watershed or drainage basin, is an area where all contributing surface waters share the same drainage outlet. Drainage areas channel runoff from precipitation and snow melt into stream flow. The resulting hierarchy of streams and rivers and their associated sub-drainage areas form the National Hydrological Network of Canada. There are 11 major drainage areas and 164 sub-drainage areas in Canada. Canada's entire land and fresh water area has been allocated to individual drainage areas.

British Columbia	1,211.5	1,411.7	1,264.7	1,427.7	1,492.6	1,539.0

Note(s): The data for land management practices are reported for the year preceding the census year. Since 1996, the area of land that was treated with herbicides, insecticides and fungicides was under-reported. Some respondents reported chemical expenses but not any corresponding areas to which these chemicals were applied. Telephone follow-up with a sample of these respondents confirmed that some respondents had mistakenly reported for the current year instead of the previous year as requested and, when they completed their questionnaires for 1996 to 2006, the chemicals purchased had not yet been applied.

Alberta	2,995.6	3,429.0	4,932.3
British Columbia	263.5	277.9	299.2

Note(s): The data for land management practices are reported for the year preceding the census year. Since 1996, the area of land that was treated with herbicides, insecticides and fungicides was under-reported. Some respondents reported chemical expenses but not any corresponding areas to which these chemicals were applied. Telephone follow-up with a sample of these respondents confirmed that some respondents had mistakenly reported for the current year instead of the previous year as requested and, when they completed their questionnaires for 1996 to 2006, the chemicals purchased had not yet been applied. The data since 1996 pertain to the area of land on which only insecticides were used. The 1996 to 2006 questionnaires had two separate questions on the area of land on which insecticides were used and the area on which fungicides were used. In 1981, 1986 and 1991, however, a single question asked for the area on which insecticides and fungicides were applied to the same land. Therefore, the sum of responses to the 1996 to 2006 questions is not comparable to responses to the single question in previous censuses.

Newfoundland–Labrador	25	558,789	506,732	-10.3	1.6	642,178

1. The water yield estimates are 34-year annual averages (1971 to 2004), with the exception of those estimates for drainage regions 5, 7, 16, 17, 18 and the Labrador portion of 25 which are based on 20 years of data (1975 to 1996); and drainage region 8 which is based on a 23-year annual average (1972-1994) for the Arctic Archipelago (Spence and Buke 2008), and on a 20-year annual average (1975 to 1996) for the remaining area.

Note(s): Data were derived from discharge values contained in Environment Canada, 2010, Water Survey of Canada, *Archived Hydrometric Data (HYDAT)* (www.wsc.ec.gc.ca/hydat/H2O/index_e.cfm?cname=main_e.cfm).

Source(s): Spence C., and A. Burke, 2008, "Estimates of Canadian Arctic Archipelago Runoff from Observed Hydrometric Data," *Journal of Hydrology*, Vol. 362, pages 247 to 259. Statistics Canada, Environment Accounts and Statistics Division, 2010, special tabulation.

Table 3.16
Water use in Canada, by sector, 2005

	Public utility water system	Self-supplied water system	Total	Share of total water use
	millions of cubic metres			percent
Total, all sectors	5,706.2	36,352.1	42,058.3	100.0
Thermal-electric power generation	X	X	27,825.1	66.2
Manufacturing	618.5	5,101.0	5,719.5	13.6
Residential ¹	3,195.5	575.6	3,771.1	9.0
Agriculture				
Irrigation ²		1,631.7	1,631.7	3.9
Livestock ³		321.3	321.3	0.8
Commercial and institutional ⁴	1,127.8		1,127.8	2.7
Water treatment and distribution systems ⁵	X	X	981.9	2.3
Mining (except oil and gas)	7.5	448.4	456.0	1.1
Oil and gas extraction		224.0	224.0	0.5

1. Includes an estimate for residential use of water produced by drinking water plants and for well water.

2. Data for all provinces except Alberta are from the 2007 Agricultural Water Use Survey. Alberta values are based on data reported by Alberta Agriculture and Rural Development and have been adjusted for uses other than irrigation, transportation losses and other sources of water for irrigation.

3. Sources for livestock data are documented in Statistics Canada, 2010, "Freshwater supply and demand in Canada," *Human Activity and the Environment*, Catalogue no. 16-201-X, Table 3.5.

4. Estimated using the volume of water produced by drinking water plants in Canada and subtracting municipal water intake estimates for industrial use, the residential water intake estimate, and losses.

5. Includes an estimate for water use and leakages by water treatment and distribution systems.

Note(s): Water use is defined as water intake. Figures may not add up to totals due to rounding.

Butterflies	302	0	1	4	19	24	217	10	1	2	24

1. Species that are extirpated worldwide (that is, they no longer exist anywhere).
2. Species that are no longer present in a given geographic area, but occur in other areas.
3. Species for which a formal, detailed risk assessment (COSEWIC status assessment or provincial or territorial equivalent) has been completed and that have been determined to be at risk of extirpation or extinction (that is Endangered or Threatened). A COSEWIC designation of Endangered or Threatened automatically results in a Canada General Status Rank (Canada rank) of At risk. Where a provincial or territorial formal risk assessment finds a species to be Endangered or Threatened in that particular region, then, under the general status program, the species automatically receives a provincial or territorial general status rank of At risk.
4. Species that may be at risk of extirpation or extinction and are therefore candidates for a detailed risk assessment by COSEWIC, or provincial or territorial equivalents.
5. Species that are not believed to be at risk of immediate extirpation or extinction but may require special attention or protection to prevent them from becoming at risk.
6. Species that are not believed to belong in the categories Extirpated, Extinct, At risk, May be at risk, Sensitive, Accidental or Exotic. This category includes some species that show a trend of decline in numbers in Canada but remain relatively widespread or abundant.
7. Species for which insufficient data, information, or knowledge is available with which to reliably evaluate their general status.
8. Species that are known or believed to be present regularly in the geographic area in Canada to which the rank applies, but have not yet been assessed by the general status program.
9. Species that have been moved beyond their natural range as a result of human activity. In this report, Exotic species have been purposefully excluded from all other categories.
10. Species occurring infrequently and unpredictably, outside their usual range.

1. A wildlife species that no longer exists.

2. A wildlife species that no longer exists in the wild in Canada, but exists elsewhere.

3. A wildlife species facing imminent extirpation or extinction.

4. A wildlife species that is likely to become endangered if nothing is done to reverse the factors leading to its extirpation or extinction.

5. A wildlife species that may become threatened or endangered because of a combination of biological characteristics and identified threats.

6. Formerly described as lepidopterans.

1. As of March 31, 2011.

2. Does not include species that are already on Schedule 1 and are currently having the confirmation of their status considered.

3. Only species listed on Schedule 1 of the *Species at Risk Act* (SARA) receive legal protection. This legal protection varies depending on species status, the types of species and the jurisdiction in which the species is found. The general prohibitions of SARA do not apply to species of special concern. Please see the *Species at Risk Act* for more information (<http://laws-lois.justice.gc.ca/eng/acts/S-15.3/index.html>).

Source(s): Environment Canada, Population Conservation and Management Division, 2011, special tabulation. For more information please consult the SARA Public Registry, www.sararegistry.gc.ca/default_e.cfm.

Table 3.25
Wildlife species extinct and extirpated from Canada, 2010

Species	Group	Date of extinction or extirpation ^{1,2}	Probable cause(s) of extinction or extirpation ^{1,2}
Extinct ¹			
Benthic Hadley Lake stickleback	fishes (freshwater)	1999	introduced predators
Limnetic Hadley Lake stickleback	fishes (freshwater)	1999	introduced predators
Banff longnose dace	fishes (freshwater)	1986	introduced predators; habitat alteration
Blue walleye	fishes (freshwater)	1965	commercial fishing; introduced predators
Lake Ontario kiyi	fishes (freshwater)	1964	commercial fishing; introduced predators
Deepwater cisco	fishes (freshwater)	1952	commercial fishing; introduced predators
Eelgrass limpet	molluscs	1929	loss of food source
Caribou (<i>dawsoni</i> subspecies)	mammals (terrestrial)	1920s	unknown
Passenger Pigeon	birds	1914	hunting and predation
Sea mink	mammals (marine)	1894	trapping
Labrador Duck	birds	1875	hunting; habitat alteration
Macoun's shining moss	mosses	after 1864	habitat alteration
Great Auk	birds	1844	hunting
Extirpated ²			
Karner blue	arthropods	1991	loss of food source; habitat alteration
Frosted elfin	arthropods	1988	successional change
Greater Prairie-Chicken	birds	after 1987	habitat alteration
Black-footed ferret	mammals (terrestrial)	1974	loss of food source
Striped bass (St. Lawrence Estuary population)	fishes (freshwater)	after 1968	illegal fishing
Dwarf wedgemussel	molluscs	1968	habitat alteration
Greater Sage-Grouse (<i>phaios</i> subspecies)	birds	1960s	hunting; habitat alteration
Pacific pond turtle	reptiles	after 1959	commercial harvesting; habitat alteration
Gravel chub	fishes (freshwater)	after 1958	habitat alteration
Pacific gophersnake	reptiles	after 1957	habitat alteration
Spring blue-eyed Mary	plants	after 1954	habitat alteration
Timber rattlesnake	reptiles	1941	hunting; habitat alteration
Oregon lupine	plants	after 1929	habitat alteration
Paddlefish	fishes (freshwater)	1917	habitat alteration; over-fishing
Tiger salamander (Great Lakes population)	amphibians	1915	habitat alteration
Island marble	arthropods	before 1910	loss of food source; habitat alteration
Puget Oregonian snail	molluscs	after 1905	unknown
Pygmy short-horned lizard	reptiles	after 1898	habitat alteration
Atlantic salmon (Lake Ontario population)	fishes (freshwater)	after 1898	habitat destruction and over-exploitation by a food and commercial fishery
Illinois tick-trefoil	plants	after 1888	habitat alteration
Grizzly bear (Prairie population)	mammals (terrestrial)	1880s	hunting
Incurved grizzled moss	mosses	1828	unknown
Grey whale (Atlantic population)	mammals (marine)	1800s	hunting

1. A wildlife species that no longer exists.

2. A wildlife species that no longer exists in the wild in Canada, but exists elsewhere.

Section 4

Protected areas

One approach to the loss of natural areas and the potential extinction of species is the creation of a network of protected areas. Protected areas are

defined as legally established areas (both land and water) that are regulated and managed for conservation objectives. The data found in Table 4.1 indicate the total protected land area in Canada.

Table 4.1
Terrestrial and marine protected areas by province and territory, 2011

	Protected areas ¹	Area protected		Total area of land and freshwater	Land and freshwater protected
		Marine ²	Terrestrial		
	number	square kilometres			percent
Canada	5,384	49,265	981,511	9,976,182	9.8
Newfoundland and Labrador	65	230	18,535	406,135	4.6
Prince Edward Island	119	16	156	5,955	2.6
Nova Scotia	73	22	4,598	55,386	8.3
New Brunswick	74	63	2,233	73,024	3.1

Section 5

Natural resources

This section presents a variety of statistics that describe the various resource sectors of the economy: agriculture, fisheries, forestry, minerals and energy resources.

5.1 Agriculture

The agriculture industry is one of the largest land-using economic activities in Canada. Because of agriculture's extent, agricultural practices have considerable influence on the environment. Agriculture is also a significant contributor to the economy. The agriculture and food product industries'¹ gross domestic product (GDP) are illustrated in Table 5.1 and employment in the agriculture industries is indicated in Table 5.2.

The agricultural industry in Canada has undergone significant change since 1871. The number of farms in Canada increased between 1871 and 1941, but since then the number has been declining (Table 5.3). In 1941, 732,832 farms covered 70.2 million hectares (ha) of land, with 25.2 million ha of cropland. Since then, the number of farms has decreased while farm area has remained stable and the total area of cropland has increased (Table 5.4). Production of many crops, including wheat, barley, corn for grain and dry field peas experienced growth (Tables 5.5 and 5.6). As well, new crops, such as soybeans, are now grown extensively in Canada. The number of livestock produced in Canada has also increased (Table 5.7).

5.2 Fisheries

Despite declines in some fish stocks during the last part of the twentieth century, Canadian fisheries continue to play an important role in communities in Atlantic Canada and British Columbia. The contributions of the fishing industries to GDP are outlined in Table 5.8. Employment in the fishing industries is presented in Table 5.9.

1. Sectoral GDP tables in this compendium represent industries that rely primarily on the environment for raw material inputs.

Exports and imports of fish and fish products are presented in Table 5.10. Canada continues to be a net exporter of these products.

After a steady decline throughout the early 1990s, the total catch by seafisheries has remained relatively stable (Table 5.11). Aquaculture production and value is presented in Table 5.12.

5.3 Forestry

While the Canadian economy is less dependent on this natural resource today than it once was, the logging industry is still an important and active segment of the national economy. Logs and bolts—the raw material from which lumber, plywood and other wood products are produced—account for the bulk of wood harvested from forests each year, with pulpwood making up most of the remainder (Table 5.13). Table 5.14 demonstrates the volume of roundwood harvested by province and territory.

GDP for the forest products industries is illustrated in Table 5.15. Employment in the forest products industries is shown in Table 5.16. Forest products exports made continuous gains from 1991 to 2000, but have since trended downward (Table 5.17).

5.4 Minerals

The mineral industries include the extraction and production of metallic minerals such as copper, gold, iron, nickel, silver and zinc; mineral fuels including coal, crude petroleum and natural gas; and other materials including potash, sand and gravel. Table 5.18 presents the contributions of the mining and oil and gas extraction industries to GDP, while Table 5.20 presents those of petroleum and coal products manufacturing, and primary metal manufacturing.

Employment in mining and oil and gas extraction industries is indicated in Table 5.19. Production of selected minerals and fuels by province and territory is illustrated in Table 5.21. Tables 5.22 and 5.23 detail reserves and production of selected minerals.

5.5 Energy

Table 5.24 presents primary energy consumption indicators while Table 5.25 outlines production and consumption of primary energy resources. Primary energy production, exports and imports are presented in Table 5.26. Table 5.27 outlines Canadian energy resource reserves of coal, crude oil, crude bitumen, natural gas and uranium.

The generating capacity and generation of electricity by hydro-electric, thermal-electric, nuclear and wind and tidal generating stations are outlined in Table 5.28.

Hydro-electric power generation, the main source of electric power generation in Canada, is presented in Table 5.29. Tables 5.30 and 5.31 present data on the energy consumed and generated in thermal-electric power stations while the generating efficiency of these stations is presented in Table 5.32.

1. Data exclude plots under one acre, to attain comparability with data for later years.

2. Data include the portion of the Northwest Territories located west of Manitoba.

3. Data include the districts of Assiniboia, Saskatchewan and Alberta.

4. Data exclude farms located on Indian reserves.

1. Species that are usually caught near the ocean bottom, including cod, haddock, pollock, redfish, halibut, flounder, and many others.

2. The pelagic species live in midwater or close to the surface. They include herring, capelin, swordfish, tuna, and many others.

3. Aquatic shelled molluscs (oysters, etc.) and crustaceans (crabs, shrimp, etc.).

4. Data do not add up because total also includes marine plants, lumpfish roe and miscellaneous other marine products.

5. Sea fisheries data are preliminary.

1. Includes steelhead.

Note(s): The production and value of aquaculture includes the amount and value produced on sites and excludes hatcheries or processing. Shellfish also includes some wild production. The data are collected from each of the provincial departments responsible for aquaculture.

1. Logs are defined as the stem of a tree after it has been felled; the raw material from which lumber, plywood, and other wood products are processed. Bolts are defined as raw material used in the manufacture of shingles and shakes; short logs to be sawn for lumber or peeled for veneer.

2. Estimated by provincial or territorial forestry agency.

3. Estimated by the Canadian Forest Service or by Statistics Canada.

1. Defined as the amount that was available for use in the Canadian economy. Includes the use of energy resources for non-energy purposes (for example, petrochemical feedstocks in fertilizer production). Excludes the use of wood and wastes as energy sources.

Source(s): Statistics Canada, CANSIM tables 051-0001, 128-0002, 128-0009 and 380-0017.

1. Includes natural gas liquids (ethane, butane, propane and pentanes plus).

2. Includes primary steam.

3. Defined as the amount that was available for use in the Canadian economy. Includes the use of energy resources for non-energy purposes (for example, petrochemical feedstocks in fertilizer production).

Section 6

Population

Population growth, distribution and density are major factors in determining the impacts that human activities have on the environment. Canada's population has expanded considerably since 1901, when there were 5.4 million Canadians (Table 6.1). However, growth rates have not been consistent over time. Two historical periods were characterized by high annual population growth rates. The first was from 1901 to 1911, when high immigration resulted in annual growth rates of up to 3%. The second period

of high growth followed the end of the Second World War and is generally referred to as the 'baby boom.' In contrast two periods of slow economic activity (1891 to 1901 and 1931 to 1941) coincided with slumps in population growth rates.

Population growth is generally the result of two factors: natural increase and immigration. In the last few decades international migration has become a more important factor in population growth than natural increase (Table 6.2). Tables 6.3 and 6.4 present population statistics for Canada's broad ecozones.

1. Postcensal estimates are based on the latest census counts adjusted for census net undercoverage, incompletely enumerated Indian reserves and for the estimated population growth that occurred since that census. Intercensal estimates are based on postcensal estimates and census counts adjusted for the censuses preceding and following the considered year.

2. Estimates are final intercensal up to 2005, final postcensal for 2006 and 2007, updated postcensal for 2008 and 2009 and preliminary postcensal for 2010.

3. The five following groups are referred to as NPRs: (1) persons residing in Canada claiming refugee status; (2) persons residing in Canada who hold a study permit; (3) persons residing in Canada who hold a work permit; (4) persons residing in Canada who hold a Minister's permit; (5) all non-Canadian born dependants of persons claiming refugee status, or of persons holding study permits, work permits or Minister's permits and living in Canada.

Note(s): Data are presented from July 1 to June 30. Population growth figures do not equal the sum of the natural increase and international migration. It is necessary to add the residual deviation to these data.

1. As Nunavut was created on April 1, 1999, population data is not available for 1981 and 1991. Population for 1981 and 1991 for Nunavut is included in the Northwest Territories data.

Note(s): The area figures are for land area only and are calculated by taking the total ecozone area and subtracting the surface water area in the ecozone derived from the 1-km water fraction digital dataset. The total area of Canada excluding the Great Lakes is 9,886,215 km². Including the Great Lakes the total area of Canada is 9,976,182 km².

Section 7

Households and the environment

The data in this section aim to measure the behaviours of Canadian households with respect to the environment. Tables 7.1 and 7.2 outline

household use of energy-saving lights and thermostats while Tables 7.3 and 7.4 illustrate the primary type of drinking water consumed and drinking water treatment.

Table 7.1
Use of energy-saving lights, Canada and provinces, 2009

Section 8

Economy

Gross domestic product (GDP) measures the total value of goods and services produced in Canada. Table 8.1 illustrates GDP by industry group and Table

8.2 indicates employment by industry group. Table 8.3 outlines the changes in the composition of exports and imports.

Table 8.1

Section 9

Transportation

Transportation fulfils an essential role by bringing goods to market and getting people from place to place. Tables 9.1, 9.2, 9.3, 9.4 and 9.5 outline transportation by water, rail, truck and air transport. While the majority of freight is moved by water and rail, the importance of trucking to freight transport has grown substantially. A contributing factor to increasing truck traffic on roads is the concept of 'just-in-time' delivery of freight, where parts and products are scheduled to arrive as they are needed.

The number of road motor vehicle registrations has increased (Table 9.6). Across the country, driving to work is by far the most popular commuting method (Tables 9.7 and 9.8).

The majority of petroleum products used for transportation are sold through retail pump sales. While most retail pump sales are made to individuals, some commercial vehicles including taxis and fleet vehicles also purchased retail fuel (Table 9.9). Table 9.10 outlines fuel consumption and number of vehicles by passenger bus and urban transit industries.

Table 9.1

1. The movement of one tonne over a distance of one kilometre.

2. The movement of a passenger over a distance of one kilometre. Passenger-kilometres are derived by multiplying the number of passengers by the distance travelled.

Note(s): Common carrier railways operating in Canada that provide for-hire passenger and freight services are included. Excluded from the survey are companies that provide rail support services (bridge and terminal service etc.) and sightseeing tours.

Source(s): Statistics Canada, CANSIM tables 404-0010, 404-0012, 404-0016 and 404-0017.

2009	251.2	172,611	33.4	7,522	848

1. The movement of one tonne over a distance of one kilometre.

Note(s): These figures pertain only to the long distance shipments of Canada-based long distance for-hire trucking carriers. It should be noted that for-hire trucking does not include goods shipped by 'private trucking'—trucking fleets owned or leased by companies outside of the trucking industry who look after their own shipping—or by small local carriers, such as farm trucks, company delivery trucks, and other private trucks of all sizes.

Section 10

Environmental protection expenditures

Governments in Canada impose various environmental regulations regarding the prevention or reduction of air emissions, effluents, solid waste, as well as the protection of wildlife and habitat. Industry spending on environmental protection may also be affected by environmental conventions and voluntary agreements between governments and industry representatives. Environmental protection expenditures by Canadian businesses are illustrated in Tables 10.1 and 10.2.

Pollution prevention attempts to eliminate waste and pollution before it is created in manufacturing processes. It involves continuous improvement through changes in product design, technology, operations and behaviour. The purpose of pollution abatement and control is to abate or control undesirable substances emitted during normal production activities, without any impact on the production process itself. Tables 10.3 and 10.4 illustrate the distribution of capital expenditures on pollution prevention and pollution abatement and control.

Section 11

Waste management

Many factors affect waste production. As the population increases, total waste production also increases. Economic growth can also lead to more

waste. Recycling is one way of reducing the amount of waste going to landfills. Tables 11.1 and 11.2 present disposal and diversion of waste, while Table 11.3 presents material prepared for recycling.

Table 11.1

Yukon, Northwest Territories and Nunavut	x	x	x	x	x	x	x	x	x

1. Total amount of non-hazardous waste disposal in public and private waste disposal facilities includes waste that is exported out of the source province or out of the country for disposal. This does not include waste disposal in hazardous waste disposal facilities or waste managed by the waste generator on site.
2. This information covers only those companies and local waste management organizations that reported non-hazardous recyclable material preparation activities and refers only to that material entering the waste stream and does not cover any waste that may be managed on-site by a company or household. Additionally, these data do not include those materials transported by the generator directly to secondary processors, such as, pulp and paper mills while bypassing entirely any firm or local government involved in waste management activities.
3. Waste diversion data are derived from a survey administered by RECYC-QUÉBEC.

Note(s): Figures may not add up to totals due to rounding. Per capita estimates of waste disposed and diverted materials reflect updates to population estimates.

Source(s): Statistics Canada, CANSIM tables 051-0001, 153-0041 and 153-0043.

1. Residential non-hazardous waste disposal includes solid waste produced by all residences and includes waste that is picked up by the municipality (either using its own staff or through contracting firms), and waste from residential sources that is self-hauled to depots, transfer stations and disposal facilities.
2. Non-residential non-hazardous solid waste are those wastes generated by all sources excluding the residential waste stream. These include: industrial materials, which are generated by manufacturing, and primary and secondary industries, and is managed off-site from the manufacturing operation; commercial materials, which are generated by commercial operations, such as, shopping centres, restaurants, offices, and others; and institutional materials which are generated by institutional facilities, such as, schools, hospitals, government facilities, seniors homes, universities, and others. These wastes also include construction, renovation and demolition non-hazardous waste, also referred to as DLC (demolition, land clearing and construction waste). These refer to wastes generated by construction, renovation and demolition activities. It generally includes materials, such as, wood, drywall, certain metals, cardboard, doors, windows, wiring, and others. It excludes materials from land clearing on areas not previously developed as well as materials that include asphalt, concrete, bricks and clean sand or gravel.
3. The waste disposal data prior to 2006 were derived from a survey administered by RECYC-QUÉBEC.

Note(s): Total amount of non-hazardous waste disposal in public and private waste disposal facilities includes waste that is exported out of the source province or out of the country for disposal. This does not include waste disposal in hazardous waste disposal facilities or waste managed by the waste generator on site.

Section 12

Research and development

The analysis of investment in research and development is one way to monitor the commitment to develop science and technology. Expenditures on

research and development in the higher education sector are shown in Table 12.1. Federal spending on research and development aimed at control and care of the environment can be found in Table 12.2.

Table 12.1

1. The research and development intramural expenditures are managed and carried out primarily by federal government employees. Non-program (indirect costs) are excluded.

2. The management and conduct of the research and development extramural expenditures are entrusted to a non-federal organization.

Section 13

Legislation

The aim of the *Canadian Environmental Protection Act* (CEPA) is to prevent pollution and protect the environment and human health. It also provides enforcement officers with the authority to address cases of alleged non-compliance with the Act. Enforcement

activities include inspection to verify compliance, investigation of alleged violations, measures to compel compliance without resorting to formal court action, and measures to compel compliance through court action. CEPA enforcement activities are presented in Table 13.1.

1. Inspections verify compliance with the *Canadian Environmental Protection Act* (CEPA). They may be on-site (at the site of a facility, plant, structure, border crossing, airport or other port of entry, on a ship, aircraft, or other means of transport) or off-site. Off-site inspections were previously called administrative verifications.
2. The tracking of off-site inspections or administrative verifications only started in 1998/1999. However, on-site inspection numbers prior to this time may have included some administrative verifications.
3. Investigations involve gathering, from a variety of sources, evidence and information relevant to a suspected violation.
4. Written warnings indicate the existence of a minor violation, in order that the alleged offender can take notice and return to compliance.
5. Written directions oblige the regulatee responsible for the potential violation to take all reasonable measures to remedy any dangerous conditions and/or to reduce any danger to the environment.
6. A legal proceeding for the purpose of determining the guilt or innocence of an accused (that is, person and/or organization) under CEPA.

Note(s): Data is based on the federal government fiscal year which is from April 1 to March 31.
