Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

User information

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- P preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published

Data quality symbols

When the figure is not accompanied by a data quality symbol, it means that the quality of the data was assessed to be "acceptable or better" according to the policies and standards of Statistics Canada. To denote specific levels of "acceptable or better" quality, letter grades such as ^A to ^D should be used.

Letter, coefficient of variation and rating

- | | |
|---|-------------------------------|
| A | 0.00% to 4.99% = excellent |
| B | 5.00% to 9.99% = very good |
| C | 10.00% to 14.99% = good |
| D | 15.00% to 24.99% = acceptable |

Notes

Totals may not add due to the rounding procedures used to protect the confidentiality of the respondents.

Acknowledgements

First to be thanked are Canadian farmers. The success of the Farm Financial Survey rests upon the continued assistance of the thousands of producers who participate every year.

Special thanks are extended to Agriculture and Agri-Food Canada for its contribution to the realization of this publication.

Highlights

Canadian Farm Financial Overview—2009

- Average net cash farm income decreased 2% in Canada in 2009 after showing no increase in 2008 compared with 2007. Average gross revenue increased 5% from 2008 while at the same time average farm expenses increased by 6%. Program payments and insurance proceeds decreased 7% in 2009 after remaining largely unchanged in 2008.
- Average farm assets increased 7% to \$1,695,298 while average farm liabilities also increased 7% to \$323,146. The average market value of farm land and buildings continued to increase in 2009, by 10% to \$1,013,697. The average market value of quota increased by 1% in 2009 compared with a 6% increase in 2008. The average value of market livestock increased for the first time in several years (+6%). Overall, the average net worth of farm operations increased 7% to reach \$1,372,153. The average debt-to-equity ratio per farm remained unchanged at 24% in 2009.

Farm Financial Summary, by Farm Type—2009

- For grain and oilseed farms, average net cash income dropped 11% as gross revenue increased 4% while operating expenses outpaced sales, increasing 7% compared with 2008. The average grain and oilseed farm reported net cash income of \$46,757 in 2009 compared to \$52,634 in 2008. For the detailed expenses that the survey tracks, the largest increases were for heating fuel, seed and plant costs, wages and pesticide, herbicide, fungicide and insecticide expenses. Average farm assets increased 8% while average farm liabilities rose 10%, which resulted in an average net worth increase of 8%. The debt-to-equity ratio for Canadian grain and oilseed farms remained unchanged at 18%.
- Gross revenues of hog operation rose 18% in 2009 with increases in both farm sales (+19%) and program payments and insurance proceeds (+13%). Net cash income rose 60% from \$10,407 in 2008 to \$16,602 in 2009. The average value of assets for hog farms increased in 2009, up 12%, representing the first increase since 2006. Average liabilities continued to rise, increasing 8% in 2009. For three consecutive years, the net worth of hog producers decreased; however, in 2009 the average net worth of hog operations increased by 15%. The debt-to-equity ratio of hog operations increased by 13 percentage points to reach 69% in 2008 and remains similar, at 65%, for 2009.
- Net cash farm income of cattle operations increased for the second consecutive year, up 22% in 2009 to reach \$6,491. While gross farm revenue increased by 2%, operating expenses also increased by the same amount. The average asset value of cattle operations increased 12% helping to shore up average net worth, which increased by 12% in 2009. The debt-to-equity ratio remained on par with 2008 at 18%.
- Dairy farms experienced a decrease of 1% in net cash farm income due to a 5% increase in expenses that offset a 4% increase in gross revenue. Both assets and liabilities rose in 2009 with an overall increase of 1% in net worth. Quota value rose 3% in 2009 following a 6% rise in the previous year. The debt-to-equity ratio remained largely unchanged from 2008 at 39%.
- Average net cash farm income for poultry and egg farms dropped 6% in 2009 after a 12% increase in 2008. Farm asset values climbed on average 11%, with the average market value of quota increasing 9% compared with 2008. The increase in asset values combined with a decrease of 8% in average farm liabilities resulted in an increase of 17% in the average net worth of poultry and egg farms in 2009. The debt-to-equity ratio dropped to 24% in 2009 after increasing to 31% in 2008 from 26% in 2007.

- Average expenses outpaced increases in gross revenues for potato farms to result in a 1% decrease in average net cash farm income following a 51% increase in 2008. However, accounts receivable were 15% higher in 2009. Both assets and liabilities increased in 2009 following a decrease in both in 2008. The average net worth of a potato farm increased 2% in 2009. The debt-to-equity ratio of potato operations rose 13 percentage points to reach 47% in 2009.
- The average net cash farm income of vegetable farms had been declining since 2005; however, in 2009, it rose by 29% to reach \$59,893. Fruit farms, on the other hand, experienced a 57% drop in average net cash farm income. Fruit farms in BC experienced a drop in net cash income of 73%, in large part due to depressed prices and weather-related crop damage. The average market value of land and buildings of vegetable farms increased 19% in 2009, driving up average total assets. Although average liabilities increased, the average net worth rose 14%. Fruit farms, on the other hand, experienced a decrease of 4% in average assets along with a rise of 7% in liabilities. Net worth, as a result, decreased in 2009 by 6%. The debt-to-equity ratio rose three percentage points for both fruit and vegetable farms to settle at 28% for vegetable operations and 26% for fruit operations.
- In 2009, greenhouse, nursery and floriculture operations reported a 27% increase in average net cash farm income as a decrease in average operating expenses outstripped the 8% decrease in average gross revenue. Both average assets and average liabilities decreased, with overall average net worth falling 2% in 2009. The debt-to-equity ratio for greenhouse, nursery and floriculture operations has continued to decline since reaching a high of 54% in 2005 to rest at 37% in 2009.

Capital Investments And Sales

- In 2009, the average Canadian farm continued to invest in capital. Average investments per farm increased by 22% to \$73,340 in comparison to 2007 (the last year for which capital investments and sales data is available). Machinery purchases continued to represent the bulk of these investments with \$36,111 spent on average per farm. Producer investments in farm real estate also increased in 2009, by 44% compared with 2007.
- Capital sales increased as well in 2009 compared with 2007, by 28%. Sales and trade-ins of machinery and equipment were largely responsible for this increase.
- Overall, net capital investments (average investments minus average sales) increased by 19% compared with 2007. Average net capital invested in 2009 was \$49,645 compared with \$41,569 in 2007.

What's new

Prior to reference year 2009, liabilities data was published for banks and credit unions/caisses populaires separately. These two sources of debt have been combined to enhance the quality of the published data.

Analysis

Profile of Canadian young farmers

In Canada, the operators of 53% of farms with revenue of \$10,000 or more are 55 years of age or older. In 2008, those farmers possessed \$134.2 billion of the \$247.5 billion of total farm assets. It is reasonable to expect a massive transfer of farm assets from the baby-boomer generation to the new generation of farmers over the next fifteen years.¹ The purpose of this article is to describe farms managed by new generations of farmers and compare them to farms without young farmers. The results are based on the 2009 Farm Financial Survey. More complete information will be available upon the release of the 2011 Census of Agriculture data.

For this article, farms were classified in these groups:

- Farms with only young operators: Farms with one or more operators where all operators are under the age of 40. On these farms, it is the young operators who are making all the business decisions.
- Same generation farms: Farms with more than one operator where the age difference between the oldest and youngest operator is less than 20 years and where at least one operator is under the age of 40.
- Multiple generation farms: Farms with more than one operator where the age difference between the oldest and youngest operator is 20 years or more and at least one operator is under the age of 40.
- Farms without young operators: Farms with one or more operators where all of the operators are aged 40 or over.

Table 1 shows that, in 2009, the majority of farms (79.4%) had no young operators. The remaining 20.6% of farms had at least one young operator. Among these farms, 50.1% were multiple generation farms and 39.5% were farms with only young operators.

Table 1
Distribution of farms by farm group, Canada, 2009

	number	percent
All farms	150,672	100.0
Farms with at least one young operator	31,012	20.6
Farms with only young operators	12,249	8.1
Same generation farms	3,220	2.1
Multiple generation farms	15,544	10.3
Farms without young operators	119,659	79.4

Source(s): Statistics Canada, 2009 Farm Financial Survey.

Quebec and Ontario had relatively more farms with young operators, followed by the Prairies. In the Atlantic provinces, there were fewer farms with young farmers. Interestingly, the Prairies had relatively more farms operated only by young farmers (Figure 1).

1. Statistics Canada, 2008 Farm Financial Survey, Catalogue no. 21F0008XWE.

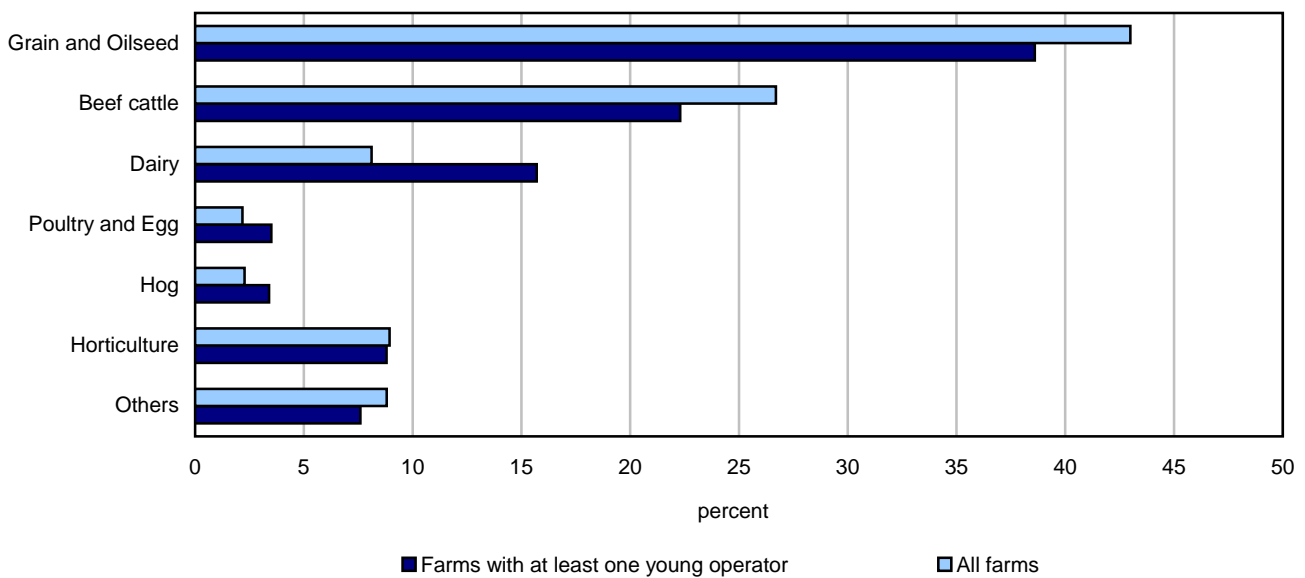

Chart 1
Distribution of farms by farm group and region, 2009

Source(s): Statistics Canada, 2009 Farm Financial Survey.

Figure 2 shows the majority of farms with at least one young farmer were grain and oilseed operations (38.6%) or beef cattle farms (22.3%). However, these types of farms are the most common in Canada. Dairy farms accounted for 15.7% of farms in this group.

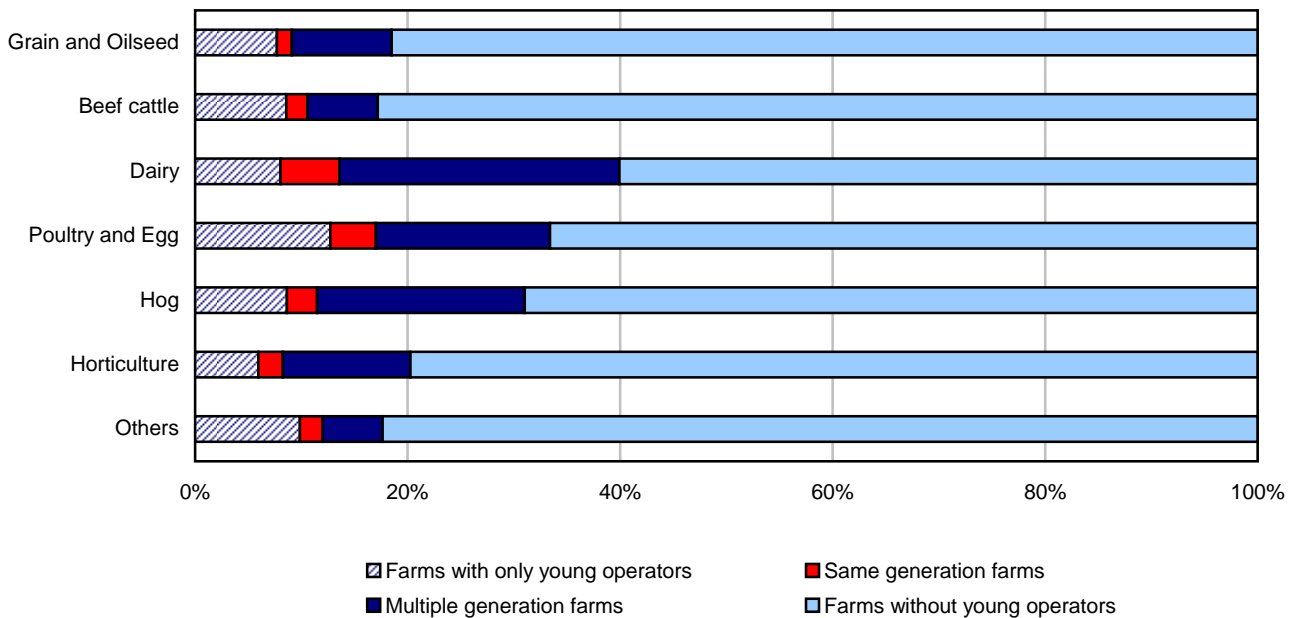

Chart 2
Distribution of farms by farm group and region, 2009

Source(s): Statistics Canada, 2009 Farm Financial Survey.

While there are fewer dairy, hog, poultry and egg farms in Canada, a higher share of these farms had at least one young farmer (Figure 3). Just over 40% of dairy farms, 33.4 % of poultry and egg farms and 31.0 % of hog farms had at least one young farmer. With respect to dairy and poultry, the greater price stability and higher income provided by the supply management system under which they operate may be appealing factors for young farmers. As for hog farms, the distribution may reflect the fact that this type of production lends to opportunities to custom/contract feed livestock for others.

Chart 3
Distribution of farms by farm group and type, Canada, 2009

Source(s): Statistics Canada, 2009 Farm Financial Survey.

Almost half of farms with at least one young operator (49.5%) were small- or medium-sized farms (with annual farm revenues of \$10,000 to \$249,999). However, large farms (revenues of \$250,000 to \$999,999) and very large farms (revenues of \$1,000,000 and over) had proportionally more young operators and were largely multiple generation farms (Figure 4).

Average net operating income² varies between farm type and farm size, with larger farms generally being more profitable than smaller farms in the same sector. Overall, farms with at least one young operator had a higher net operating income (\$71,211) than farms without young operators (\$30,594). In particular, multiple generation farms, which are generally larger and more established, had the highest level of net operating income (\$97,561). Farms operated solely by young farmers had an average net operating income of \$40,820 (Table 2).

2. Net operating income is the profit or loss of the farm operation measured by total operating revenues minus total operating expenses, excluding capital cost allowance, the value of inventory adjustments and other adjustments for tax purposes.

Chart 4
Distribution of farms by farm group and size, Canada, 2009

Source(s): Statistics Canada, 2009 Farm Financial Survey.

In 2009, farms with at least one young farmer received on average higher program payments³ than farms without young operators (\$24,311 versus \$13,585). However, program payments were quite different between farm groups; same generation and multiple generation farms had the highest average program payments (just under \$30,000) and farms with only young farmers had the lowest with \$16,062.

Table 2
Farm financial indicators, averages by farm group, Canada, 2009

	Net operating income	Program payments	Farm assets	Farm liabilities	Farm net worth
	dollars		million of dollars		
All farms	38,954	15,793	1.7	0.323	1.4
Farms with at least one young operator	71,211	24,311	2.4	0.647	1.8
Farms with only young operators	40,820	16,062	1.3	0.406	0.9
Same generation farms	59,626	28,509	2.4	0.727	1.6
Multiple generation farms	97,561	29,942	3.3	0.820	2.5
Farms without young operators	30,594	13,585	1.5	0.239	1.3

Source(s): Statistics Canada, 2009 Farm Financial Survey.

The asset value of the average farm in Canada has steadily increased over the last decade due to consolidation and the appreciation in the value of farmland and buildings and other assets. At the same time, total farm liabilities have increased as record low interest rates have allowed producers to take on more debt without necessarily increasing interest expenses.

Farms with at least one young farmer owned on average \$2.4 million in assets in 2009, as compared with \$1.5 million for farms without young operators. Multiple generation farms had the highest level of assets at \$3.3 million, followed

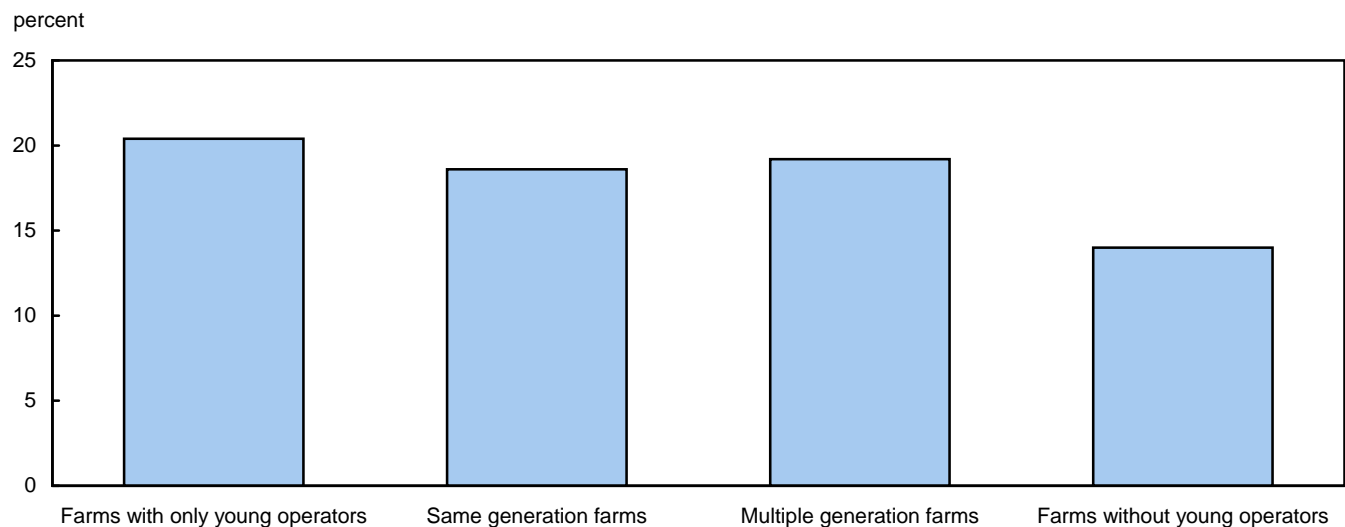

3. Program payments include payments related to current agricultural production and paid directly to producers. Insurance payments are included.

by same generation farms at \$2.4 million. Farms with only young farmers had the lowest average level of assets at \$1.3 million.

Farms with at least one young farmer owed on average \$647,000, as compared to \$239,000 for farms without young operators. Farms with at least one young farmer had higher average net worth⁴ (\$1.8 million) compared to farms without young operators (\$1.3 million). Nevertheless, net worth varied between farm groups, with average net worth for multiple generation farms being \$2.5 million and \$0.9 million for farms with only young farmers.

Profit margins⁵ were higher for farms with at least one young farmer compared to other farms, indicating better farm performance. Based on the median, 50% of farms with a young operator earned profit margins exceeding 19.4% as compared to 14.0% for farms without young operators (Figure 5).

Chart 5
Profit margin, median by farm group, Canada, 2009

Source(s): Statistics Canada, 2009 Farm Financial Survey.

Based on gross revenue generated per dollar of farm assets,⁶ farms with at least one young farmer utilized their farm assets more effectively compared to farms without young operators. Specifically, they generated \$0.25 of gross revenue per dollar of total assets, as compared to \$0.19 for farms without young operators. Farms operated solely by young farmers had the highest gross revenue per dollar of total assets at \$0.27 (Table 3).

4. Net worth is the difference between the market value of the farms assets and the value of the liabilities.

5. Profit margin equals net operating income and interest expense divided by gross farm revenue.

6. Gross revenue per dollar of farm assets is calculated by dividing the gross revenue by total farm assets at market value.

Table 3
Farm financial indicators by farm group, Canada, 2009

	Profit margin	Gross revenue per assets	Return on assets	Debt-to-asset
	percent	dollar	percent	ratio
All farms	15.2	0.20	0.7	0.17
Farms with at least one young operator	19.4	0.25	4.6	0.28
Farms with only young operators	20.4	0.27	6.1	0.33
Same generation farms	18.6	0.25	3.4	0.31
Multiple generation farms	19.2	0.24	3.7	0.24
Farms without young operators	14.0	0.19	-0.2	0.14

Source(s): Statistics Canada, 2009 Farm Financial Survey.

Return on assets⁷ represents the return generated from both debt and equity financing in the business. Farms with at least one young operator generated higher returns on assets at 4.6% compared to farms without young operators at -0.2%. Farms with only young operators had the highest return on assets at 6.1%.

Due to the higher levels of debt held by farms with at least one young operator, these farms had a higher debt-to-asset ratio⁸ (0.28), compared to farms without young operators (0.14). As expected for businesses in the starting phase, farms with only young operators had the highest debt-to-asset ratio of all the groups (0.33) as they are likely starting a new farm business and may have only recently invested in land, buildings, machinery and equipment.

Chart 6
Farm financial ratios by farm group, Canada, 2009.

Source(s): Statistics Canada, 2009 Farm Financial Survey.

7. Return on assets equals net operating income and interest expense divided by total farm assets at market value.

8. Debt-to-asset ratio is calculated by dividing total farm liabilities by total farm assets at market value. This ratio measures the percentage of farm's assets financed through creditors.

Introduction

In 1993, the Farm Financial Survey (FFS) was created to replace the Farm Credit Corporation Survey (FCC). Since 1981, the FCC Survey had been conducted on an ad-hoc basis by the Farm Credit Corporation, Agriculture and Agri-Food Canada (AAFC) and Statistics Canada. The Farm Credit Corporation withdrew from this project, but there was still a need for AAFC and Statistics Canada to maintain a similar survey on a regular basis.

At present, AAFC finances this survey as they require accurate data concerning the current and long-term viability of farms and the financial health of farm families. The survey collects information on assets, liabilities, revenues, expenses, capital investments and capital sales. Crop and livestock information is also collected to measure physical characteristics of the farms.

- The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
- Canadian and regional balance sheets include the following farm types: beef cattle ranching and farming including feedlots; dairy cattle and milk production farms; fruit and nut farms; grain and oilseed farms; greenhouse, nursery and floriculture farms; hog and pig farms; other vegetable and melon farms; potato farms; poultry and egg farms.
- Net worth is the difference between market value of the farms assets and the value of the liabilities.
- From 1995 to 2007, the data represent the balance outstanding from all funds of the Net Income Stabilization Accounts (NISA). Beginning in 2009, the data represent the balance outstanding in the AgriInvest account(s).

- The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
- Canadian and regional balance sheets include the following farm types: beef cattle ranching and farming including feedlots; dairy cattle and milk production farms; fruit and nut farms; grain and oilseed farms; greenhouse, nursery and floriculture farms; hog and pig farms; other vegetable and melon farms; potato farms; poultry and egg farms.
- Net worth is the difference between market value of the farms assets and the value of the liabilities.
- From 1995 to 2007, the data represent the balance outstanding from all funds of the Net Income Stabilization Accounts (NISA). Beginning in 2009, the data represent the balance outstanding in the Agrilinvest account(s).

- The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
- Canadian and regional balance sheets include the following farm types: beef cattle ranching and farming including feedlots; dairy cattle and milk production farms; fruit and nut farms; grain and oilseed farms; greenhouse, nursery and floriculture farms; hog and pig farms; other vegetable and melon farms; potato farms; poultry and egg farms.
- Net worth is the difference between market value of the farms assets and the value of the liabilities.
- From 1995 to 2007, the data represent the balance outstanding from all funds of the Net Income Stabilization Accounts (NISA). Beginning in 2009, the data represent the balance outstanding in the Agrilinvest account(s).

Net worth 3	689,366 A	717,553 A	915,941 A	1,068,941 A	1,178,162 A

- The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
- Canadian and regional balance sheets include the following farm types: beef cattle ranching and farming including feedlots; dairy cattle and milk production farms; fruit and nut farms; grain and oilseed farms; greenhouse, nursery and floriculture farms; hog and pig farms; other vegetable and melon farms; potato farms; poultry and egg farms.
- Net worth is the difference between market value of the farms assets and the value of the liabilities.
- From 1995 to 2007, the data represent the balance outstanding from all funds of the Net Income Stabilization Accounts (NISA). Beginning in 2009, the data represent the balance outstanding in the Agrilinvest account(s).

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

Net cash farm income³	68,120	74,493	89,699	62,439	62,406^E

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Fruit and nut farms, other vegetable and melon farms, potato farms and greenhouse, nursery and floriculture farms data are only available at the Canada level due to confidentiality.
3. Net worth is the difference between market value of the farms assets and the value of the liabilities.
4. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

- The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
- Net worth is the difference between market value of the farms assets and the value of the liabilities.
- Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

- The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
- Net worth is the difference between market value of the farms assets and the value of the liabilities.
- Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net capital investment is total capital investment minus total capital sales.
3. Capital investments and sales data are collected biennially beginning in reference year 2005.

Data concepts & methods

Introduction

In 1993, the Farm Financial Survey (FFS) was created to replace the Farm Credit Corporation Survey (FCC). Since 1981, the FCC Survey had been conducted on an ad-hoc basis by the Farm Credit Corporation, Agriculture and Agri-Food Canada (AAFC) and Statistics Canada. The Farm Credit Corporation withdrew from this project, but there was still a need for AAFC and Statistics Canada to maintain a similar survey on a regular basis.

At present, AAFC finances this survey as they require accurate data concerning the current and long-term viability of farms and the financial health of farm families. The survey collects information on assets, liabilities, revenues, expenses, capital investments and capital sales. Crop and livestock information is also collected to measure physical characteristics of the farms.

This overview provides a description of the sample design, sample selection procedures, collection methods and estimation procedures for the Farm Financial Survey.

Sampling frame

The target population for the survey consists of all Canadian farms that were active at the end of the reference year 2009. These are identified using the 2006 Census of Agriculture and updated by the usual survey programs. Due to operational constraints and respondent burden considerations, some specific farms are excluded from the target population to obtain the survey population. The exclusions are: farms from the 2006 Census of Agriculture with less than \$10,000 in sales from agricultural activities; institutional farms; community pastures; farms on First Nations reserves; and farms that are part of multi-holding companies. The lower boundary of \$10,000 has been used since FFS 1998. Prior to this, the cut-off had been \$2,000.

A preliminary list frame containing all farms from the 2006 Census of Agriculture was created without the farms defined by the previously mentioned exclusion rules.

Users should be careful when comparing years of the FFS; the list frame for FFS2007 and earlier was created using the 2001 Census of Agriculture, while the list frame for FFS2008 and later was created using the 2006 Census of Agriculture. Some differences in the data may be a result of changes in the list frame and might not be reflective of changes in the population.

Frame Coverage

Farms are added to the preliminary list frame to compensate for the undercoverage of the 2006 Census itself and for new farms that started their activities since the Census. The process of adding farms to the frame was done for the first time in FFS 2000. Prior to the 2004 survey occasion, fiscal farms were added to the frame. As of the 2004 occasion, farms contacted by the annual Farm Update Survey (FUS) were the main source of additional farms. The FUS used tax return information to contact a sample of new farms or farms missed by the 2001 Census. Farms determined to be active and with a gross farm income greater than \$50,000 were added to the list frame. Starting with next year's FFS, the Continuous Frame Update (CFU), which can be thought of as a completely redesigned FUS, will be used to identify farms that should be added to the survey frame. For this survey occasion, however, no non-Census farms were added to the frame.

Two main sources of frame under-coverage remain: new farms that started their activities after Census 2006, and farms whose sales in 2005 were less than the \$10,000 threshold, but which have surpassed the threshold since then.

Stratification of the List Frame

The frame was stratified according to AAFC's needs and recommendations by specialists in statistical methods. Since there was a requirement by AAFC for estimates by province, farm type and farm size (as measured by sales and capital), the list frame was stratified by these variables.

Within each province, the 11 farm types of primary interest are Dairy, Beef, Hogs, Poultry-Layers, Poultry-Broilers, Wheat/Grain/Oilseeds, Potatoes, Fruits, Vegetables, Greenhouses, and Feedlots (Alberta only). In previous FFS designs, farms that did not belong to one of the farm types of primary interest were all assigned a farm type of "Other". This led to some very heterogeneous strata whose members sometimes had very large survey weights.

The redesign of FFS2008 diminished the impact of this issue. First, as many farms as possible were promoted to non-other strata by using more information to identify the primary commodity for each farm. The second change was to split the "Other" farms into groups to increase the homogeneity within each of these strata. The new "Other" strata is comprised of Sod/Nursery, Sheep/Goats, Bees, Horses, Livestock combinations, All Other Animals, Hay, All Other Crops, Other Atlantic Animals and Other Atlantic Crops.

Within each province, farm types were sub-divided into a maximum of five strata based on farm size, as measured by the revenue (which includes program payments) and the capital reported on the 2006 Census. The definition of farm size was another aspect that was redesigned for FFS2008. As was done in other redesigned agricultural surveys, all farms with less than \$25,000 in sales were set into their own stratum, so that we could investigate their contribution to the estimates. Farms with sales greater than \$25,000 were split into two sales groups. Then, the smaller of the two sales groups above \$25,000 was further stratified into three groups based on the total farm capital (value of machinery, livestock, and land and buildings owned). Table 1 below illustrates the number of farms in the survey frame.

Text table 1
FFS survey frame and sample

Continuous Frame Update survey farms	0	0	0	0	0	0
Total	229,373	52,647	0	176,726	14,504	13,483

Sample Allocation

The initial sample size is overstated to compensate for farms that have become out of scope since the last Census and for the farms that participate in the Large Agricultural Operation Statistics (LAOS) program. These farms are excluded from Computer-Assisted Telephone Interviewing (CATI) collection. Farms that participate in the LAOS program are contacted by a specialized team at head office; 158 of these were sampled for this survey occasion.

The sample size is allocated first at the domain level, which is defined as province by farm type. It is then allocated at the stratum level, which is defined as size class.

Allocation to the Farm Types

The total sample size is determined by finding an acceptable balance between data quality and operational constraints. As in the previous occasion of the survey, the sample size was set at 14,000 farms. Reliable provincial estimates are required for key financial variables for the major farm types used in the stratification. Given this requirement, the sample size is allocated to each stratum based on targeted coefficients of variation (CV) for estimates of key financial variables. The CV is defined as the ratio of the standard error over the estimate.

Prior to the redesign, the data quality constraints were set as follows: for estimates at the province level or at the farm type level, the target CV for revenue was set at 2.7%. There were also quality requirements at certain province and farmtype combinations of interest; for these, target CVs between 3.7% and 4.4% were set for estimated revenue.

The redesign allowed for a more restrictive strategy, without necessarily increasing the sample size. It was found that the target CVs could be set at 2% for provinces or farm types, and 4% for province and farmtype combinations of interest. Instead of these targets being applied only to revenue estimates, they were applied simultaneously to both revenue and assets, as provided in the 2006 Census.

Allocation to the Strata

Once the sample sizes by domain were determined, Neyman allocation was used to distribute the sample to the farm size strata. This method minimizes the farm type CVs for a given sample size. Some operational constraints had to be considered.

First, within a stratum, a minimum sample size was set to ensure that the stratum is represented despite possible non-response. This minimum was set at 5 (or the total stratum size if it was smaller than 5). Second, within a stratum, a minimum sampling rate (sample size divided by the population size) had to be satisfied to ensure that each farm would not represent a too important portion of the population at the estimation stage. In such a case, the estimates would become too dependent on a small number of farms and would be less reliable. The chosen minimum rate was 1/50, leading to design weights that did not exceed 50.

There were no new farms added to the frame for this occasion, but in previous occasions, Neyman allocation was used to allocate the sample of FUS farms. The minimum sampling rate was set at 1/10. Since CFU farms will be added to the appropriate stratum in the future, they can be sampled along with the existing farms.

Sampling

The sample was drawn from a frame based on the 2006 Census of Agriculture.

Sample Selection

As described previously, the sample sizes to be drawn from each stratum were determined using Neyman allocation. Once these sample sizes were set, a simple random sample of farms was selected from within each stratum. This is done by assigning a random number to each farm within the stratum, sorting the farms accordingly, and then selecting from the list until the required sample size is reached.

Collection period and overlap with other surveys

Data collection for the current FFS took place from late June until early August 2010. The main advantage of this collection period is that having received the financial reports back from their accountants, the respondents are in a

better position to reply to the financial questions. One disadvantage of the new collection period is that Statistics Canada carries out collection for several other agricultural surveys around this time. Thus, in order to reduce the burden on respondents, overlap with other surveys had to be controlled.

The July Livestock survey had a collection period close to the FFS; therefore a farm selected for both surveys was replaced by another farm for FFS. The new farm was selected randomly from available farms that were in the same FFS stratum and the same Livestock stratum. If such a replacement farm could not be found, the originally sampled farm was retained. This strategy reduced overlap between the two surveys by approximately 67%. The same coordination strategy was used to control the overlap with the Atlantic survey and the June Crops survey, reducing the overlap with the FFS by approximately 60% and 75% respectively.

The July Crops survey had a collection period that directly overlapped with the FFS collection period. It was decided to completely eliminate the overlap between these two samples. Sample coordination was used to minimize the overlap; after having reduced the overlap by almost 90%, the remaining farms were omitted from the FFS sample.

Types of Contact

Surveys prior to FFS 1998 relied on personal interviews. In December of 1996, a test was conducted to evaluate the quality of responses to the FFS questionnaire through telephone interviews. Based on the result of this test (see CARON [1998]), it was decided that the 1998 FFS could be conducted using telephone interviews. This method reduced the cost of data collection without compromising the quality of the data. Some of these savings were allocated to increase the overall sample size. For this survey occasion, as has been done in recent years, a paper questionnaire was sent to the respondents for preparation purposes, and the survey was carried out as a telephone interview from the regional offices.

Estimation

The estimation process includes an edit and imputation procedure where basic verifications are performed on the survey data and imputations are done when required. The imputed survey data are used as input to the estimation system.

Sample Weights

The sample weights are computed as the ratio of the number of farms in the population over the actual sample size observed within each stratum. Farms that did not provide valid data, because they were a refusal, a no contact, or they failed a large number of edits, are excluded from the sample counts; the weights of the other sampled farms are increased to compensate for this non-response. This practice is referred to as raising factor adjustment. Sampled farms that were out of business retain their design weight, but all their data is set to zero. This is done to represent other farms that were on the frame, but were in fact out of scope.

Level Estimation

Once the weights have been calculated for each record, any level of required estimates may be obtained using domain estimation (Canada, provincial, crop districts, etc.). The estimates are accompanied by the appropriate CV's.

Data accuracy

Data reliability

The statistics contained in this publication are estimates derived from a random sample of Canadian farms and, as such, are subject to sampling and non-sampling errors. Therefore, the quality of the estimates depends on the combined effect of these types of errors.

Sampling errors

These errors arise because observations are made only on a sample and not on the entire population. The sampling error depends on such factors as the size of the sample, the variability of the characteristic of interest in the population, the sampling design and the method of estimation. For example, for a given sample size, the sampling error will depend on the stratification procedure employed, allocation of the sample, choice of the sampling units and method of selection. In sample surveys, since inference is made about the entire population covered by the survey on the basis of data obtained from only a part of the population, the results are likely to be different than if a complete census was taken under the same general survey conditions. The most important feature of probability sampling is that the sampling error can be measured from the sample itself.

Non-sampling errors

These errors are present whether a sample or a complete census of the population is taken. Non-sampling errors may be introduced at various stages of data processing (such as coding, data entry, editing, weighting, tabulation, etc.) and include response errors introduced by the farm operators as a result of misclassifications. All efforts are undertaken to minimize non-sampling errors through extensive edits and data analysis, but some of these errors are outside the control of Statistics Canada.

Sampling error measures

The sample was selected using stratified simple random sampling. This means that farm operations were randomly selected into each stratum. The resulting sample is just one of many possible samples that could have been selected. If it was possible that each one of these samples could be surveyed under essentially the same conditions, with an estimate calculated from each sample, it would be expected that the sample estimates would differ from each other. The average estimate derived from all these possible sample estimates is termed the expected value. The expected value can also be expressed as the value that would be obtained if a census enumeration was taken under identical conditions of collection and processing. An estimate calculated from a sample survey is said to be precise if it is near the expected value.

Sample estimates may differ from this expected value of the estimates. However, since the estimate is based on a probability sample, the variability of the sample estimate with respect to its expected value can be measured.

Guides to the precision (reliability) of sample estimates or potential size of sampling errors are provided through sampling variance (defined as the average, over all possible samples, of the squared difference of the estimate from its expected value) or the standard error (square root of the sampling variance) of the estimates. The standard error and variance are measures of precision in absolute terms. The coefficient of variation (CV), defined as the standard error divided by the sample estimate, is a measure of precision in relative terms. For comparison purposes one may more readily compare the sampling error of one estimate to the sampling error of another estimate, through the use

of the coefficient of variation. In this publication, the coefficient of variation is used to measure the sampling error of the estimates.

The estimates contained in this publication have been assigned a letter to indicate their coefficient of variation (expressed as a percentage). The letter codes represent the following coefficients of variation:

Text table 1
Coefficients of variation

Rating	CV Range	Code
excellent	0.01 to 4.99	A
very good	5.00 to 9.99	B
good	10.00 to 14.99	C
acceptable	15.00 to 24.99	D
use with caution	25.00 to 34.99	E
too unreliable to be published	≥ 35.00	F

The variability in the estimate can be obtained by constructing confidence intervals around the estimate using the estimate and the coefficient of variation. Thus, for our sample, it is possible to state with a given level of confidence that the confidence interval constructed around the estimate will cover the expected value. For example, if an estimate of \$15,000,000 has a coefficient of variation of 10%, the standard error will be \$1,500,000 or the estimate multiplied by the coefficient of variation. It can then be stated that the interval whose length equals the standard deviation about the estimate, i.e., between \$13,500,000 and \$16,500,000, will cover the expected value over repeated surveys, 68% of the time. Or, it can be stated that the interval whose length equals two standard deviations about the estimate, i.e., between \$12,000,000 and \$18,000,000, will cover the expected value over repeated surveys, 95% of the time.

The c.v. is not always a good indicator of the precision for some variables. This is particularly true when the different values of a variable are positive and negative. In that case, the standard error of the estimate tends to be large and the estimate tends to be small or approaching zero, thus resulting in a high c.v. Therefore, the estimate might be near the exact population value and, at the same time, be rated as being unreliable. The variable net cash income is in that situation and therefore, its c.v. is not used. The estimates not accompanied by a data quality symbol are assessed to be “acceptable or better.”

Non- sampling error measures

The exact population value is aimed at or desired by both a sample survey as well as a census. We say the estimate is accurate if it is near this value. Although this value is desired, we cannot assume that the exact value of every unit in the population or sample can be obtained and processed without error. Any difference between the expected value and the exact population value is termed the bias. Systematic biases in the data cannot be measured by the probability measures of sampling error as previously described. The accuracy of a survey estimate is determined by the joint effect of sampling and non-sampling errors.

Note on farm type

Since the 2003 Farm Financial Survey (FFS), farm type has been based on the North American Industry Classification (NAICS). For further detail, please refer to the Whole Farm Database Reference Manual, Catalogue no. 21F0005G, “Table A.1 Farm type codes and titles based on NAICS structure and availability by data source”.

Note on farm counts

Note that some of the change in farm counts from year to year is due to revenue variability. Farms may be in scope one year and out of scope another year based on the \$10,000 threshold used to determine the population for the Farm Financial Survey.

Comparability of data and related sources

The comparability of FFS data with other Statistics Canada sources such as the Agricultural Economic Statistics series (AES), the Census of Agriculture, and the Taxation Data Program (TDP) of Agriculture Division, is affected by differences in concepts, target populations (e.g. exclusions) and methods. The compound effect of those differences can contribute to fairly significant variation, even in some trends. For example, assets, liabilities, revenues and expenses for the FFS are not directly comparable with the above sources. As a result of the residual method used to derive net income, small differences in revenues or expenses can result in large differences in net income level and yearly change.

Target population

The target population is not generally comparable to those of other data sources, as some inclusions and exclusions differ among the projects.

Two important exclusions have an impact on the FFS estimates: farms with less than \$10,000 in gross farm receipts and multi-holding operations. Some other inclusions and exclusions that differ among the projects also have important effects on the data. For example: exclusion of inter-farm sales (within a province) from AES receipts and expenses; exclusion of corporate operations with less than \$25,000 in gross receipts and less than 50% of receipts from agricultural activities from TDP (enterprise concept).

Methods

Some factors that may contribute to differences in estimates include data sources (e.g. administrative data, self enumerated information) and differing respondents (e.g. farm operators, tax filers). Also, reporting for FFS and TDP contain an unmeasured mix of cash and accrual accounting, as well as fiscal years that differ from the calendar year, while AES data is based on cash accounting and a fiscal year end of December 31.

Glossary

Capital investments. Purchase or acquisition of some farm related building, structure or item from which a benefit will be derived over a period of time. Included are purchases of land and buildings, land improvements, construction or major renovation of farmhouses, storage for manure, pesticide, chemical or fuel, and other buildings, environmental protection improvements, purchases of breeding and replacement livestock, quota, farm machinery and equipment and other farm assets. The value of the Goods and Services Tax (GST), Harmonized Sales Tax (HST), Provincial Sales Tax (PST) and Quebec Sales Tax (QST) is excluded from the values reported.

- **Land and buildings.** Included are the purchase of farmland, farmhouse and any other farm buildings.
- **Land improvements.** Included are expenditures to make land suitable for general agricultural use such as clearing of land, levelling, irrigation, drainage and orchard planting.
- **House construction or major renovation.** Included is the construction of a new farmhouse or any major renovations to the existing farmhouse.
- **Manure storage construction or major renovation.** Included is construction or any major renovations of concrete manure tanks and concrete-walled manure storage, including composting building and facilities.
- **Pesticide, chemical and fuel storage construction or major renovation.** Included is construction or any major renovations of buildings or facilities used only for storing pesticides or chemicals and tanks for storing fuel or gasoline.
- **Other building construction or major renovation.** Included is construction or any major renovations to barns, silos, sheds or garages.
- **Environmental protection improvements.** Included are shelterbelts, windbreaks, buffer strips or fences for waterways protection.
- **Breeding and replacement livestock.** Livestock purchased with the intention of being kept on the operation for breeding purposes and for more than one year. Included are bulls, cows, heifers for replacement, boars, sows, bred gilts, rams, ewes, replacement lambs and goats for milk or hair.
- **Quota.** An entitlement or right to sell or deliver a certain amount of an agricultural product, in particular, milk, eggs, poultry and tobacco. Depending on the product and the regulations prevailing in the province of sale, quotas may or may not be purchased separately from real estate. Only quota purchased separately from other assets are reported.
- **Farm machinery and equipment.** Included are the purchase of new or used farm cars and trucks, tractors, trailers, office equipment and equipment for feeding, tillage, seeding, harvesting, processing, etc. All values reported reflect the gross expenditure before trade-in, and include leased farm machinery and equipment since 2001.
- **Other farm assets.** Included are purchases of stocks, shares, bonds, Guaranteed Investment Certificates (GICs), mutual funds and any reinvested dividends. Excluded are contributions to RRSPs.

Capital sales. Included are monies received from the sale of capital items such as land and buildings, machinery and equipment (whether traded in or sold outright), quotas and breeding and replacement livestock. Only quota sold

separately from other assets are reported. The value of the GST, HST, PST and QST is excluded from the values reported.

- **Land and buildings.** Included is the sale of farmland, farmhouse and any other farm buildings.
- **Machinery and equipment traded-in.** Included is the value of farm machinery and equipment traded-in.
- **Machinery and equipment sold outright.** Included are receipts for machinery and equipment sold outright.
- **Quota.** As defined in Capital Investments above. Only quota sold separately from other assets is reported.
- **Breeding and replacement livestock.** Includes the value of breeding and replacement livestock sold. Excluded is the value of culls sold for slaughter. Sales of culls are recorded as livestock (beef or hog) income.
- **Other farm assets.** Included are sales of stocks, shares, bonds, Guaranteed Investment Certificates (GICs) and mutual funds. Excluded are withdrawals from RRSPs.

Current assets. Unrestricted cash and any other asset that, in the normal course of operations, is expected to be converted into cash or consumed in the production process within one year or within the normal operating cycle (where the cycle is longer than a year). Included are cash, savings, accounts receivable, supply inventories, market livestock and crops for sale. All items are valued at current market value.

- **Cash and short term investments.** Cash and short-term investments include cash and all investments purchased with farm profits due to mature within one year.
- **Accounts receivable.** An amount owed to the business usually arising from the sale of goods or services. Included are uncollected receipts for grain and livestock sales, custom work and program payments.
- **Crops for sale.** Includes the value of all harvested crops destined for market including greenhouse and nursery horticulture products.
- **Market livestock.** The value of livestock expected to be sold for slaughter: heifers for slaughter or feeding, steers, calves, pigs (excluding boars and sows), slaughter lambs, poultry, goats for meat and culls, etc.
- **Supplies on hand (inputs).** Included are the value of supplies on hand (feed, fertilizer, fuel, seed, pesticides, wood used to heat buildings) and other supplies used for farm businesses.
- **Other current farm assets.** Other current assets include prepaid expenses and the value of unsold livestock products (e.g. milk, eggs, pelts).

Current liabilities. The portion of debt whose repayment period is less than 12 months and which is outstanding as of December 31. Not included are annual or semi-annual payments on long-term liabilities that will be due within the current year.

Current market value. The most probable price an asset would bring in a competitive and open market under all conditions required for a fair sale.

Debt-to-equity ratio. The debt-to-equity ratio is an indicator of a business's capacity to repay its debts. It is calculated by dividing total liabilities by equity (net worth).

Expenses (operating). The business costs, generating a cash outlay, incurred by farm operators for goods and services used in the production of agricultural commodities. Capital investments, capital cost allowances (depreciation), and the value of inventory adjustments, are excluded from the operating expenses.

- **Interest expenses.** Included is interest on money borrowed to earn farming income. Examples are interest charges on real estate mortgages and loans to buy farm machinery and equipment. Excluded are payments made on the principal portion of liabilities.

- **Family wages from the farm.** Gross wages and salaries paid to the operator, their spouse and never married children residing in the same household. Wages and salaries earned by family members and operators off the farm are excluded, as are wages and salaries paid to hired help or paid to other operators and their families.
- **Other expenses.** Included are expenses associated with crop production (e.g. fertilizer, lime, pesticides, insurance, seed and plants) and production of livestock (e.g. livestock and poultry purchases, feed, supplements, insurance, veterinary fees, medicine). Also included are items such as wages and salaries paid to hired help and other operators' families, machinery, truck and auto expenses (fuel, repairs, licences, insurance, rental and leasing expenses), utilities, custom work, property taxes and insurance for farm buildings. See the questionnaire for a breakdown of available expense variables.

Farm type. The farm type classification is self-reported, mainly based on the percentage of the sales of the major commodity (or commodity groups). For purposes of statistical tabulations, ten major farm types have been selected and are identified as follows:

- **Grains and oilseeds.** Farms with gross agricultural revenue of more than 50% from the sales of wheat, oats, field peas, dry beans, lentils, mustard, flaxseed, rapeseed (canola), corn for grain, soybeans etc. and mixed grains.
- **Dairy cattle and milk production.** Farms on which more than 50% of the gross agricultural revenue (excluding dairy subsidies) is derived from the sale for milk and cream for both fluid and industrial milk purposes.
- **Hog and pig.** Farms with more than 50% of the gross agricultural revenue derived from the sale of hogs, weaners, market pigs, gilts, feeders, sows and boars, including the sales of cull hogs.
- **Beef cattle ranching and farming, including feedlots.** Farms with more than 50% of the gross agricultural revenue derived from the sale of cattle, including beef cattle finishing, cattle feedlot operations, cattle for slaughter, dairy heifer replacement stock and semen.
- **Poultry and egg.** Farms on which more than 50% of the gross agricultural revenue is derived from the sale of chickens, pullets, hens, cockerels, capons, commercial broilers, roasters or eggs. Also includes revenues from the sale of turkeys, geese, ducks and other fowl. Starting in 2002, hatcheries are included with this farm type – note that this information was not collected for hatcheries prior to 2002 for this survey. Poultry and Egg are published together, but separate estimates are available upon request.
- **Fruit and nut.** Farms deriving more than 50% of the gross agricultural revenue from the sale of fruits.
- **Other vegetable and melon.** Farms deriving more than 50% of the gross agricultural revenue from the sale of vegetables (excluding potatoes and greenhouse vegetables).
- **Potato.** Farms deriving more than 50% of the gross agricultural revenue from the sale of potatoes.
- **Greenhouse, nursery and floriculture.** Farms deriving more than 50% of the gross agricultural revenue from the sale greenhouse and nursery products, including vegetables, sod and flowers.
- **Other.** All farms not included in the classifications above are considered other farm types. Included are farms with revenues principally from the sale of other livestock and associated products (horses, ponies, furs, sheep and goats, bees and honey, bison, emus, llamas, aquaculture [fish], mixed livestock and other mixed operations). Included are revenues from the sale of other crops and associated products (hay, forages, small seeds, ginseng, sugar beets, tobacco, mushrooms, spice crops, bulbs, and forest and maple products). Also, includes revenues for agricultural custom work and agricultural rental income.

Income Stabilization Account Balances. From 1995 to 2007, the data represent the balance outstanding from all funds of the Net Income Stabilization Accounts (NISA). Beginning in 2009, the data represent the balance outstanding in the AgrilInvest account(s).

LAOS (Large Agricultural Operations Statistics): The universe of large agricultural operations statistics consists of two types of enterprises; large operations where the enterprise's agricultural activities fall under one operation and multi-operations where agricultural activities are divided among several farms. Multi-operations are excluded from the Farm Financial Survey. Large agricultural operations are considered large based on their gross agricultural revenue, which must be \$5 million or more per year in all provinces except Alberta where \$7 million in gross revenue is required. Multi-operations must have an annual gross farm revenue of \$2.5 million or more.

Long-term assets. An asset that has a useful life greater than one year. Such an asset, which can be either a tangible or intangible item, is usually not purchased for resale, but is to be used over time to produce saleable products. Included are land and buildings, machinery and equipment, quota and productive assets such as a breeding herd and investments. All items are valued at current market value.

- **Long-term investments.** Long-term investments of the operation include all money investments due to mature after December 31 of the reference year, such as bonds, shares, long-term Guaranteed Investment Certificates (GICs), mutual funds and co-operative shares.
- **Other long-term farm assets.** Includes off-farm site warehouses, grain condominiums and other buildings owned by operations, as well as nursery products such as trees and shrubs (other greenhouse and nursery horticulture products are included in current assets as inventory under crops for sale).

Long-term liabilities. That portion of a debt, with a maturity date beyond the current year or beyond the normal operating cycle (where the cycle is longer than a year), which is outstanding as of December 31.

Market sales. Revenues from the sale of agricultural commodities and services, excluding program payments.

Net cash farm income. Revenue (operating) minus expenses (operating), excluding capital cost allowances (depreciation); the value of inventory adjustments; the sale of land and buildings, machinery, equipment and quota; and capital investments. It represents the amount of money available for debt repayment, investment or withdrawal by the owner(s).

Net worth. The difference between the market value of the farms assets and the value of the liabilities.

Program payments and insurance proceeds include payments related to current agricultural production and paid directly to producers; included are payments from private and public insurance policies. However, it does not attempt to cover all payments made to farmers, nor does it represent total government expenditure under all assistance programs.

Examples of included programs are:

- AgriStability;
- AgriRecovery programs (e.g., B.C. Bovine tuberculosis, Alberta Seed Potato Assistance, Saskatchewan Farm & Ranch Water Infrastructure, etc);
- Cull Breeding Swine Program;
- Quebec's Assurance stabilisation des revenus agricoles (ASRA);
- Rebates (e.g., fuel tax, property tax, farm GST/HST, Young Farmer Rebate);
- private hail insurance;
- Business Risk Management (BRM);
- These payments may also include compensation received for crop damage due to wildlife or for leaving the farmland in its natural state for wildlife.

Revenue class. Predetermined levels of total operating revenues. These levels are:

\$10,000 to \$24,999

\$25,000 to \$49,999

\$50,000 to \$99,999

\$100,000 to \$249,999

\$250,000 to \$499,999

\$500,000 to \$999,999

\$1,000,000 and over

Revenues (operating). The revenues generated from the sale of agricultural commodities and services, as well as agricultural payments and subsidies.

- **Farm sales.** Included are revenues from sales of grains, oilseeds and specialty crops, dairy products, hogs, cattle, poultry, eggs, horticulture products, and other commodities and services as outlined in the description of farm types.
- **Program payments and insurance proceeds.** As defined above.

Total assets. Included are all "tangible and intangible items of value" as of December 31. It is the sum of current assets, breeding livestock, machinery and equipment, quota, land and buildings, and other financial investments.

Total liabilities. Include all obligations of a business arising from past transactions that are to be paid to various lenders in the future. These lenders include the federal government (Farm Credit Canada, Advance Payments Program), provincial governments, chartered banks, trust companies, treasury branches, *caisses populaires*, credit unions, machinery and supply companies and private individuals. Total liabilities are the sums of current and long-term liabilities.

Farm Financial Survey

TO THE RESPONDENT:

This questionnaire is to assist you in answering a telephone survey. **Please complete by June 27, 2010** and keep it by your telephone. An interviewer from Statistics Canada will telephone you **between the end of June and mid August** for this information.

DO NOT MAIL this questionnaire. Please retain for your personal records.

Use your records, if possible; otherwise, enter your best estimate.

All information will be kept confidential under the *Statistics Act*.

Statistics from this survey helped provide information to develop new programs such as AgrInvest.

Questions refer to the calendar year 2009.

If information is not kept on a calendar year basis, please report for your latest fiscal year end.

In all cases, record the year end for the financial information you provide →

CONFIDENTIAL when completed

Disponible en version française.

009					
	Day	Month	Year		

This survey is conducted under the authority of the *Statistics Act*, Revised Statutes of Canada, 1985, c. S-19. Completion of this questionnaire is a legal requirement under the *Statistics Act*.

	Corporation Name																								Area Code

CHARACTERISTICS OF THE OPERATOR/OPERATION

• Report questions 1 to 5 as of **December 31, 2009** or your **fiscal year end**

A **FARM OPERATOR** is an individual responsible for the day-to-day operation of the farm, who participates in the decisions to borrow money, to rent, buy or sell assets and to manage debts. An operation may have more than one operator, but only one questionnaire is to be completed for each operation.

1. How many operators 18 years of age and over were responsible for this operation?

051

2. What was the age of:

052

a) The oldest operator

053

b) The youngest operator (*minimum age of 18*)

054

3. How many years has the most experienced operator on this farm managed a farm business?

For the Farm Financial Survey, **FAMILY** is defined as an operator, that operator's spouse/partner and children **residing in the same household**. Children are included regardless of age or marital status as long as they do not have their own spouse or child living in the household.

FOR CORPORATIONS: report for **ONE** operator and **that operator's FAMILY**.

4. What is the legal operating arrangement of this operation? ("X" one circle only)

a) Sole Proprietorship 3

056

b) Corporation or Ltd. Co. 4 — What is your **FAMILY's** percent ownership of this operation?

062 %

c) Partnership 5 — What is your **FAMILY's** percent ownership of this operation?

063 %

d) Cooperative and communal operations (e.g., Hutterite colonies) 6 (GO TO PAGE 3)

e) Other (e.g., joint venture, trust) (please specify) 7

078

5. How many members are in the operator's **FAMILY**? (*For definition of Family, please see above*)

065

LAND USE

- Report for **December 31, 2009** or your **fiscal year end**
- Round to the nearest whole number

1. How will you report land area? 199 1 acres
 ("X" one circle only) \longrightarrow 2 hectares
 3 arpents (*Quebec only*)

2. For the **total land area** of this operation, as of **December 31, 2009** (including workable and non workable) how much was:

Total land area as of December 31, 2009	
	120
a) Owned	32
b) Rented or leased FROM others (with or without a written agreement) • Include shareholders , governments and other sources	+ 103
c) Rented or leased TO others (with or without a written agreement)	-
d) Total land (a + b - c)	= 195

CROPLAND

CROPLAND includes tame hay, field crops, tree fruits or nuts, berries or grapes, vegetables, seed, sod, greenhouse or nursery products, mushrooms and Christmas trees.

3. Did you have any cropland owned **OR** rented **FROM** others?
 • **Exclude** cropland rented **TO OTHERS**

122 YES NO \longrightarrow (GO TO PAGE 4)

Total Cropland
194

4. Of the total land (Box 195 above), how much was **cropland**?

Price per Acre (hectare/arpent)	
133	Dollars
	.00

5. What was the market value of an acre (hectare/arpent) of your **cropland** excluding **buildings** in 2009?

6. Did you rent any **cropland FROM** others?

123 YES NO \longrightarrow (GO TO PAGE 4)

7. Did you pay cash for the **cropland** rented **FROM** others?

134 YES NO \longrightarrow (GO TO PAGE 4)

Price per Acre (hectare/arpent)	
135	Dollars
	.00

8. What was the **average** rental price per acre (hectare/arpent), **excluding buildings**, in 2009?

LIVESTOCK AND POULTRY

1. Did the operation custom or contract feed any livestock or poultry **FOR OTHERS** in 2009?

- **Exclude** all animals OWNED by your operation

676 YES

NO → (GO TO QUESTION 2 BELOW)

(Please specify type(s) and total number(s) of livestock and poultry custom or contract fed in 2009)

Type(s)	Total Number
	677

2. Did the operation **OWN** any livestock or poultry on **December 31, 2009**?

- **Include** all animals OWNED by this operation whether they are on your land or on land **not** owned by you

170 YES

NO → (GO TO PAGE 5)

How many of the following did this operation own on **December 31, 2009**?

PART I. CATTLE

- a) Bulls, 1 year and over
- b) Cows mainly for dairy
 - **Include** dairy replacement heifers one year and over
- c) Cows mainly for beef
 - **Include** beef replacement heifers one year and over
- d) Steers and Heifers, 1 year and over for slaughter or feeding
- e) Calves, under 1 year

Total Number on December 31, 2009
674
172
173
174
175

PART II. PIGS

- f) Boars, 6 months and over
- g) Sows for breeding and bred gilts
- h) All other pigs

675
179
176

PART III. POULTRY

- i) Layers
- j) Broilers
- k) Other poultry (e.g., breeders, turkeys, pullets, etc.)
(please specify) **080** _____

188
189
198

PART IV. SHEEP AND LAMBS

- l) Sheep and lambs

182

PART V. HORSES

- m) Horses and ponies

187

PART VI. OTHER LIVESTOCK

- n) Other livestock (please specify) **081** _____

184

CAPITAL INVESTMENTS

- **Exclude** GST, HST, PST, Quebec Sales Tax
- Report to the nearest \$1,000
- Report for **2009** or your **fiscal year**

1. During **2009**, did this operation invest any money in capital items or improvements?

200 YES 1

NO 3 (GO TO PAGE 6)

2. What was the amount of capital invested in **2009** for the following:

- a) Farm real estate purchased
- b) House construction or **major** renovation
- c) Manure storage construction or **major** renovation
- d) Pesticide, chemical or fuel storage construction or **major** renovation
- e) Other building construction or **major** renovation (e.g., barns, storage sheds, machine sheds, etc.)
- f) Environmental protection improvements: shelterbelts, windbreaks, buffer strips or fences for waterways protection
- g) Other land improvements: irrigation, orchard planting, draining, clearing of land, fences for purposes other than environmental protection
- h) Breeding and replacement livestock intended to be on the farm for more than 1 year
 - **Exclude** poultry
- i) Quota purchased separately from other assets
- j) Farm machinery and equipment **purchased or leased** in **2009**
 - Report the full purchase or lease price **BEFORE** trade-in or downpayment. **DO NOT REPORT MONTHLY PAYMENT.**
 - Specify using list of machinery and equipment below

Capital Investments in 2009

- k) Other farm assets purchased (e.g., stocks, bonds, GICs, mutual funds)
 - **Exclude** RRSPs (to be reported in Box 694, page 13)

(please specify)

217	000
------------	-----

3. How much money did you **receive in 2009** as a government grant for **environmental protection purposes** to reduce the cost of any of these capital investments?

222	000
------------	-----

FARM ASSETS

1. What was the value of the following farm assets of this operation on **December 31, 2009** or your **fiscal year end**?
- Report to the nearest \$1,000
 - **Report at CURRENT MARKET VALUE**
 - **Exclude** assets not from this operation (*these assets to be reported in Box 694, page 13, Question 2*)

LIVESTOCK AND POULTRY ASSETS

- a) Breeding, replacement and other livestock not considered market livestock
 • **Include** all livestock and fur animals for breeding or replacement purposes (e.g., bulls, cows, boars, sows, ewes, honey bees, bison, llamas, ostriches, race and riding horses, etc.)
- b) Market livestock and poultry
 • **Include** heifers for slaughter or feeding, steers, calves, pigs, slaughter lambs, all poultry, goats for meat, culls, etc.
 • **Exclude** contract livestock and breeding and replacement livestock

December 31, 2009	
Livestock and Poultry Assets	
662	000
308	000

SHORT-TERM FARM ASSETS (LESS THAN ONE YEAR)

- c) Accounts Receivable: how much money **was still owed to** this operation on **December 31, 2009** for crops or livestock previously sold, custom work, etc.?
 • **Include** deferred grain tickets
- d) Inventory
- i) Supplies on hand (inputs) such as feed, fertilizer, fuel, seed, chemicals, etc.
- ii) Crops for sale
 • **Include** all harvested and stored crops, hay, etc.
- e) Cash and short-term investments of this operation (less than one year)
- f) Other short-term farm assets such as prepaid expenses for feed, fertilizer, seed, chemicals, etc.

(please specify) 094 _____

Short-term Assets

306	000
661	000
658	000
659	000
	000

LONG-TERM FARM ASSETS

- g) **Current market value** of all farmland and buildings owned
 • **Include** all farmland owned, the farmhouse, storage sheds, silos, barns, grain bins, machine shops and woodlots
 • **Exclude** leased farmland and buildings
 • **Exclude** quota value
- h) All machinery and equipment owned (**market value**)
 • **Include** cars and trucks used for the farm business, tractors, cultivators, combines, movable irrigation equipment, small tools, computers and office equipment, etc.
 • **Exclude** leased machinery
- i) Quota (**market value**)
- j) Long-term investments of this operation (one year or more) (e.g., stocks, bonds, long-term GICs, mutual funds, cooperative shares, etc.)
- k) Other long-term farm assets (e.g., off-farm site warehouses, grain condominiums and other buildings owned by this operation, etc.)
 • **Exclude** RRSPs (*to be reported in Box 694, page 13*)

(please specify) 084 _____

	000

General information

Confidentiality

Your answers are confidential.

Statistics Canada is prohibited by law from releasing any information it collects which could identify any person, business, or organization, unless consent has been given by the respondent or as permitted by the *Statistics Act*. The confidentiality provisions of the *Statistics Act* are not affected by either the *Access to Information Act* or any other legislation. Therefore, for example, the Canada Revenue Agency cannot access identifiable survey records from Statistics Canada.

Information from this survey will be used for statistical purposes only and will be published in aggregate form only.

Record linkages

To enhance the data from this survey, Statistics Canada may combine it with information from other surveys from administrative sources.

Data-sharing agreements

To avoid duplication of enquiry, Statistics Canada has entered into data-sharing agreements with provincial statistical agencies, which must keep the data confidential and use them only for statistical purposes. Statistics Canada will only share data from this survey with those organizations that have demonstrated a requirement to use the data.

Section 11 of the *Statistics Act* provides for the sharing of information with provincial statistical agencies that meet certain conditions. These agencies must have the legislative authority to collect the same information, on a mandatory basis, and the legislation must provide substantially the same provisions for confidentiality and penalties for disclosure of confidential information as the *Statistics Act*. Because these agencies have the legal authority to compel businesses to provide the same information, consent is not requested and farm operations may not object to the sharing of their data.

For this survey, there are **Section 11** agreements with the provincial statistical agencies of Newfoundland and Labrador, Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia.

The shared data will be limited to information pertaining to farm operations located within the jurisdiction of the respective province.

Section 12 of the *Statistics Act* provides for the sharing of information with federal and provincial government organizations. Under Section 12, you may refuse to share your information with any of these organizations by writing a letter of objection to the Chief Statistician at the address below. Please specify the name of the survey and the organizations with which you do not want to share your data.

Statistics Canada
Chief Statistician
R. H. Coats Building, 26th floor, Section A
100 Tunney's Pasture Driveway
Ottawa, Ontario K1A 0J6

For this survey, there are **Section 12** agreements with the Prince Edward Island statistical agency and Agriculture and Agri-Food Canada.

For the agreement with the Prince Edward Island statistical agency, the shared data will be limited to information pertaining to farm operations within the jurisdiction of this province.
