Under the authority of the *Pest Control Products Act*, Health Canada's Pest Management Regulatory Agency (PMRA) has added new uses on mustard seed (condiment and oilseed types) to the product label of Roundup WeatherMAX with Transorb 2 Technology Liquid Herbicide, containing technical grade glyphosate. The specific uses approved in Canada are detailed on the Roundup WeatherMAX label, *Pest Control Products Act* Registration Number 27487.

Corresponding MRLs were proposed in the consultation document published on 8 December 2011, Proposed Maximum Residue Limit PMRL2011-47, *Glyphosate*. The PMRA received no comments impacting the proposed MRLs in response to this consultation.

To comply with Canada's international trade obligations, consultation on the proposed MRLs was also conducted internationally by notifying the World Trade Organization, as coordinated by the Standards Council of Canada. No comments were received as a result of the World Trade Organization consultation.

MRLs are established for all food commodities in the rapeseed subgroup (Crop Subgroup 20A), except flax and rapeseeds (canola) for which MRLs are already established.

The following MRLs take legal effect in Canada as of the publication date of this document and are in addition to the MRLs currently established for glyphosate.

Common Name	Residue Definition	MRL (ppm)	Food Commodity
Glyphosate	<i>N</i> -(phosphonomethyl)glycine, including the metabolite aminomethylphosphonic acid	10	Borage seeds, cuphea seeds, echium seeds, Gold of Pleasure seeds, Hare's ear mustard seeds, milkweed seeds, mustard seed (condiment type), mustard seeds (oilseed type), oil radish seeds, poppy seeds, sesame seeds, sweet rocket seeds

Established Maximum Residue Limits for Glyphosate

ppm = parts per million

A complete list of pesticide MRLs established in Canada, as of the date indicated, can be found on the Maximum Residue Limits for Pesticides webpage in the Pesticides and Pest Management section of Health Canada's website.
