Date Released: May 2012

New Home Market

Winnipeg housing starts edge down in April

Home builders in the Winnipeg Census Metropolitan Area (CMA) began construction on 256 units in April, down slightly from 261 in April 2011. Higher single-detached construction was offset by a decline in the multi-family sector. After four months, total housing starts for 2012

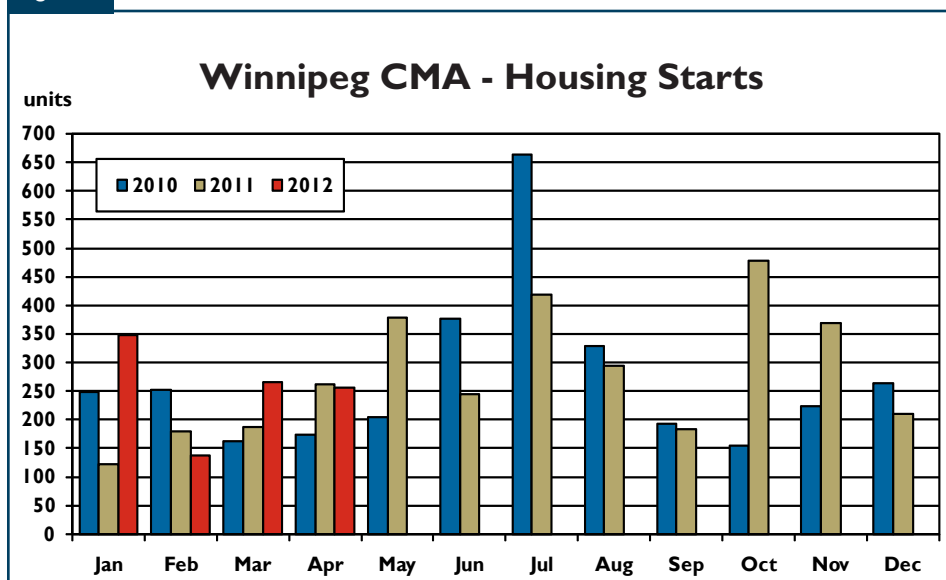

numbered 1,007 units, up from 751 starts during the same period of 2011.

Single-detached builders started work on 168 units in April, four per cent more than the 161 started in April 2011. Rising employment and improved earnings continued to support demand for single-detached homes, keeping construction levels elevated. After four months, single-detached starts totalled 561 units, 10 per cent more than during the same period one year earlier. This brought

the number of single-detached units under construction to 1,329, 11 per cent more than one year earlier and a 24-year high.

Builders across the CMA put the finishing touches on 78 single-detached homes in April, three times more than were completed during April of last year. This helped boost the number of units completed year-to-date to 233, 38 per cent more than were completed during the corresponding period of 2011. Single-detached absorptions also saw a substantial increase in April, numbering 82 units, more than double the 36 units absorbed in April of last year.

Year-to-date there have been 303 units absorbed, 22 per cent more than in the first four months of 2011. With absorptions keeping pace with completions, the inventory of completed and unoccupied single-detached homes remains virtually unchanged, numbering 114 units in April 2012 compared to 113 units in April 2011. This is below the five-year average inventory of 198 units. However, adding the elevated number of units under construction to inventory, the total supply at the end of April stood at 1,443 units, 10 per cent more than at the end of April 2011. At the current six-month

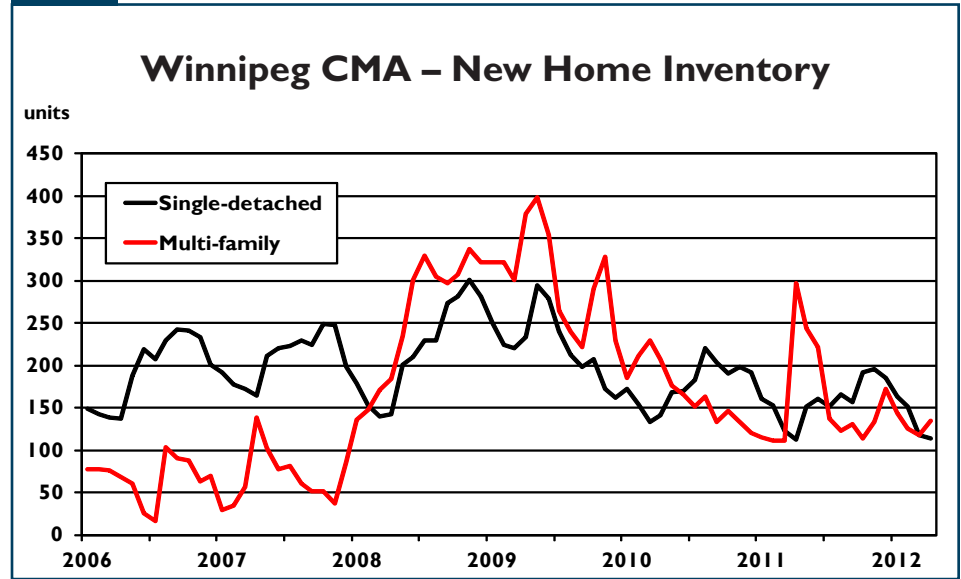

average rate of absorption, this represents 14 months of supply.

The average price of a new single-detached home absorbed in the Winnipeg CMA in April was \$389,447, down five per cent from the average price posted in April 2011. The higher price in April of last year was due a larger share of homes priced above \$450,000 being absorbed, causing the overall average price to increase. The median price, on the other hand, saw a six per cent increase, going from \$345,900 in April 2011 to \$365,640 in April 2012. The year-to-date average price was \$401,930, an increase of less than one per cent from the prior year.

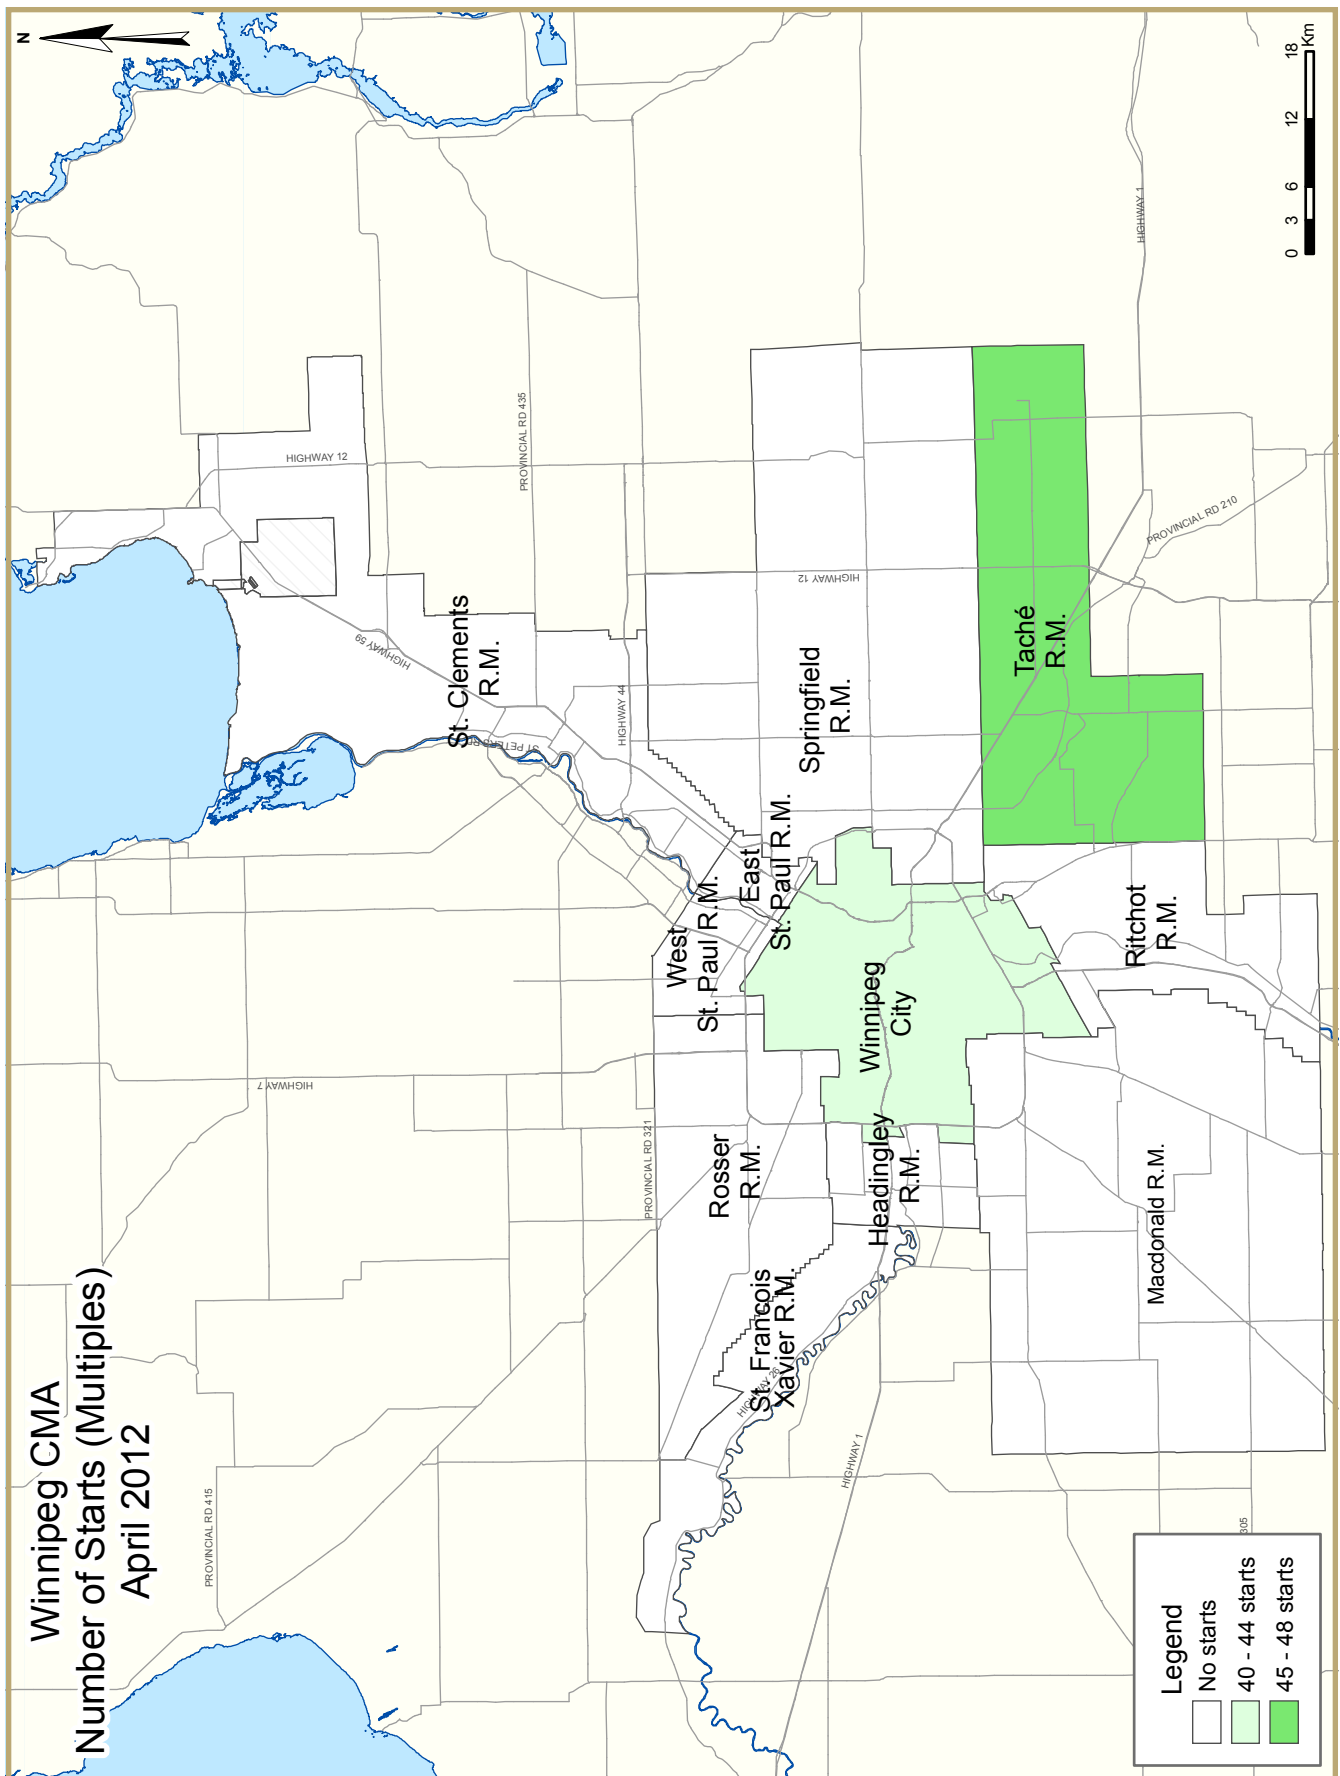

Meanwhile, the multi-family sector, which includes semi-detached units, rows, and apartments, saw 88 units break ground in April, down 12 per cent from the 100 units started one year earlier. Year-to-date, multi-family starts totalled 446 units, 84 per cent more than the 242 units started a year earlier. Most of the gains have been in apartment starts, where the 347 starts year-to-date more than doubled the number of units started in the first four months of last year. The number of multi-family units under construction at the end of April was 1,501, 29 per cent more than the 1,165 units under construction at the end of April 2011.

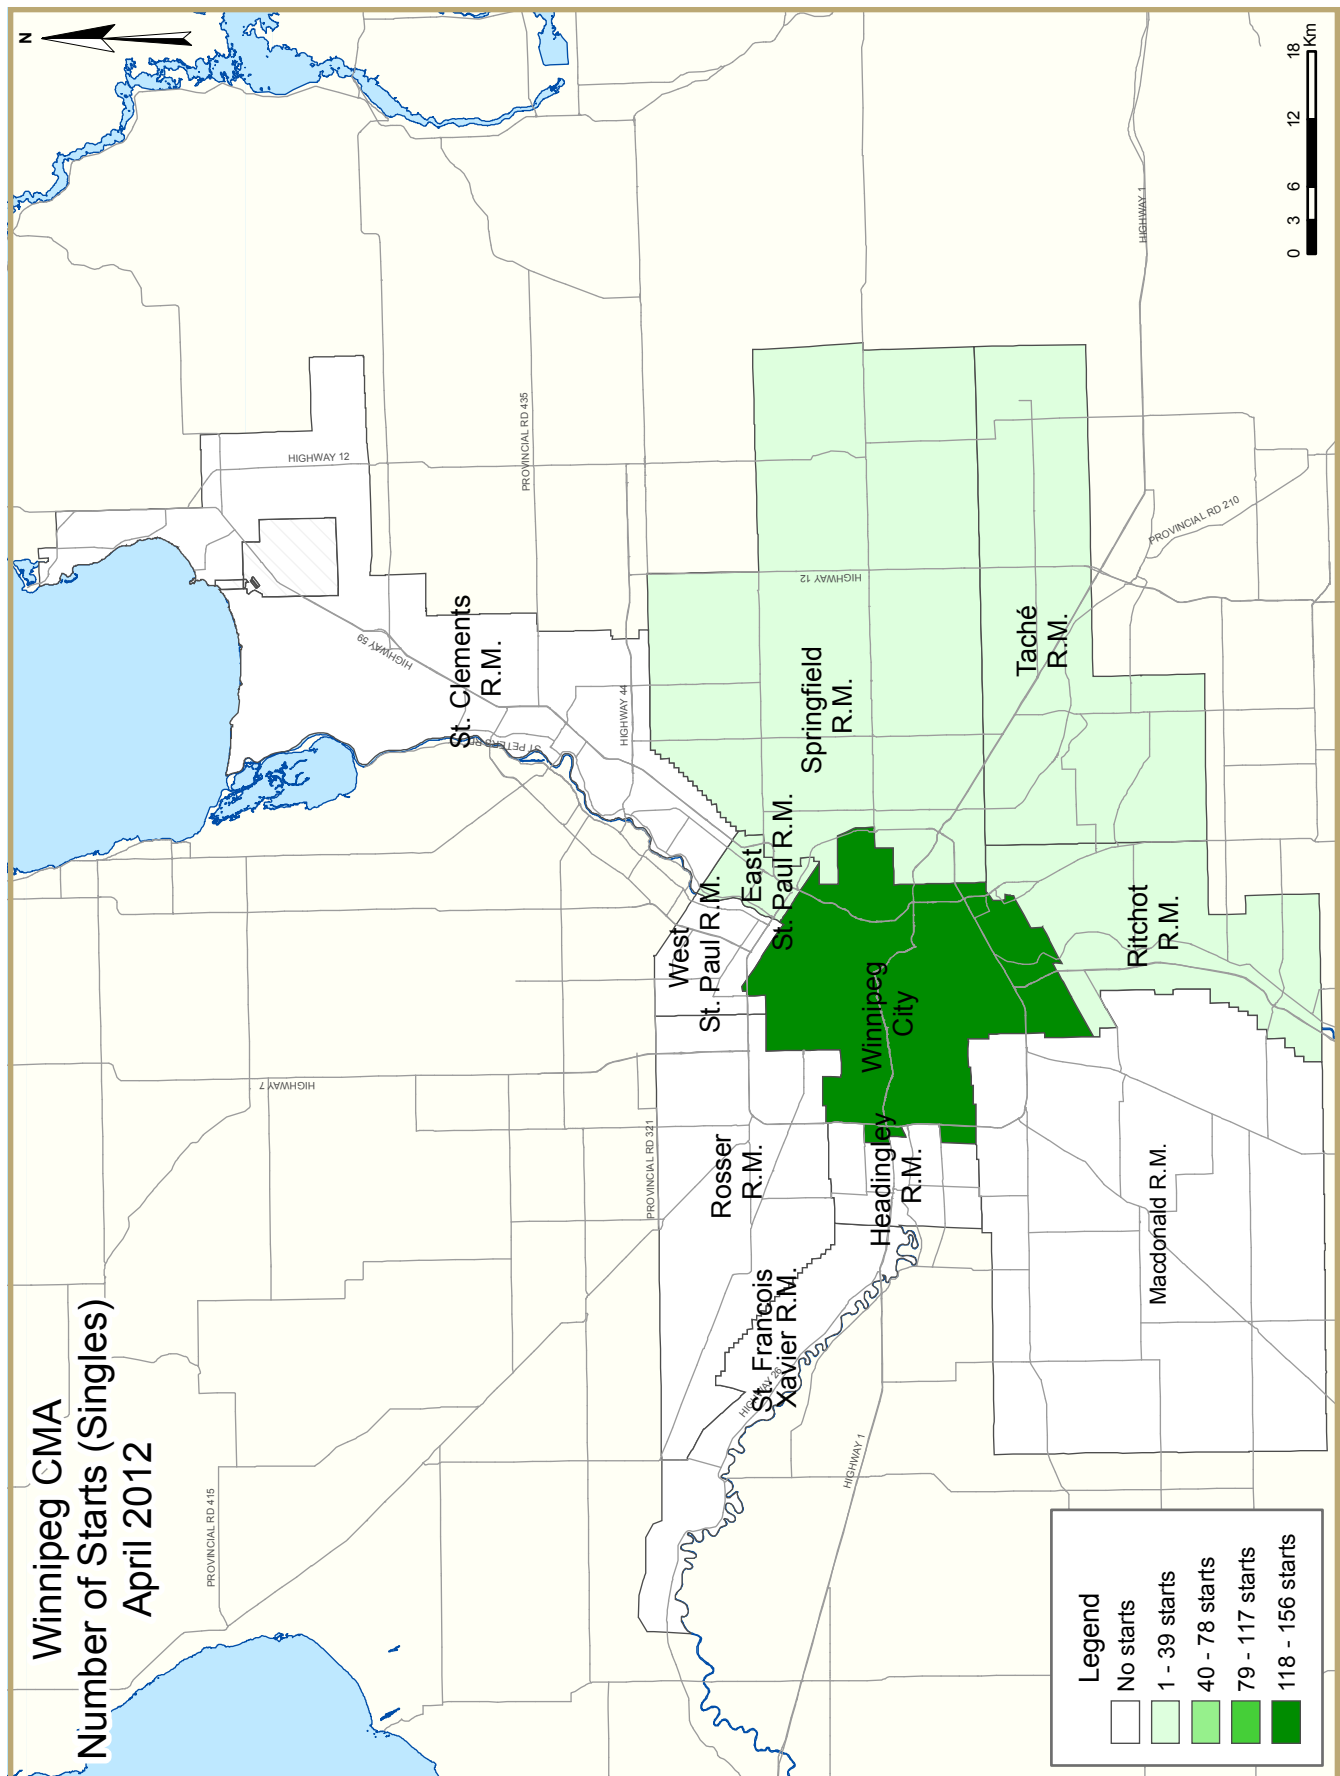

There were 63 multi-family units completed in April, a decline of 80 per cent from the 321 units completed in April 2011. After four months, 220 multi-family units completed construction, a decrease of 37 per cent from the corresponding period of 2011. Absorptions to the end of April totalled 243 units, an increase of 43 per cent over the number of units absorbed in the same period of 2011. The inventory of multi-family units completed and not absorbed at the end of April was 135 units, less than half of the 297 units in inventory in April 2011. Total supply however, which includes units under construction, stood at 1,636 units at the end of April, 12 per cent higher than the previous year.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
