#### Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

# **User information**

#### **Symbols**

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
  - p preliminary
  - r revised
- x suppressed to meet the confidentiality requirements of the Statistics Act
- E use with caution
- F too unreliable to be published
- \* significantly different from reference category (p < 0.05)

#### **Acknowledgements**

This publication was prepared by the Transportation Division under the general direction of **Fred Barzyk**, Director, **Augustine Akuoko-Asibey**, Chief, Multimodal Transport Section and **Gregory Maloney**, Unit Head, Multimodal Transport Section.

Consolata Zito, the Senior Analyst, was the principal author of the text. Technical assistance was provided by Diane Lacasse.

Statistics Canada would like to thank all of the respondents and data suppliers whose participation has enabled us to provide the statistical information contained in this publication.

## **Foreword**

"Rail in Canada, 2009" provides information on the size and structure of the Canadian rail transport industry. It contains a number of financial, operating and commodity origin and destination statistical tables.

The statistical tables in the publication are created from two annual surveys – the Annual Rail Survey and the Rail Commodity Origin and Destination Survey. As the objectives, coverage and methodologies of these surveys are not identical, information on each of these elements can be found in the section of this publication entitled 'Data Quality, Concepts and Methodology —Data quality, concepts and methodology — Survey methodology, coverage and data limitations.

#### **Attention Users!**

The following changes in the coverage, data and format apply to this and prior publications:

- The derivation of certain variables related to income, assets and liabilities has changed as of reference year 2009. As a result, caution should be used in comparing their year-over-year changes. The specific variables affected are indicated and discussed throughout the publication.
- Data published prior to 1997 conform to industry group 453 (Railway Transport and Related Service Industries). This grouping was part of the Standard Industrial Classification System (SIC), 1980, which was replaced by The North American Industrial Classification System (NAICS), to allow for comparability with the United States and Mexico. Please refer to the section entitled 'Data Quality, Concepts and Methodology —Data quality, concepts and methodology — Survey concepts and data limitations for more detail.
- Statistics Canada is required by law to protect the confidentiality of the data supplied by survey respondents. However, for decades, railway operations were regulated through governmental approval of shipping rates. Hence, railway statistics were published in detail by carrier and by province/territory. Since deregulation in 1996, the railways can negotiate confidential contracts with shippers. To preserve confidentiality, data on commodity movements are presented by region. Mainline railways have granted permission to Statistics Canada in writing to report their financial and operating statistics as they appear in this publication.
- The database containing data on financial and operational statistics from past annual reports from rail carriers operating in Canada underwent a major historical revision in March 2007. This major revision was carried out in order to ensure that industry data from 1986 to 1997, previously classified under the SIC 1980, would be directly comparable with all future industry data following the adoption of the NAICS by Statistics Canada in 1997. As a result of this revision, data from 1986 to 1997 can now be found on CANSIM.
- The analytical portion of this publication provides text tables containing key variables for years 2005 to 2009.
- In 2009, the survey universe was composed of 3 mainline carriers Canadian National (CN), Canadian Pacific (CP) and VIA Rail, and 37 regional and short-haul carriers.
- Financial, operational and origin and destination data may change on a year-to-year basis as a result of fluctuations in currency exchange rates, reclassifications of accounts, etc. The data may also be influenced by mergers, acquisitions and companies which may enter or exit the industry.

I Glossary

79

# **Highlights**

- The Canadian railway industry saw its operating revenues drop 14.4% to \$9.4 billion in 2009 compared with 2008.
- Total operating expenses, for its part, decreased 9.8% compared to the previous year to \$7.8 billion.
- The combined effect of the changes in revenues and expenses resulted in a net operating income of \$1.6 billion in 2009, a decrease of 31.3% from the previous year.
- Total assets of the railways were \$20.4 billion in 2009. CN held 55.8% of the industry's total assets with \$11.4 billion, while CP held 33.5% with \$6.9 billion and VIA Rail held 4.8% with \$986.2 million. Regional and short-haul carriers held the remaining 5.8% with \$1.2 billion.
- Rail carriers consumed 1.8 billion litres of diesel fuel in 2009 and spent \$1.1 billion acquiring the fuel.
- Total employment in the rail industry was a little less than 34,700 in 2009, a decrease of 8.0% from 2008 levels, while the average annual compensation per employee rose 1.1% in 2009 to approximately \$74,500. Combined, these factors pushed overall compensation down 7.0% to \$2.4 billion.
- The total tonnage of revenue freight carried decreased 15.7% from 2008 to 278.3 million tonnes in 2009. Similarly, tonne-kilometres fell 11.9% to 299.6 billion tonne-kilometres.
- The total number of passengers carried by rail in 2009 decreased 8.0% from 2008 to 4.4 million. The total number of passenger-kilometres also decreased in 2009, falling 10.2% to 1.4 billion.
- The commodity with the largest volume transported in 2009 was coal at 29.9 million tonnes.

# Overview of rail transport in 2009

#### **Economy in brief**

The Canadian economy started 2009 in much the same way it ended 2008. Beginning in the third quarter of 2008 and continuing into the second quarter of 2009, Canada experienced a recession that impacted a wide array of economic activities ranging from gross domestic product to exports to job creation.

For the year as a whole, real gross domestic product dropped 2.6%,<sup>1</sup> merchandise exports fell 24.6%,<sup>2</sup> and the creation of jobs decreased 1.6%<sup>3</sup> to just over 202,000 jobs.

2009 was further characterized by changes in commodity prices and the rate of inflation. Commodity prices declined 35.5%, a slight deceleration from the decline felt in the recessionary period, while the rate of inflation, as measured by the consumer price index, averaged 0.3% - the smallest inflationary increase since 1994 when the index rose by 0.1%.

#### **Industry Performance**

The Canadian railway industry's performance in 2009 essentially mirrored that of the Canadian economy as the industry experienced a financial downturn for the year due to the global economic recession.

### Operating revenues

Overall, total operating revenues for the Canadian railway industry fell 14.4% from 2008 to \$9.4 billion in 2009. The decline was primarily due to decreased freight transportation revenue. Over the five year period from 2005 to 2009, total operating revenue dropped 4.2% (see text table 1).

#### Operating revenues by source

Freight transportation revenue, which accounted for 88.7% of the industry's total operating revenues in 2009, declined 15.5% to 8.3 billion from 2008. The decline in freight revenues was mainly tied to lower freight volumes in almost all markets and a reduction of fuel surcharges as a result of decreases in fuel prices and fuel consumption. The reduction in freight revenues was, however, partly offset by freight rate increases and the weaker Canadian dollar in 2009.

Revenues stemming from passenger transportation services and government payments also represent key income sources for the industry. In 2009, passenger transportation revenue decreased to \$271.1 million, a 10.8% drop from the year previous. The drop in passenger revenues in 2009 represents a 4.2% decrease in revenue over the 2005 to 2009 period.

Text table 1 Distribution of operating revenues by major sources, 2005 to 2009

Year			Operating rev	enues		
	Freight transportation	Passenger transportation	Services to VIA	Government <sup>1</sup> payments	Other	Total
			thousands of	dollars		
2009 2008 2007 2006 2005	8,347,368 9,880,164 9,435,676 9,343,789 8,759,673	271,099 304,066 291,783 294,529 282,881	66,676 67,166 67,748 67,774 64,915	374,704 362,868 349,932 309,868 308,304	349,656 381,174 375,945 381,131 406,946	9,409,503 10,995,438 10,521,084 10,397,092 9,822,719

<sup>1.</sup> The derivation of this variable has changed as of reference year 2009 with branch line payments being removed from government payments. As a result, caution should be used in comparing year-over-year changes.

Revenues stemming from government payments reached \$374.7 million in 2009.

#### Operating revenues by carrier

In 2009, operating revenues for Canadian National Railway (CN) fell 12.1% from 2008 to \$5.0 billion. Freight revenues, which accounted for 93.8% of all revenues earned, fell 12.0% to \$4.7 billion. This drop was mainly due to lower freight volumes in almost all commodities loaded and a reduction in fuel surcharges as a result of decreases in fuel prices and consumption.

Canadian Pacific Railway (CP) reported \$3.4 billion in operating revenues, a drop of 19.2% over 2008 levels. Similar to CN, freight revenues represented the majority of all revenues earned, at 95.6%. For 2009, freight revenues decreased 20.1% to \$3.2 billion. This decline was primarily the result of lower traffic volumes due to the global recession, decreasing fuel prices, and a drop in both the freight rates and the average length of haul of coal exports. The weakened Canadian dollar and net increases in freight rates for all lines of business other than coal partially offset the decline in revenues in 2009.

In contrast to both CN and CP, operating revenues for VIA Rail are derived primarily from two revenue sources – government payments and passenger transportation. Revenues from government payments and those reported for passenger transportation represented 46.9% and 52.0%, respectively, of the total operating revenues of VIA. In 2009, passenger revenues fell 11.5% from the 2008 level. The drop was mainly attributed to a decline in ridership due to lower demand for passenger services and a competitive pricing environment from other carriers who faced similar ridership declines.<sup>6</sup> A reduction in costs such as compensation, fuel and on-board products did, however, help to mitigate the effects of the revenue shortfalls. The combined impact of changes to government payments and passenger transportation resulted in a 4.1% drop in operating revenues from 2008 to \$482.1 million in 2009.

The regional and short-haul carriers combined for the remaining 5.8% of the total revenues for the industry. For the year, their operating revenues dropped 12.3% from 2008 to \$545.9 million. The decrease was mainly due to a combination of acquisitions of regional and short-haul carriers by mainline carriers and the global economic recession.

#### Operating expenses

Total operating expenses of the Canadian railway industry reached \$7.8 billion in 2009 (see text table 2). Both CN and CP each reported \$3.4 billion in operating expenses while VIA Rail registered \$509.6 million. CN and CP combined for 86.9% of the industry's operating expenses, while regional and short-haul carriers accounted for 6.6% and VIA Rail represented 6.5%.

<sup>6.</sup> VIA Rail Canada, Annual Report 2009, page 31.

In terms of the distribution of the types of operating expenses within the railway industry in 2009, rail operations expenses were the largest. For the year, these expenses (which include the operation of trains, yard stations, terminals, etc.) fell 27.4% from 2008 to \$3.1 billion, with all of the railways recording decreases. Of this total, mainline carriers accounted for 94.2% of the expenses.

Text table 2
Distribution of operating expenses by major category, 2005 to 2009

Year		Ope	rating expenses		
	Ways and structures <sup>1</sup>	Equipment <sup>1</sup>	Rail operations	General <sup>1</sup>	Total
		thou	sands of dollars		
2009 2008 2007 2006 2005	1,494,199 1,592,470 1,459,704 1,340,936 1,311,510	1,395,412 1,441,127 1,507,953 1,466,059 1,440,876	3,062,354 4,215,936 3,622,544 3,386,015 3,217,842	1,830,749 1,379,014 1,399,156 1,595,206 1,537,211	7,782,714 8,628,547 7,989,357 7,788,216 7,507,439

<sup>1.</sup> The derivation of this variable has changed as of reference year 2009. An account related to roadway amortization was removed from ways and structures expenses, accounts related to roadway machinery and equipment maintenance were removed from equipment expenses, and an account associated with compensation cost was added to general expenses. As a result, caution should be used when comparing year-over-year changes.

General expenses, which include employee benefits and taxes (other than taxes on income), represented the second largest type of expenses within the industry in 2009. For the year, general expenses were \$1.8 billion.

Expenses related to ways and structures and equipment represented the third and fourth largest expense categories, respectively. For 2009, ways and structures expenses, (which include maintenance and depreciation of tracks, roadways, buildings, signals, communication and power, and terminals and fuel stations) were \$1.5 billion. Equipment expenses, for their part, were \$1.4 billion.

#### **Net Income**

The combined effect of the changes in operating revenues and expenses in 2009 resulted in net operating income decreasing 31.3% over 2008 levels to \$1.6 billion. Net income, after adjusting for taxes and extraordinary items, reached \$2.2 billion, a growth of more than three times the 2008 level.<sup>7</sup>

#### **Balance sheet and property accounts**

Total assets of Canadian railways were \$20.5 billion in 2009 (see text table 3). For mainline carriers, CN held 55.8% of the industry's total assets, followed by CP at 33.5% and VIA Rail at 4.4%. The regional and short-haul carriers held the remaining 5.8% of the industry's total assets.

<sup>7.</sup> The large growth in net income for the industry stems from changes made to CN's net income in both 2008 and 2009. In 2008, CN reported \$-1.5 billion in 'Other income and charges', while reporting \$688.0 million in 2009.

Text table 3
Total assets by carrier, 2005 to 2009

Year	Canadian National	Canadian Pacific	VIA Rail	Regional carriers 1	Total
		thous	ands of dollars		
2009 2008 2007 2006 2005	11,416,760 11,162,204 10,136,293 9,933,298 9,386,776	6,864,010 8,158,191 7,663,918 7,469,942 7,088,182	986,176 932,340 885,634 872,484 894,660	1,192,279 1,189,136 1,193,281 1,264,281 1,301,860	20,459,225 21,441,871 19,879,126 19,540,005 18,671,478

<sup>1.</sup> In this table, the expression regional carrier includes short-haul carrier.

Note(s): As of reference year 2009, total assets includes two new fields. These include future income taxes (current) under total current assets, and future income taxes (non-current) under total non-current assets. As a result, caution should be used in comparing year-over-year changes.

All year-end balances of property accounts showed increases in 2009 (see text table 4). The year-end balance of land showed the largest growth rate over 2008 levels with an increase of 6.6% to \$576.4 million. The balances for ways and structures and equipment grew to \$18.6 billion and \$7.7 billion, respectively.

CN held 56.0% of all accounts related to ways and structures in 2009, while CP comprised 35.4%. VIA Rail and the remaining regional and short-haul carriers accounted for 2.7% and 5.9% of these accounts, respectively. CN also held the largest industry share of accounts related to equipment in 2009 at 45.3%, with CP following at 40.7%.

Text table 4
Property accounts, totals, balance at the end of the year<sup>1</sup>, 2005 to 2009

Year	Land	Ways and structures <sup>2</sup>	Equipment
	thousands of dollars		
2009 2008 2007 2006 2005	576,397 540,943 524,693 465,258 448,945	18,550,655 18,456,072 17,900,431 17,627,051 17,127,289	7,675,301 7,606,386 7,629,314 7,830,439 7,560,426

<sup>1.</sup> Do not include "accumulated amortization" or "net book value".

At year end, the balance of the main property accounts (including land) totalled \$26.8 billion.

#### **Financial Ratios**

In 2009, the operating ratio<sup>8</sup> for the industry was 0.83. This signifies that the industry incurred a moderate operating profit and that a future decline in revenue may not impede its ability to maintain profitability.

Two alternative measures used within the industry to examine solvency are the debt-equity ratio<sup>9</sup> and the debt-asset ratio.<sup>10</sup> For 2009, the debt-equity ratio and the debt-asset ratio were 0.57 and 0.36, respectively. As these ratios were both under 1, it signifies that the rail industry financed its assets mostly through equity as opposed to using debt instruments.

<sup>2.</sup> The derivation of this variable has changed as of reference year 2009 as accounts associated with other roadway expenditures and amortization were removed from the ways and structures property accounts. As a result, caution should be used in comparing year-over-year changes.

<sup>8.</sup> The operating ratio is the proportion of total operating revenues absorbed by total operating expenses.

<sup>9.</sup> The debt-equity ratio is a measure of solvency calculated by dividing total liabilities by owner's equity.

<sup>10.</sup> The debt-asset ratio is a measure of solvency calculated by dividing total liabilities by total assets.

Text table 5 Financial ratios, 2005 to 2009

Year	Operating	Debt-asset	Debt-equity
	ratio	ratio	ratio
2009 <sup>1</sup>	0.83	0.36	0.57
2008	0.78	0.36	0.55
2007	0.76	0.38	0.60
2006	0.75	0.40	0.68
2005	0.76	0.40	0.67

<sup>1.</sup> Changes to the derivations of total operating revenues, total operating expenses, total assets and total liabilities as of reference year 2009 directly affect the operating, debt-asset and debt-equity ratio calculations. As a result, caution should be used in comparing year-over-year changes.

#### Inventory of equipment in service

At the end of 2009, there were a total of 2,866 locomotives in service – a decline of 0.7% from the 2,885 in service in 2008 (see text table 6). Out of those in service in 2009, 2,307 were engaged in freight service, 89 in passenger service, 442 in yard work and the remaining 28 classified as associated equipment.

Text table 6 Inventory of equipment in service, 2005 to 2009

Year	Locomotives	Freight cars	Passenger cars
		units	
2009 2008 2007 2006 2005	2,866 2,885 2,998 3,001 3,013	73,111 81,223 90,733 98,094 100,675	608 593 614 604 595

The number of freight cars in service for 2009 totalled 73,111. The composition of these cars involved hopper cars (41.2%), box cars (20.9%) and flat cars (20.6%). Over the 5 year period from 2005 to 2009, the number of freight cars decreased by 27.4%.

In 2009, CN owned 45.1% of all locomotives used for freight in the industry and 55.2% of all freight cars. CP, for its part, owned 41.6% of all locomotives used for freight and 37.4% of all freight cars. From a passenger perspective, VIA Rail owned 85.4% of all locomotives used for passenger service and 75.3% of all passenger cars.

#### Length of track operated

The total length of track operated by rail carriers decreased to 68,092 kilometres in 2009 – a decline of 3.0% compared to the previous year. Of this total, 54,842 kilometres of track were owned while the remaining 13,250 kilometres were operated under lease, contract or trackage rights, or were jointly owned (see text table 7). Together, CN and CP accounted for 84.6% of the total length of track operated (owned and leased) in 2009. (For detailed data related to length of tracks, see tables 4 and 5 in the Statistical Tables Section.)

Text table 7 Length of track operated, 2005 to 2009

	Total line owned	Total line operated under lease, contract, trackage rights or jointly owned	Total track operated
_		kilometres	
2009 2008 2007 2006 2005	54,842 56,989 57,646 57,349 57,884	13,250 13,240 14,069 14,463 14,483	68,092 70,230 71,716 71,812 72,367

#### **Fuel consumption**

Rail carriers consumed 1.8 billion litres of diesel fuel in 2009, and spent \$1.1 billion acquiring the fuel (see text table 8). For the year, fuel consumption decreased 14.8% from 2008 as did the cost by 42.9%. The prices per litre of fuel were also quite favourable to the industry in 2009 with prices being below 100.0 cents, with a high of 97.5 cents in November. 11 Overall, the average price per litre of fuel was 89.6 cents, a 28.4% drop compared to the average price per litre of 125.1 cents in 2008.

Text table 8 Fuel consumption and cost, 2005 to 2009

	Total diesel	Total cost of diesel fuel
	thousands of litres	thousands of dollars
2009 2008 2007 2006 2005	1,770,060 2,078,060 2,193,684 2,119,082 2,130,224	1,125,713 1,973,052 1,486,001 1,299,572 1,153,591

The drop in both fuel consumption and the average price of fuel in 2009 reflects a decrease in freight transportation activities, which fell 13.2% from 2008, and the movement of commodities on a tonne-kilometres basis, which fell 11.9%. (For more details, see origin and destination tables in the Statistical Tables Section and text table 9).

CN accounted for 51.5% of the total fuel consumption for the industry in 2009. CP accounted for 40.8%, while VIA Rail and the regional and short-haul carriers accounted for the remaining 7.7%. At the provincial level, Ontario had the highest consumption of diesel fuel for rail activity in Canada with 518.7 million litres consumed, down 20.3% from 2008 levels. (For data on the remaining provinces, see table 7 in the Statistical Tables Section.)

### Operating statistics – Freight transportation

In 2009, the total tonnage of revenue freight carried was 278.3 million tonnes – a decrease of 15.7% from 2008 (see text table 9). Over the five year period from 2005 to 2009, total tonnage decreased by 24.8%. Tonne-kilometres also declined in 2009, falling 11.9% to 299.6 billion tonne-kilometres.

<sup>11.</sup> http://www2.nrcan.gc.ca/eneene/sources/pripri/prices\_bycity\_e.cfm?PriceYear=2009&ProductID=5&LocationID=66,8,39,17#PriceGraph.

Text table 9 Operating statistics for freight transportation, 2005 to 2009

Year	Tonnes <sup>1</sup>	Tonne-km	Train-km	Car-km	Cars per train
		thousands			average number
2009 2008 2007	278,312 330,067 356,351	299,646,142 340,092,008 358.831,712	95,684 115,494 120.014	8,334,098 9,491,068 9,717,117	87.1 82.2 81.0
2007 2006 2005	357,197 369,943	352,477,289 352,139,700	123,198 123,892	9,717,117 9,761,158 9,826,045	79.2 79.3

Represent all freight moved in trains operated by carriers. The data on origin and destination of commodities are derived from local, forwarded, received and bridged transportation.

CN accounted for 43.9% of the total tonnage of all revenue freight carried and 57.1% of all tonne-kilometres recorded in 2009. For CP, revenue freight carried represented 33.8% of all tonnage for the industry while its tonne-kilometres represented 39.3%.

The number of train-kilometres fell 17.2% in 2009 compared to 2008 levels. Car-kilometres followed a similar path showing a decline of 12.2% over the previous year. Over the five year period from 2005 to 2009, train-kilometres decreased by 22.8% as did car-kilometres by 15.2%.

From a haulage perspective, the average haul increased 4.6% in 2009 to slightly above a thousand kilometres (see Statistical Table 9). Over the 5 year period from 2005 to 2009, the average haul increased by 13.1%.

Finally, the average number of cars per train increased in 2009, rising to approximately 87 cars. This amount is 9.8% higher than the 79 cars on average moved by trains in 2005.

#### Operating statistics – Passenger transportation

The total number of passengers carried by rail in 2009 decreased 8.0% from 2008 to 4.4 million - the first decline in ridership since 2006 (see text table 10). The drop was influenced by the global economic recession, which lowered travel and tourism demand throughout the year for VIA Rail and the passenger transportation industry as a whole.

Text table 10 Operating statistics for passenger transportation, 2005 to 2009

Year	Passengers	Passenger-km	Train-km	Car-km	Cars per train 1
		thousands			average number
2009	4,373	1,413,352	11,349	75,673	6.7
2008	4,753	1,574,293	11,897	80,817	6.8
2007	4,336	1,453,005	11,771	78,457	6.7
2006	4,243	1,450,481	11,503	80,168	7.0
2005	4,269	1,478,454	11,792	81,572	6.9

<sup>1.</sup> Includes freight cars.

The total number of passenger-kilometres also fell in 2009 as did the average passenger journey per ticket. For the year, passenger-kilometres fell 10.2% to 1.4 billion while the average passenger journey per ticket dropped to 323 kilometres - a 2.4% decrease from the 331 kilometres traveled per ticket in 2008.

Train-kilometres and car-kilometres followed similar paths in 2009 with decreases of 4.6% and 6.4%, respectively, from 2008 levels. As well, the average number of passenger cars per train fell 1.5% in 2009. Over the 2005 to 2009 period, the average number of cars per train has remained at or around 7 cars per year.

#### **Employment and compensation**

Employment in the Canadian rail industry fell to 31,688 employees in 2009, a decrease of 8.0% over the previous year. This employment level is 9.4% lower than the recorded level of 34,995 in 2005.

In 2009, CN continued to have the largest number of employees with 14,484. CP followed closely behind with 11,310 employees, while VIA Rail and the regional and short haul carriers had 3,125 and 2,769 employees, respectively.

Text table 11 Statistics on employment and compensation, 2005 to 2009

Year	Number of employees	Compensation	Average annual compensation	Average hourly compensation
		thousands of dollars	dollars	
2009 2008 2007 2006 2005	31,688 34,425 34,281 34,062 34,995	2,361,629 2,538,311 2,468,817 2,433,713 2,473,765	74,527 73,735 72,017 71,449 70,689	33.9 32.4 32.0 28.4 27.9

Total compensation received by employees in the rail industry for 2009 was \$2.4 billion. This represented a drop of 7.0% compared to 2008. On its own, CN paid almost half (48.5%) of the industry's total compensation.

The total average annual compensation per employee in 2009 was \$74,527, a 1.1% increase from 2008. Employees from general services had the highest average annual salary at \$90,043, followed by employees from transportation services at \$79,376. Employees from road maintenance and equipment maintenance, for their part, received average salaries of \$63,904 and \$63,274, respectively.

The average hourly salary for all employees in the rail industry in 2009 was \$33.90, an increase of \$1.50 compared to what employees received in 2008. The highest average hourly salary within the industry was held by the general services group at \$43.20, itself an increase of \$3.30 from the \$39.90 the group received in 2008.

#### Commodity origin and destination

Statistics on the origin and destination of commodities are based on CN and CP data and data on the traffic of regional and short-haul carriers. For further details, see the section entitled Data quality, concepts and methodology — Survey methodology, coverage and data limitations at the end of this publication.

The terms "origin" and "destination" used in this publication refer to origins and destinations of railway transport and not necessarily to the true origin or final destination of commodities. Some commodities may enter or leave Canada by marine, surface or air transport and be transferred to or from rail. The transfer points are the origins or destinations referred to in this publication.

Text table 12
Tonnage of top ten commodities, all origins and destinations, 2008 and 2009

Commodity	2008	2009	2009/2008 change
	tonnes		percent
26 Coal	34,508,536	29,874,875	-13.4
63 Mixed loads or unidentified freight	25,926,192	22,224,278	-14.3
01 Wheat	18,564,197	22,124,215	19.2
20 Iron ores and concentrates	19,942,859	21,954,804	10.1
05 Colza seeds (canola)	6,909,005	8,354,166	20.9
34 Other basic chemicals	9,356,776	8,131,266	-13.1
43 Wood pulp	8,845,765	7,640,835	-13.6
41 Lumber	9,656,050	7,189,808	-25.5
35 Potash	16,553,396	6,839,159	-58.7
02 Other cereal grains	7,710,614	5,849,546	-24.1
Total of the top ten commodities	157,973,390	140,182,952	-11.3
Other commodities	112,513,314	94,616,111	-15.9
Total tonnage of all rail commodities	270,486,704	234,799,063	-13.2

In 2009, the total tonnage of commodities transported to, from and within Canada totalled 234.8 million tonnes (see text table 12). This was a decrease of 13.2% compared to the 2008 level. For 2009, the top ten commodities carried accounted for 59.7% of all commodities transported in Canada.

The commodity with the largest volume transported in Canada for 2009 was coal at 29.9 million tonnes.

Out of the top ten commodities transported only three saw increases in tonnage compared to 2008. Colza seeds (canola) had the highest percentage growth, rising 20.9% in 2009. Wheat and iron ores and concentrates also rose by 19.2% and 10.1%, respectively. Without these three commodities, the total tonnage transported by rail in Canada would have fallen 19.0% in 2009.

Of the remaining seven commodities in the top ten, potash and lumber experienced the largest drops, falling 58.7% and 25.5%, respectively. While the decrease in potash was mainly due to lower market demand in light of high commodity pricing, the drop in lumber and forestry products was influenced by a number of events similar to those in 2008. These included a weakened housing market in the U.S., mill closures and production curtailments in 2009.

Text table 13 Tonnage and market share of top 3 commodities by principal destination, by origin, 2008 and 2009

	2008	2009	2009/2008 change	Market share, main destination	Market share, all destinations

<sup>1.</sup> Atlantic includes: Newfoundland and Labrador, Nova Scotia, New Brunswick and Prince Edward Island.

<sup>2.</sup> Alberta includes Northwest Territories.

Text table 13 shows the top three commodities between an origin and its principal destination, total tonnage between these origins and destinations and total traffic for origins. This table also shows the percentage change between 2009 and 2008, the market share of each variable with regard to the total tonnage between an origin and a destination, and the market share of these variables with regard to the origin's total traffic. The following text contains the highlights of the table.

#### Atlantic - Quebec

Iron ore and concentrates remained the main commodity transported from the Atlantic region to ports in Quebec in 2009. The commodity accounted for 97.1% or 21.9 million tonnes of all commodities transported between the two regions. Total commodities from the Atlantic region to all destinations stood at 28.3 million tonnes in 2009, up 1.9% from the previous year.

#### Quebec - United States and Mexico

Traffic from the province of Quebec to the United States and Mexico accounted for 38.8% of all traffic originating from Quebec. In 2009, the three main commodities transported from Quebec to the United States and Mexico were aluminum - primary or semi-finished, other basic chemicals and mixed loads or unidentified freight. All three commodities showed a decrease in tonnage from 2008, with mixed loads and unidentified freight representing the largest drop at 34.9%. The remaining two commodities, other basic chemicals and aluminum - primary or semi-finished, showed declines of 8.4% and 4.0%, respectively, over 2008 levels.

#### Ontario - United States and Mexico

In 2009, traffic from Ontario to the United States and Mexico stood at 8.4 million tonnes, down 37.0% from 2008. The United States and Mexico accounted for 34.7% of all of Ontario's markets. The main commodity transported from Ontario to the two countries was sulphuric acid, which fell 36.8% to 771.4 thousand tonnes.

#### Manitoba – Ontario

For 2009, the principal destination for transporting commodities originating in Manitoba was Ontario. The main commodity transported between these two regions was wheat at 1.6 million tonnes, a gain of 26.1% over 2008. This commodity represented 50.2% of the total tonnage of all commodities originating in Manitoba and transported to Ontario.

#### Saskatchewan - British Columbia

British Columbia was the main destination for commodities originating in Saskatchewan in 2009. For the year, British Columbia accounted for 44.1% of Saskatchewan's traffic. The main commodities transported between the two provinces were wheat with 3.9 million tonnes, colza seeds (canola) with 3.2 million tonnes and fresh, chilled or dried vegetables with 2.4 million tonnes.

#### Alberta - British Columbia

In 2009, the main commodity transported from Alberta to British Columbia continued to be coal at 5.9 million tonnes. Wheat and sulphur followed at 5.8 million tonnes and 3.0 million tonnes, respectively. Of the three commodities, wheat and coal showed gains of 29.1% and 2.1%, respectively, while sulphur dropped by 14.7%.

#### British Columbia - British Columbia

Coal remained by far the leading commodity transported within British Columbia in 2009 with 19.7 million tonnes - a decrease of 14.5% over 2008. Coal also accounted for 71.1% of the total tonnage shipped within British Columbia. Wood pulp and wood chips, the next main commodities transported, were far behind with 2.1 million tonnes and 1.5 million tonnes, respectively.

#### United States and Mexico - United States and Mexico

United States and Mexico were the main destinations for commodity shipments originating within these two countries. The three main commodities that were transported within the United States and Mexico in 2009 were other oil seeds and nuts - other agricultural product, other cereal grains and wheat. These three commodity groups accounted for 59.9% of the total tonnage transported within the two countries. Other oil seeds and nuts - other agricultural product were the main commodity with 1.4 million tonnes, while other cereal grains and wheat followed with 1.3 million tonnes and 986.7 thousand tonnes, respectively.

Atlantic Region includes: Newfoundland and Labrador, Nova Scotia, New Brunswick and Prince Edward Island.

For confidentiality reasons, other non-metallic mineral products include the tonnage of gypsum.
 COFC and TOFC tonnage is included in the grand total.
 Note(s): Data for COFC and TOFC from Atlantic have been revised for 2002 and 2003; please contact Transportation Division for revisions.

<sup>2.</sup> Alberta includes Northwest Territories.

# Survey concepts and data limitations

## Collection authorities and related classifications

Railway statistics contained in this publication were collected in accordance with the provisions of the Carrier Information Regulations under Section 50 of the Canada Transportation Act and Chapter S-19 of the Statistical Act (Revised Statutes of Canada 1985).

Financial, operating and commodity statistics are produced from reports submitted by railway carriers. Most of the reporting companies operate within the legislative authority of Transport Canada (TC). Financial details of railways are reported in accordance with the Uniform Classification of Accounts (UCA), as prescribed by the Canadian Transportation Agency (CTA). Readers are advised to refer to the Uniform Classification of Accounts to assist in the interpretation of the information presented in this publication.

Since 1997 industry data have been published in accordance with the North American Industrial Classification System (NAICS). This industry classification system is based on a production-oriented economic concept and allows comparability of data among the following participating countries: Canada, United States and Mexico.

Rail Transportation falls under NAICS sub-sector 482, which is classified as follows:

- Short-Haul Freight Rail Transportation (482112)
- Mainline Freight Rail Transportation (482113)
- Passenger Rail Transportation (482114)

Railway companies providing scenic and sightseeing train excursions as their primary activity are classified under the 487110 NAICS industry group and are not included in this publication.

## Comparability with previous years

Railway companies that were under the legislative authority of the Parliament of Canada prior to 1997 were classified as follows:

Class I Canadian National Railway Company (CN), Canadian Pacific Railway Company (CP) and VIA

Rail Canada Inc., and related operations.

Class II Other carriers involved in Canadian rail (freight) transportation. Class III Other companies such as terminal, bridge and tunnel companies.

Under NAICS, CN and CP are classified as 482113, while VIA Rail is classified as 482114. Regional and short-haul carriers, previously classified as Class II carriers, are classified as 482112.

Support activities for transportation have been consolidated under NAICS sub-sector 488. The former Class III companies are now classified as Support Activities for Rail Transportation under 488210. Data from these companies are no longer included in this publication.

Employment statistics are collected in accordance with the Uniform Classification of Railway Employees (introduced January 1, 1964).

Commodity detail is reported according to the U.S. Standard Transportation Commodity Codes (STCC) and since 1999, converted to a 512 code Standard Classification of Transported Goods (SCTG).

Data from 2005 to 2009 are provided in this publication for NAICS 482113, 482114 and 482112.

# Survey methodology, coverage and data limitations

The "Rail in Canada, 2009" publication is comprised of two annual surveys – the Annual Rail Survey and the Rail Commodity Origin and Destination Survey. As the objectives, coverage and methodologies of these surveys are not identical, this section will provide a detailed breakdown of each of these elements.

# **Survey Descriptions**

## **Annual Rail Survey (Financial and operating statistics)**

## **Description**

Annual financial, operating and employment data on railways operating in Canada are collected in the Annual Rail Survey. The data are used as input to the Canadian System of National Accounts, by Transport Canada, other federal and provincial departments, and by transportation companies, consulting firms, universities and foreign governments. The information is used for the analysis of transportation activity, for marketing and economic studies, as well as industry performance measures.

## **Target population**

The target population for this survey is all rail carriers operating in Canada providing passenger and/or freight transportation services to the general public or to the industrial sectors. Excluded from the survey are companies that provide rail support services (bridge and terminal service, etc.) and sightseeing tours.

#### **Data source**

This survey is a census. Responding to the survey is mandatory. Data are collected directly from survey respondents. Financial and operating statistics are collected from a mail census of railways operating in Canada. Companies falling under federal jurisdiction report data on schedules or forms, specified by Transport Canada directly to Transport Canada. Other railways report directly to Statistics Canada using the same schedules or forms.

Data for new rail carriers are only added into the publication after they have performed operations for a full year. In cases where carriers provide revised data for past years following a publication release, revisions will appear in a subsequent publication.

## Instrument design

The survey questionnaire was developed in collaboration with specialists from Statistics Canada, Transport Canada and the Canadian railway industry. The questions were field tested to ensure that they were reasonable and sustainable. The questionnaire has remained stable over the years.

#### **Error detection**

Individual reports undergo comprehensive review upon receipt and are edited for consistency and reliability. Responses in a given year are compared with responses in a previous year for consistency. The data are also validated through the use of various computerized edits to check the calculation of completed fields as well as the relationships between selected fields. Errors are thereby identified and corrected.

## **Imputation**

Missing or incorrect values are modelled only in cases where carrier information has not been received on time or is incorrect.

## **Quality evaluation**

The combined survey results are analyzed before dissemination. In general, this includes a detailed review of the data, a review of general economic conditions, as well as monitoring historic trends and confronting the data with other sources.

Users are advised to consult the Uniform Classification of Accounts<sup>1</sup> for concepts and reporting definitions as survey results may be misconstrued or improperly interpreted without prior knowledge of the accounts.

#### **Disclosure control**

Statistics Canada is prohibited by law from releasing any data which would divulge information obtained under the Statistics Act that relates to any identifiable person, business or organization without the prior knowledge or the consent in writing of that person, business or organization. Various confidentiality rules are applied to all data that are released or published to prevent the publication or disclosure of any information deemed confidential. Therefore, data regarding regional and short-haul carriers have been grouped. If necessary, data are suppressed to prevent direct or residual disclosure of identifiable data.

## **Data accuracy**

The methodology of this survey has been designed to control errors and to reduce the potential effects of these errors. However, the results of the survey remain subject to a certain degree of non-sampling error. Examples of non-sampling error are coverage error, data response error, non-response error and processing error. A discussion of these types of errors and the steps taken to address them follows.

Coverage error can result from incomplete listing and inadequate coverage of rail carriers in Canada. For the survey, the limited number of rail carriers in Canada reduces considerably the risk of this type of error occurring.

Data responseerror may be due to questionnaire design, the characteristics of a question, inability or unwillingness of the respondent to provide correct information, misinterpretation of the questions or definitional problems. For the survey, these types of errors are controlled through careful questionnaire design, the use of simple concepts and consistency checks.

*Non-response error* is related to respondents that may refuse to answer, are unable to respond or are too late in reporting. For the survey, non-response error is mitigated by the close contact Statistics Canada staff maintains with the respondents throughout the year. As a result of this close contact, the response rate for the survey remains high.

*Processing error* may occur at various stages of processing such as data entry, editing and tabulation. For the survey, various measures have been taken to minimize these errors. For instance, data entry and edit are performed simultaneously due to the spreadsheet design which allows errors to be quickly seen. As well, historical ratios aid in eliminating outliers created by data entry. Finally, tabulation is automated to eliminate human error.

## **Data Limitations**

To be valid for time-series and cross-sectional analysis, the definitions of data must be consistent within time periods and across time periods. In other words, the differences and similarities in data must reflect only real differences and not differences in the concepts or definitions used in preparing the data.

<sup>1.</sup> Users can consult the Uniform Classification of Accounts at the following URL: www.cta-otc.gc.ca/rail-ferro/finance/uca/index\_e.html

Due to changes in the derivation of certain variables related to income, assets and liabilities for reference year 2009, caution should be used in carrying out year-over-year comparisons. The specific variables affected by these changes are indicated and discussed throughout the publication.

As a result of the conceptual differences in the groupings of carriers before and after the introduction of NAICS in 1997, a break in the rail data series was created. As such, publications released after 1999 were considered NAICS compliant whereas years prior to 1999 were not. In order to address the non-compliance of past years, a major revision of the annual rail database was performed. In light of this revision, railway data dating back to 1986 are now considered NAICS compliant, with the exception of data used to produce statistical table 5 in the publication. For this table, it was not possible to consolidate the data with past years since provincial collection of the data did not occur prior to 1996.

Les données financières et d'exploitation peuvent varier d'une année à l'autre suite à des fluctuations dans le taux de change sur les devises, des reclassements des comptes, etc. Les données sont également influencées par les fusions et acquisitions et les compagnies qui entrent ou sortent de l'industrie.

It is also important to note that the universe of regional and short-haul carriers changes regularly. In order for the user to fully understand the data provided in various tables regarding this group, it is recommended that the user examine the following table that describes the number of regional and short haul carriers that have provided data for a particular table by year.<sup>2</sup>

Text table 1
Number of Regional and Short Haul carriers

# **Rail Commodity Origin and Destination Survey**

## **Description**

Data on origin and destination of commodities carried by rail transportation are collected in the Rail Commodity Origin and Destination Survey. The data are used by Statistics Canada as input to the Canadian System of National Accounts, by Transport Canada, other federal and provincial departments, by transportation companies, consulting firms, universities and foreign governments. The information is used for the analysis of transportation activity, for marketing and economic studies, as well as for industry performance measures.

## **Target population**

The target population consists of Canadian railways such as Canadian National Railway (CN), Canadian Pacific Railway (CP), carriers that interline with CN and CP, as well as a number of regional and short-haul carriers that do not interline with either CN or CP.

<sup>2.</sup> The variation in the number of regional and short haul carriers contributing data for specific tables in the publication is the result of some carriers not providing such data for any year of operation. Consequently, there is no basis for imputation measures for these carriers in the survey.

#### **Data source**

Responding to this survey is mandatory. Data are extracted from administrative files provided by Transport Canada. Commodity origin and destination statistics are provided to Transport Canada (TC) and represent an annual census of waybill records from the two major railways - CN and CP. Freight interlined with regional and short-haul carriers is included while interline duplication between CN and CP is removed. The origin and destination data also include a number of regional and short-haul carriers that do not interline with either CN or CP.

Each waybill record represents a freight movement and shows origin, destination, commodity code, tonnage and other related information. Freight interlined between two or more Canadian rail carriers is included only once - unless specified otherwise - to avoid duplication. Traffic handled in intermediary switching service is excluded.

Both railways classify commodities using the seven-digit Standard Transportation Commodity Codes (STCC) for their own internal purposes. Before their release to Statistics Canada, however, these commodity codes are converted to an aggregate form of the Standard Classification of Transported Goods (SCTG) - the same commodity groups used for Carloadings statistics. The SCTG codes are a Canada-U.S. initiative, designed to provide categories for the 1997 U.S. Commodity Flow Survey (CFS) and to improve the integration of Canadian transportation data, particularly for marine, truck, and rail. The classification is also designed to permit comparison of Canadian and U.S. transportation data.

In terms of classifying points of origin and destination in Canada, CN reports a Standard Point Location Code (SPLC), while CP provides a Freight Station Accounting Code (FSAC). In the case of intermodal traffic, the point of origin and destination is the point where the rail traffic begins or terminates. In the case of interlined shipments, the point of origin and destination refers to the rail transport origin and destination, which may differ from the point at which CN or CP picked up or delivered goods.

The shipments with Canadian origin which terminate in the United States, as well as shipments originating in United States which terminate in Canada, are included in the data.

In-transit traffic, which refers to movements where both the origin and the destination reported are in the United States, is not included in the tabulation results.

#### **Error detection**

At the micro level, several checks are performed on the data to verify internal consistency and identify extreme values. At the macro level, the data are subjected to a detailed quality review process, including a comparative analysis to prior years. Material errors are thereby identified and corrected.

## **Imputation**

Missing or incorrect values are modelled only in cases where carrier information has not been received on time or is incorrect.

#### **Quality evaluation**

The survey results are analyzed before dissemination. In general, this includes a detailed review of the data, a review of general economic conditions, as well as historic trends and comparisons with other data sources.

#### **Disclosure control**

Statistics Canada is prohibited by law from releasing any data which would divulge information obtained under the Statistics Act that relates to any identifiable person, business or organization without the prior knowledge or the consent in writing of that person, business or organization. Various confidentiality rules are applied to all data that are released or published to prevent the publication or disclosure of any information deemed confidential. If necessary, data are suppressed to prevent direct or residual disclosure of identifiable data.

## **Data accuracy**

The methodology of this survey has been designed to control errors and to reduce the potential effects of these errors. Since the survey is a census of the target population, only non-sampling errors are possible. Examples of non-sampling error are coverage error, data response error, non-response error and processing error. A discussion of these types of errors and the steps taken to address them follows.

Coverage error can result from incomplete listing and inadequate coverage of the provinces and territories. For the survey, since the population is comprised primarily of CN and CP, coverage errors are unlikely to happen.

Data response error may be due to questionnaire design, the characteristics of a question, inability or unwillingness of the respondent to provide correct information, misinterpretation of the questions or definitional problems. For the survey, these errors are controlled through careful questionnaire design, the use of simple concepts and consistency checks.

Non-response error is related to respondents that may refuse to answer, are unable to respond or are too late in reporting. For the survey, this type of error is mitigated by the close contact Statistics Canada staff maintains with Transport Canada (the department responsible for data collection) and the respondents.

Processing error may occur at various stages of processing such as data entry, editing and tabulation. For the survey, various measures have been taken to minimize these errors. For instance, data entry and edit are performed simultaneously due to the spreadsheet design which allows errors to be quickly seen. As well, historical ratios aid in eliminating outliers created by data entry. Finally, tabulation is automated to eliminate human error.

## **Data Limitations**

To be valid for time-series and cross-sectional analysis, the definitions of data must be consistent within time periods and across time periods. In other words, the differences and similarities in data must reflect only real differences and not differences in the concepts or definitions used in preparing the data.

As a result of the change in the survey universe in 2001, data on origin and destination of commodities published prior to 2001 are not comparable with data from 2001 and onward. This is because the survey universe expanded to include a number of regional and short-haul carriers that do not interline with CN and CP.

As of 1999, commodities are now classified using the SCTG (Standard Classification of Transported Goods). Table formats prior to 1999 are also no longer available.

Data can be influenced by mergers, acquisitions and companies which may enter or exit the industry.

Note: There are no rail operations in Nunavut or Yukon; there are only tourism operations, which are not included in this survey.

# Appendix I

## **Glossary**

## Average freight carload

This average is obtained by dividing tonne-kilometres by the number of loaded freight car-kilometres.

## Average train speed

Average train speed is obtained by dividing train-kilometres by train hours. Train hours may include en route train switching time.

## **Box car**

A box car is a closed railroad car with a roof and a door which is used for general service.

## Caboose

A freight train car usually attached to the rear of the train for the use of train-men in giving and receiving signals, handling car records, and performing other duties.

## **Canadian rail operations**

Rail operations consist of transportation by rail of goods and passengers (both inter-city and commuter) including intermodal transportation which may involve modes other than rail where such operations are required to complete a rail move.

## **Car-kilometres**

A car-kilometre is the movement of a unit of car on one kilometre of track.

#### Carload

A carload is a shipment that uses one rail car for its transportation.

## **Carrier**

Carrier means the entity having the legal authority to operate the railway.

## **Classification of Carriers**

Railway carriers within the legislative authority of the Parliament of Canada were classified as follows:

Class I Canadian National Railway, Canadian Pacific Limited and VIA Rail Canada Inc., and their related

operations.

Other carriers involved in Canadian rail transportation operations. Class II

## **Classification of employees**

All employees are classified with respect to their occupation and assigned to their proper function and occupational class. Employees that work in more than one classification are prorated accordingly. Service hours and compensation are also distributed among the occupational classes in which the employee has worked.

#### Coach

A term commonly used to designate passenger cars which are used for day travel. They are fitted with conventional or reclining seats.

#### **Common carrier**

A railway that offers its services to the general public to transport passengers and/or goods for compensation.

## **Compensation, Total**

The compensation is the gross amount paid to employees, including vacations, holidays, leaves of absence with pay and before deductions for income tax. Compensation should not include retroactive wage increases, which, although paid during the current year, pertain to a prior period.

## Container on flat car (C.O.F.C.)

Transportation of loaded or empty containers on railway flat cars representing a form of intermodal transport.

## **Current ratio**

A measure of liquidity obtained by dividing current assets by current liabilities. This ratio is used to show the ability to pay current debts from current assets.

## **Debt-asset ratio**

A measure of solvency calculated by dividing total liabilities by total assets.

#### **Debt-equity ratio**

A measure of solvency calculated by dividing total liabilities by owner's equity.

## Delivered to other railways in Canada

Traffic delivered directly to connecting Canadian rail carriers and deliveries to other modes of transport (other than car ferries) when these move at joint rates on through billing, or when a subsequent rail haul is indicated.

## **Delivered to United States rail**

Traffic delivered to United States rail connections or transported across the border by the respondent.

## **Destination**

Refers to the railway destination, not including connecting modes of transport, and is coded by the railway's respective station number. In the case of interlined shipments, the destination refers to the rail transport destination, not the point at which the reporting railway delivered the goods.

## **Employee**

An employee is defined as any person in the service of a reporting carrier, whether on a full-time or part-time basis, and subject to the carrier's continuous authority to supervise and direct the manner of rendition of his service.

## **Employees, Number of**

The number of employees is the average of counts made each month throughout the year. The count is not restricted to the number of personnel actually on duty, and includes all other regularly assigned employees and those on vacation or sick leave with pay. Persons on leave without pay or under suspension are not included.

#### **Employment functions**

The major railway Employment Functions are:

- General
- Road Maintenance
- Equipment Maintenance
- Transportation (non-train and train)

## **Empty car-kilometres**

Kilometres run by freight cars without load, and flat cars loaded with railroad owned or controlled highway trailers or containers, moving without revenue waybill, excluding company service equipment designed for use exclusively in work service.

## **Equipment (operations)**

This activity concerns all operations and transactions related to railway equipment, including locomotives, freight cars, passenger cars, inter-modal equipment, roadway machines, and work equipment. The operations or transactions within this activity include repair and maintenance, leases, rentals and depreciation of railway equipment.

## **Equipment maintenance (employment function)**

This function refers to maintenance and servicing of all motive power, car, shop and power plant equipment.

## First main track

Also referred to as road operated. It is equivalent to the length of single or first main track, measured by the distance between terminals over which railway transportation service is conducted (excludes parallel, yard and siding trackage).

## Fiscal period

Annual data refer to the year ending December 31.

#### Freight car-kilometres

A freight car kilometre is the movement of a freight car over one kilometre of track.

## Freight train-kilometres

The number of kilometres run by all trains between terminals or stations for the transportation of company or revenue freight; also kilometres run by trains made up of empty freight train cars, and by trains consisting of a locomotive and a caboose running light in connection with such service. Freight trains hauling passenger cars are classified as freight trains.

## Freight-train car-kilometres

Kilometres run by loaded and empty freight train cars and caboose cars in transportation service.

## General (operations and employment function)

This activity group concerns all operations and transactions related to the railway as a whole and includes general administration, employee benefits, taxes, insurance, purchasing and material stores. The functions performed in this classification are required to support the overall railway enterprise.

#### Gondola car

A car with sides and ends but no top, used for hauling commodities such as sand, gravel and coal.

## **Gross domestic product**

The gross domestic product is the value of goods and services produced in a country.

## **Gross tonne-kilometres**

A gross tonne-kilometre is the movement of a tonne of rail equipment and intermodal equipment (including freight) over one kilometre of track. This covers all movements over the carrier's tracks except switching operations, including operations by other carriers.

#### Head-end car

A passenger train car designed for transporting mail, baggage, newspapers, milk in cans, etc. and not equipped to accommodate passengers.

## Hopper car

A car which moves dry bulk freight and usually unloads through gravity by vents on the underside.

## **Industrial track**

A switching track serving industries such as mines, mills, smelters and factories.

## Interline freight

Tonnage passing over the lines of two or more carriers. The interchange is termed an interline movement.

## Intermediate switching

A switching service includes all the elements of switching performed by a carrier which neither originates nor terminates the shipment nor receives a line-haul on that shipment.

## Intermodal

Inter-modal operations involve more than one mode of transport to complete the movement of shipments. Goods are carried in a highway trailer or freight container, which is transferred between a rail car and some other mode, usually a truck or ship.

#### International carrier

A carrier that operates between Canada and the United States.

## Inter-provincial carrier

A carrier that operates in more than one province or territory.

### In-transit

In-transit implies cargo or passengers en route between the point of origin and the point of destination.

## Intra-provincial carrier

A carrier that operates in only one province or territory.

## **Joint facility**

Railway tracks, yards, terminals, and other facilities owned by one carrier and used jointly by two or more carriers.

## Length of road operated

The single or first main track measured by the distance between terminals, over which railway transportation is conducted.

## **Light locomotive**

A locomotive which moves under its own power without pulling any cars.

#### Line-haul

The movement of trains between terminals and stations on the main or branch lines of the railway, exclusive of switching operations.

## Loaded

Revenue freight originating directly on the track belonging to the respondent, including that received from private, non- reporting industrial sidings; freight received from switching roads connecting with the respondent where such freight has not previously been given line-haul transportation; freight received from other modes of transport; freight re-shipped following milling or fabrication at some point in transit; and idler or trailer cars.

#### Loaded car-kilometres

Kilometres run by freight cars in freight and passenger trains loaded with revenue or non-revenue freight and also by company service equipment designed for use exclusively in work service.

#### **Local traffic**

Traffic originating and terminating on the same railway without an intermediate haul by a connecting railway.

#### Locomotive unit

A piece of railway rolling stock containing engines used to propel a train along the track but not capable itself of accommodating passengers or freight. Such units may be used singly (with a crew cab) or in conjunction with other units, with all such units usually being controlled from the cab of one of the units.

#### Locomotive unit-kilometres

A locomotive unit-kilometre is the operation of a locomotive unit over a kilometre of track. VIA trains are considered part of the operating carrier's operations.

## Non-revenue freight

Company materials and supplies transported without charge in freight trains of a particular railway for its own use.

## **Occupational classification**

The major railway Occupational Classifications are:

- · Managerial and supervisory
- · Professional, technical and staff assistants
- Clerical
- Running trades
- Working foremen
- Craftsmen, tradesmen, lead hands, service workers and helpers

- · Labourers, including building attendants and coach cleaners
- · Floating equipment employees (Railway) and employees in other operations

## On company service (O.C.S.)

The movement of non-revenue loaded cars for the company's own purposes such as work equipment, rail ties or ballast.

## **Operating ratio**

The operating ratio is the proportion of total operating revenues absorbed by total operating expenses.

## Other main track

Length of track in the third or subsequent line parallel to the first and second main tracks.

## Parlour car

A passenger car of a more luxurious character than a day coach having revolving seats, and other conveniences and on which an extra fare is charged.

## Passenger car

A car equipped to carry passenger, baggage, etc., in passenger train service.

## Passenger car-kilometres

Kilometres run by passenger cars, including both loaded and empty car-kilometres. Passenger car-kilometres in VIA trains may be recorded by both VIA and the operating carrier.

## **Passenger locomotive-kilometres**

The number of kilometres run by locomotives in passenger-train service.

## Passenger train car-kilometres

Kilometres run by passenger train cars, including empty cars deadheaded in connection with passenger service.

## Passenger train-kilometres

Kilometres run by passenger trains, to transport passengers and baggage etc., including trains comprised of deadhead passenger cars.

## **Passenger-kilometres**

The movement of a passenger over a distance of one kilometre. Passenger-kilometres are derived by multiplying the number of passengers by distance travelled.

## Passing tracks and crossovers

Length of track parallel to first or other main track designated for meets and overtakes (passing) of trains and track provided for movement of trains between main tracks.

## **Piggyback**

Piggyback is a term used to describe the transportation of loaded or empty highway trailers, or containers, on rail

## **Private siding**

A small line owned by an individual or company and connected to a railway line.

#### **Private-line cars**

Freight cars owned by companies other than the railways and used for the transportation of goods over various lines. These are sometimes called private cars.

## Railway operations

This activity concerns all of the operations of the railway which are directly involved in providing transportation service, including train operations, yard operations, train control operations, inter-modal operations, station and terminal operations, and other modes of transport used as an integral part of a rail service.

#### Real gross domestic product

The gross domestic product expressed in constant dollars.

## Received from other railways in Canada

Traffic received directly from connecting Canadian rail carriers and receipts from other modes of transport (other than car ferries) when these move at joint rates on through billing, or when a previous rail haul is indicated.

## Received from United States rail destined to Canadian points

Traffic received from United States rail and transported across the border by the respondent, destined to Canadian points.

## Received from United States rail destined to United States points

Overhead traffic representing freight moving from United States rail connections to points in the United States through Canada.

#### Revenue passenger

A person travelling on a train by right of fare.

## **Road maintenance (Employment function)**

This function represents the construction and maintenance of all track and structures and signal installations.

## **Rolling stock**

Transportation equipment on wheels owned by a rail carrier, not including motive power equipment.

#### Second main track

Is equivalent to the length of track in a second line running parallel to first main track where double track (or triple track, etc.) is laid on the same road-bed.

## Self-propelled car

A single motor-powered unit of railway equipment designed to carry passenger or baggage traffic. It is not considered to be a locomotive. It is also referred to as a motor car or rail diesel car.

## Service hours paid for

Hours paid for include time actually worked plus time for such items as vacation, holiday, and leaves of absence when paid for, and applies to all employees.

## **Standard Transportation Commodity Code (STCC)**

The STCC system is a seven digit coding structure designed to classify all commodities or articles transported by

## **Tonne-kilometre**

The movement of one tonne, over a distance of one kilometre.

## Tonnes of revenue traffic

This figure records the total weight of revenue shipments.

## Trailer on flat car (T.O.F.C.)

Transportation of loaded or empty highway trailers on railway flat cars representing a form of intermodal transport.

## **Train**

A unit or a combination of units of equipment (exclusive of light locomotives) equipped with self-contained motor equipment for movement over tracks. A self-propelled car moving on its own is a train, as is a several car freight train.

#### **Train hours**

Train hours are measured as the time taken by a train between departure and arrival station, minus time spent in train switching en route.

## **Train switching**

Switching service performed by train locomotives at terminals and at stations en route.

### Train switching locomotive-kilometres

Kilometres allowed to train locomotives for performing train switching. The time actually taken up in such service is converted into kilometres at a rate of 9.6 kilometres per hour.

#### **Train-kilometres**

A train-kilometre is the movement of a train over one kilometre of track.

## **Trans-border shipment**

A shipment originating in Canada and terminating in the United States as well as a shipment originating in United States and terminating in Canada.

## **Transportation (Employment function)**

This function represents scheduling, dispatching and operating trains and other ancillary services, the operation of terminal facilities and the distribution of cars and motive power. This function is also responsible for the movement of merchandise by means of the integration of express and less than carload operations.

#### **Uniform Classification of Accounts (U.C.A.)**

Uniform Classification of Accounts and Related Railway Records as prescribed by the National Transportation of Canada (now called the Canadian Transportation Agency), for use by all railways under federal jurisdiction. These accounts are also used for railway carriers whose data are collected under the authority of the Statistics Act.

## **Unloaded**

Freight terminating directly on the road of the respondent. It includes, freight delivered to private, non-reporting industrial sidings and grain unloaded at interior, lake and coastal elevators for export. Also freight delivered to switching roads connecting with the respondent where there is no further line-haul; freight delivered to other modes of transport; and, freight unloaded for milling or fabrication at some point in transit.

## Ways and structures (Operations)

This activity concerns all operations and transactions related to the fixed plant of the railway, including track and roadway, buildings, signals, communication and power facilities, terminals and fuel stations. The operations or transactions within this activity include repair and maintenance, leases, rents, and depreciation of railway fixed plant.

## Work train service

A service performed by a train engaged in company service for which no revenue is received.

# Yard switching

Switching service performed by locomotives in yards where regular switching is performed, including both terminal switching and transfer operations within yard limits.

# Yard switching kilometres

Yard switching kilometres are measured as time spent in yard switching (including train transfer), converted to kilometres at a rate of 9.6 kilometres per hour.
