## Highlights

---

- Capital spending intentions by foreign-owned firms are expected to increase by \$5.8 billion, or 14%, in 2011.
- Firms controlled by the United States are expected to account for 61% of capital expenditures by foreign-owned firms operating in Canada.
- The manufacturing sector is expected to have the highest share of capital spending coming from foreign-controlled firms: 52%.

## Note to readers

---

Capital expenditures refer to investments in fixed assets including non-residential buildings as well as machinery and equipment.

This release provides data for three time periods. 2009 data is based on actual capital expenditures. 2010 data is based on preliminary estimates by respondents, made in most cases prior to the fiscal year end. 2011 data is based on estimated capital investment intentions as reported by respondents.

Amounts are in current dollars, and are not adjusted for inflation.

Estimates are for establishments operating within Canada.

# Analysis

---

## Foreign and domestic investment in Canada, 2009-2011

After dropping 28% between 2008 and 2009, and remaining relatively unchanged in 2010, capital expenditures by foreign-owned firms operating in Canada are expected to increase by \$5.8 billion, or 14%, in 2011.

In contrast, Canadian-owned firms are expected to increase capital spending by \$5.3 billion, or 2%, in 2011. Capital expenditures by Canadian-owned firms fell by less than 10% during the 2009 downturn, and rebounded by 12% in 2010.

Firms from the United States accounted for (and are expected to account for) roughly 60% of capital expenditures by foreign-owned firms in Canada between 2009 and 2011. This level is slightly below the share held by the US before their recession began in 2007.

Based on capital spending intentions for 2011, firms controlled by each of the nine countries tracked by the survey are all expected to increase their capital investments from 2010 levels. Growth rates for each of the countries are also all expected to exceed the 2% rate for intended investments by Canadian-controlled firms. Switzerland leads the pack, with an expected 34% increase in capital expenditures, followed by Italy with 25%. Other countries, not individually measured, have 2011 capital expenditure intentions that are 50% higher than 2010 spending levels. These countries are expected to account for 15% of total capital spending by foreign-owned firms in Canada in 2011.

In the manufacturing sector, foreign-owned firms are expected to account for over half of capital spending in 2011. Based on reported intentions, the foreign-owned portion of the sector will increase capital investment by 31%, versus 2% for Canadian-owned firms. The share of capital expenditure accounted for by foreign firms in the accommodation and food services sector is also expected to expand, with capital spending growth of approximately one-third in both 2010 and 2011.

In terms of relative importance, foreign-owned firms have the highest shares of intended capital expenditures in the Northwest Territories (45% of estimated investment for 2011) and Newfoundland and Labrador (44%). Alberta, Newfoundland and Labrador, and Quebec all have expected capital investment from foreign-owned firms in excess of \$1 billion in 2011. Newfoundland and Labrador's expected capital spending is 78% higher than the estimated level of spending for 2010.

## Methodology

---

Data needs by country of control are an additional component to the Capital and Repairs Expenditure Survey (CRES) to meet the needs of the Department of Foreign Affairs and International Trade (Invest In Canada Bureau).

CRES provides data on investments in Canada and in all types of Canadian industries. Data are collected twice yearly, thereby allowing monitoring of intentions and actuals in terms of investments on an annual basis. In October, a questionnaire is sent to gather information on investment intentions for the coming year and preliminary actual data for the current year. In March of the following year, the actual data for the previous year are requested. In this way, this publication includes investment data for three reference years: investment intentions for year 2011, preliminary actual data for year 2010 and actual data for year 2009.

CRES measures a number of variables including capital expenditures for new construction (CC) and capital expenditures for machinery and equipment (CM). These are variables of interest for which Department of Foreign Affairs and International Trade requires estimates by country of control for selected countries for each of the various surveys (investment intentions, preliminary actuals and actuals).

This paper deals solely with the methodology used to derive estimates by country of control. For the full methodology and CRES concepts refer to the latest Statistics Canada annual publication "Private and Public Investment in Canada" 61-205-X (2011).

### Data availability

The country of control can be obtained from the Statistics Canada Business Register. This variable is assigned to establishments appearing on the Register from the Corporations Returns Act program of the Industrial Organization and Finance Division. When the country of control is not available, Canada was assigned as the default value. However, for businesses in the population using a base other than the Business Register, such as the mining and oil and gas extraction sector, countries of control were assigned manually by analysts.

A country of control was therefore available for all units of the population and therefore, for all units of the sample.

### Data quality

A sampling error  $\hat{V}(\hat{Y}(d))$  was calculated in the GES (see Arcaro, 1998 for more details) along with the coefficient of variation (CV) for each estimate produced. The CV is used to determine the relative accuracy of the estimated data. A larger coefficient of variation indicates higher variability of the estimate and, consequently, reduced reliability. The CV is defined by:

$$(1) \quad CV(\hat{Y}(d)) = \frac{\sqrt{\hat{V}(\hat{Y}(d))}}{\hat{Y}(d)}$$

For the full methodology and CRES concepts refer to the latest Statistics Canada annual publication "Private and Public Investment in Canada" 61-205-X (2011).

## **Confidentiality**

Certain rules of confidentiality are of course used to eliminate any information that could lead to the disclosure of data provided by a respondent. These rules enable Statistics Canada to respect its mandate of non-disclosure of respondent information. The rules themselves are confidential and are not available for consultation.

SI	Survey on Intentions
SIC	Standard Industrial Classification
SPA	Survey on Preliminary Actual Data
SS	Sub-sector

**Coefficient of variation** (c.v.) is presented in order to assist the user in judging the quality of the estimate. The sample estimate and its standard error (derived from the coefficient of variation) may be used to construct an interval within which the unknown census value is expected to be contained with a prescribed confidence. For example: if the estimate of the number of employees is 1,000 and the coefficient of variation is 2%, then the standard error or the estimate is 20 (2% of 1,000); therefore, it can be said that 95 times out of 100, the true value, had a census been taken, would be in the interval between 960 and 1,040 (twice the standard error below and above the estimate).

Users should therefore be wary of estimates with high standard errors or with coefficients of variation which change significantly from survey to survey; this is a clear indication that the sample is changing and that the annual movements should be interpreted with caution.

### Letter and significance Coefficient of variation

A	Excellent 0% to 5%
B	Very good 5% to 10%
C	Good 10% to 15%
D	Acceptable 15% to 25%
E	Use with caution 25% to 50%
F	too unreliable to be published 50% and more

**Computer assisted assets are assets** are assets that possess the ability to be programmed for a wide variety of functions and, to a degree, adjust their behaviour in response to changes in their physical environment. Includes robots, numerically controlled machine tool equipment and individual computerized machines.

**Development drilling** expenditures are reported gross whether capitalized or expensed, before deducting any incentive grants and then include expenses for drilling within the proven area of an oil or gas reservoir to the depth of a stratigraphic horizon known to be productive for the purpose of extracting oil or gas reserves. This covers costs of dry wells, including casing and other materials and equipment abandoned in place, productive wells, including capped wells, and wells still in progress at year end. Also included are costs incurred in fighting blow-outs, runaways and in replacing damaged equipment.

**Downstream** expenditures include petrochemical operations and the refining, marketing, transportation of petrochemical products.

**Enhanced recovery projects** include only expenditures on facilities in tertiary projects involving steam injection, miscible flooding. Included are capitalized injection fuel (miscible fluid) costs, as well as the cost of drilling and equipping injection wells /service wells.

**Expenditures on administration and general overhead in the field** may include such items as office rental and support costs, secretarial services, miscellaneous transportation and accommodation, general supplies and equipment, vehicle expenses (repair and maintenance), storage, radio and telecommunications, cooks, watchmen, janitors and miscellaneous supervision.

**Exploration drilling** expenditures are reported gross, whether capitalized or expensed, before deducting any incentive grants, and include drilling outside a proven area, or within a proven area but to a previously untested horizon, in order to determine whether oil or gas reserves exist, rather than to develop proven reserves discovered by previous drilling. They include the cost of dry wells, casing and other materials and equipment abandoned in place, productive wells, including capped wells and wells still in progress at year end. Also included are costs incurred in fighting blow-outs, runaways and in replacing damaged equipment.

**Field expenditures** category includes airborne, surface and underground exploration expenditures. These include the costs of staking, aerial surveys, assessment; diamond drilling, as well as geological, geophysical, and geochemical work, trenching and other surface work, exploration shafts, and other underground exploration work.

**General exploration expenditures** represent all activities and support applied to the search for and delineation of mineral deposits on properties where no production is taking place. General exploration expenditures include field expenditures on all physical work and surveys, mineral lease rental and other land costs, administration, general overhead and head office expenses.

**Geological and geophysical expenditures** refer to costs associated with seismic crew expenses initiated by the companies own workers and those on contract. Expenses incurred for camp, bulldozing and dirt work, flying crews in and out, seismograph, velocity survey, gravity meter, magnetometer, core drilling, photogeological digital processing, magnetic playback, bottom hole contribution, environmental impact studies and/or other similar pre-exploration expenditures. All seismic or geological and geophysical expenditures are reported in this category, whether such activity is deemed exploration or development by the company.

**Head office expenses** represent the portion of the total costs incurred at the head office which are applicable to exploration or development work in the province for which the report is made. These expenses may include costs such as workmen's compensation, workers' benefits, office overhead, legal costs or any costs which have not been reported in Field Expenditures, Mineral Lease/Land Costs or Administrative Expenditures.

**Mine-site development** expenditures are incurred from all work done to outline, block-out and gain access to ore and prepare it for production, on properties in production or committed to production (drilling and excavation to extend proven ore in a producing mine). This includes field expenditures on physical work, mineral lease and other land costs and administrative general overhead and head office expenses. Expenditures on physical work include the costs associated with stripping, shafts, cross-cuts, drifts, ramps, rises, diamond drilling and various services such as hoisting and ventilating.

**Mine-site exploration** expenditures represent all activities and support applied to the search for and delineation of additional mineral deposits (a separate mine) on properties in production or committed to production. Mine-site exploration expenditures include field expenditures on all physical work and surveys (for example, hoisting and ventilating), mineral lease rental and other land costs, administration, general overhead and head office expenses. Within mine-site exploration and as well as development work, the field expenditures shown are those outlays applicable only to physical work and surveys. The other related field costs, such as applied administrative costs, general overhead, and lease rental costs, can be derived residually.

**Mineral lease rental and other land costs** include staking cost and fees, including recording fees; licensing and leasing application and renewal fees and rentals; costs of permits; legal fees pertaining to land or claims; fees paid in lieu of assessment work and costs incurred in meeting environmental requirements.

**Natural gas processing plants** consists of the capitalized amounts of the plants, including structures, measuring, regulating and related equipment.

**Non-conventional sector** relates to operations in the geophysical areas of Cold Lake, Peace River, Athabasca, Wabasca and Lindbergh. The products derived from these operations are either crude bitumen or bitumen processed to the level of synthetic oil at synthetic oil plants.

**Non-production facilities** include automotive, airplane, communication, warehouse, dock, office and miscellaneous equipment not elsewhere specified.

**Outliers** are establishments that have reported expenditures that are inconsistent with the cell (NAICS/province stratum) in which they reside. Establishments identified as such are not representative of any other establishment in the cell or industry and are therefore not used in the calculation of estimates.

**Physical work and surveys** include the costs associated with airborne, surface and underground exploration. These expenditures incorporate diamond drilling, geological, geochemical and geophysical work, trenching, stripping, line cutting and other surface work; shaft sinking and other underground work; wages and salaries for field crews and all costs for contracted field work.

**Production facilities** include tangible well and leased equipment comprising casing, tubing, wellheads, pumps, flowlines, oil and gas gathering systems, separators, treaters, dehydrators, lease and centralized tank batteries. Included are gathering pipelines, batteries and associated facilities used prior to delivery to trunk pipeline terminals, and other production facilities. Also included are costs associated with intangibles such as pre-production study costs and those expenditures that you consider to be pre-development.

**Properties in production or committed to production** can be defined as having essentially met the following criteria; (i) a feasibility study has been undertaken and a formal production decision has been made by the organization, (ii) necessary financing is on hand or has been arranged, (iii) provincial and/or territorial approval (if applicable) has been granted, and (iv) major pieces of production equipment have been purchased.

**Structures** include expenditures for the construction and acquisition of new buildings, other types of surface structures and underground installations not included as part of development expenditures. This includes building construction and all types of engineering construction such as roads, disposal systems and marine works. This category encompasses all capitalized costs such as architectural, legal and engineering fees, as well as the value of the capital assets put in place by firms with their own labour force. Excluded are expenditures for land and residential dwellings.

**Upstream operations and activities** expenditures include costs associated with the development, production, extraction and recovery of crude oil, natural gas, natural gas liquids and sulphur, as well as the production of synthetic oil.

## Capital expenditures

Capital expenditures include the cost of procuring, constructing and installing new buildings, engineering structures and machinery and equipment, whether for replacement of worn or obsolete assets, as additions to existing assets or for lease or rent to others. Also included are all capitalized costs such as feasibility studies, architectural, legal, installation and engineering fees, the value of capital assets put in place by firms either by contract or with their own labour force, as well as the capitalized interest charges on loans with which capital projects are financed. Gross outlays have been reported without any deduction for scrap, trade-in value of old assets and include any grants and/or subsidies received.

Capital expenditures by government departments exclude grants and/or subsidies to outside entities (for example, municipalities, agencies, institutions or businesses) and budgetary items pertaining to any departmental agency and proprietary crown corporation as they are surveyed separately. Federal department expenditures on capital include expenditures paid for by each department, regardless of which department awarded the contract. Provincial department expenditures include any capital expenditures on construction and/or machinery and equipment, for use in Canada, financed through revolving funds, loans attached to revolving funds, other loans, the Consolidated Revenue Fund or special accounts.

The intention is to include the cost of all new buildings, engineering structures and machinery and equipment which normally have a life of more than one year. For this reason respondents are asked to report, as capital expenditures, all purchases to be charged to fixed asset accounts. This method of reporting omits certain types of equipment which are bought and charged to current accounts.

## Capital construction

Expenditures on construction represent a process of human endeavour resulting in the erection, assembly, completion of free standing, static buildings or other types of structures, generally on a permanent foundation, bedding or location. Construction expenditures excludes the purchase price of land but includes outlays for land servicing and site preparation. Construction also includes modifications, additions and major renovations, conversions and alterations where either a structural change takes place or the life of an existing asset is extended beyond its normal life expectancy. Such structures may be above or below the surface of the earth for the passage or storage of materials and/or people. A structure, not classified as machinery, in the form of a building or "other structure" may be defined as an output of construction activity. Such outputs are produced to shelter, support, retain or convey something to someone. All construction activity can be categorized as either building construction or engineering construction.

Building construction represents any permanent structure with walls and a roof affording protection and shelter from and for a social and/or physical environment for people and/or materials. Such structures may also include portable or temporary shelters intended to remain in a particular location for a significant length of time, any subordinate or ancillary attachments to the structures needed to contain, to provide support, access or protection, and the component machinery and equipment which form a part of the structure with functions such as plumbing, electrical wiring, air conditioning, or elevators. For example, building construction represents expenditures on aircraft hangars, factories, hospitals, hotels, office buildings, railway stations, schools and shopping centres.

Engineering construction encompasses the direct or indirect conveyance of people, machinery, materials, gases, and/or electrical impulses. It also includes free standing structures which contain or restrain such objects either as part of such conveyance or separately and independently. Free standing structures erected for the transmission of electrical impulses may also include structures designed to provide light as static illumination of an area or as periodic signalling from a static location. In addition, the cost associated with significantly altering any terrain in the preparation for specialized use of that terrain will fall under engineering construction. Engineering construction includes such items as bridges, roads, highways, waterworks, sewage systems, dams, street lighting, railway tracks and pipelines.

This represents a comprehensive definition of capital construction, however, several industries operate under unique conditions which warrant special consideration. Apart from the above definition, the mining industry incurs expenditures for mine-site exploration, mine-site development, mineral lease rental, field expenditures and general overhead which are included under capital construction. The petroleum and natural gas industry's expenditures on exploration drilling, development drilling, production facilities, enhanced recovery projects and natural gas processing plants are also included under capital construction. For utilities, capital construction encompasses expenditures for transformation, switching stations, production plants and general plant expenditures.

Although housing is not considered a capital expenditure in the sense mentioned above, it has been included in this report because it forms a large proportion of construction expenditures and has cyclical fluctuations similar to those which characterize business, institutional and government capital expenditures.

## **Capital machinery and equipment**

Machinery and equipment corresponds to any combination of interrelated parts which are physically or electro-magnetically dynamic, which use or apply pressure, heat, mechanical, electrical or other energy to do work or where not dynamic, to complete a work environment for people.

Capital expenditures on machinery and equipment represent the total capitalized cost of machinery such as automobiles, boilers, compressors, earth moving and materials handling machines, generators, motors, office and store furniture, professional and scientific equipment, pumps, tools, and transformers.

In addition, machinery and equipment expenditures encompass the cost of any other machinery and equipment not already reported as part of building or engineering construction, exploration or development work (non-production facilities), items that may be termed manufacturing or mining equipment and other related capital goods, whether for the firms own use or for lease or rent to others. Also included are capitalized costs associated with tooling, progress payments paid out before delivery and any balance owing or holdbacks incurred during the survey year. Gross outlays have been reported without any deduction for receipts from the sale of fixed assets or allowance for scrap or trade-in value of old equipment.

## **Leases**

In accordance with the recommendations of the Canadian Institute of Chartered Accountants, leases are divided into two types, operating and capital. Fixed assets purchased for own use or for lease to others, either as a capital lease or as an operating lease are categorized as new capital expenditure. The Canadian Institute of Chartered Accountants recommends that assets acquired through capital (financial) lease be accounted for by the lessee. However, for survey considerations, the assets are reported by the lessor.

## **Used assets**

Used assets are defined as existing buildings, structures or machinery and equipment which have been previously used by another organization. Outlays for used Canadian assets are excluded since they constitute a transfer of assets within Canada and have no effect on the aggregates of our domestic inventory. On the other hand, all expenditures for assets imported from outside Canada increase our domestic inventory and are, therefore, included in the capital expenditures series.

## **Work in progress**

Included in the capital expenditures series are expenditures on work in progress, which represents accumulated or accrued costs on capital projects not completed and which are intended to be capitalized upon completion.

## Classification

The establishment is used by the capital expenditures survey as the primary statistical unit in its measurement of capital and repair expenditures. By definition, the establishment is the smallest operating entity which produces as homogenous a set of goods and services as possible and for which records provide data on the value of output together with the cost of materials used and the cost and quality of labour resources employed to produce the output, and for which records or estimated allocations can provide the full range of production account variables to calculate value added.

The term establishment refers to an organized capacity of production with some degree of specialization. To compensate for diversified production, the North American Industry Classification System (NAICS, catalogue no. 12-501-X) is used to distinguish between primary, secondary and ancillary activities; ultimately grouping individual establishments by primary activity. Under this NAICS version, establishments are grouped into industries, major groups and sectors according to the production of homogenous goods or services and/or participation in similar economic activity. Grouping of establishments in this manner applies to all private and public establishments as well as government owned enterprises. All other government operations are categorized as federal, provincial or municipal services within the government services division. In addition, the concepts and definitions employed by the capital expenditures series are those outlined in the United Nations Concepts and Definitions of Capital Stock and Capital Formation Series F No. 3 of 1953.

Since establishments may have operations in several provinces, the Standard Geographical Classification (SGC, catalogue no. 12-571-X) has been integrated into the capital expenditures survey. The SGC has been designed to subdivide Canada into areas based on provinces, census divisions and census subdivisions as well as separating the census metropolitan areas. The capital expenditures survey has adopted geographical classification at the provincial level, which provides the basis for the stratified sampling of establishments. Extending the geographic breakdown to include census divisions and census subdivisions would require an increased sample for many industries.

## Country of control

In most cases of foreign control, the country of control is the country of residence of the ultimate foreign controlling parent corporation, family, trust, estate or related group. Each subsidiary within the global enterprise is assigned the same country of control as its parent. A company whose voting rights are equally owned by Canadian-controlled and foreign-controlled corporations are assigned the country of control of the foreign-controlled owner. If two foreign-controlled corporations jointly own an equal amount of the voting rights of a Canadian resident company, the country of control is assigned according to an order of precedence based on their aggregate level of foreign direct investment in Canada. For example, United States takes precedence over all other foreign corporations because it has the highest level of foreign direct investment in Canada.
