

# HOUSING NOW

## Winnipeg CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: August 2012

## New Home Market

### Winnipeg housing starts moderate in July

Home builders in the Winnipeg Census Metropolitan Area (CMA) began construction on 311 units in July, down from 419 in July 2011. Higher single-detached production was offset by a decrease in the multi-family sector. After seven months, total housing starts for 2012

numbered 2,233 units, up 24 per cent from the same period of 2011.

Single-detached builders started work on 234 units in July, 19 per cent more units than initiated in July 2011.

Housing demand in Winnipeg remains strong due to positive in-migration and employment gains. After seven months of construction, single-detached starts totalled 1,179 units, nine per cent more than were started during the same period last year.

Builders also completed 219 single-

detached homes in July, 18 per cent more than during July 2011. This brought the number of homes completed thus far in 2012 to 974, eight per cent more than completions from the same period of 2011. The number of single-detached units under construction at the end of July was 1,206, rising 16 per cent year-over-year.

There were 221 single-detached homes absorbed in July, 13 per cent more than the 196 absorbed one year prior. This brings the number of units absorbed during the first seven months of 2012 to 983, four per cent

more than during the same period of 2011. With monthly absorptions slightly surpassing completions, the inventory of completed and unoccupied single-detached homes decreased from the previous month, reaching 170 units in July. Despite this month-over-month reduction, the number of complete and unabsorbed singles was 13 per cent higher than the previous year. Total supply, which includes the number of units under construction, stood at 1,376 units at the end of July, 16 per cent more than one year earlier. At the current six-month average rate of absorption, this represents nine months of supply.

The average price of a new single-detached home absorbed in the Winnipeg CMA in July 2012 was \$398,060, up two per cent from the average price posted in July 2011. The year-to-date average price was \$388,888, an increase of less than one per cent from the prior year. The price category with the highest market share continues to be between \$300,000 and \$349,900 with 26 per cent of all homes falling into this category year-to-date, down from a 30 per cent share one year earlier.

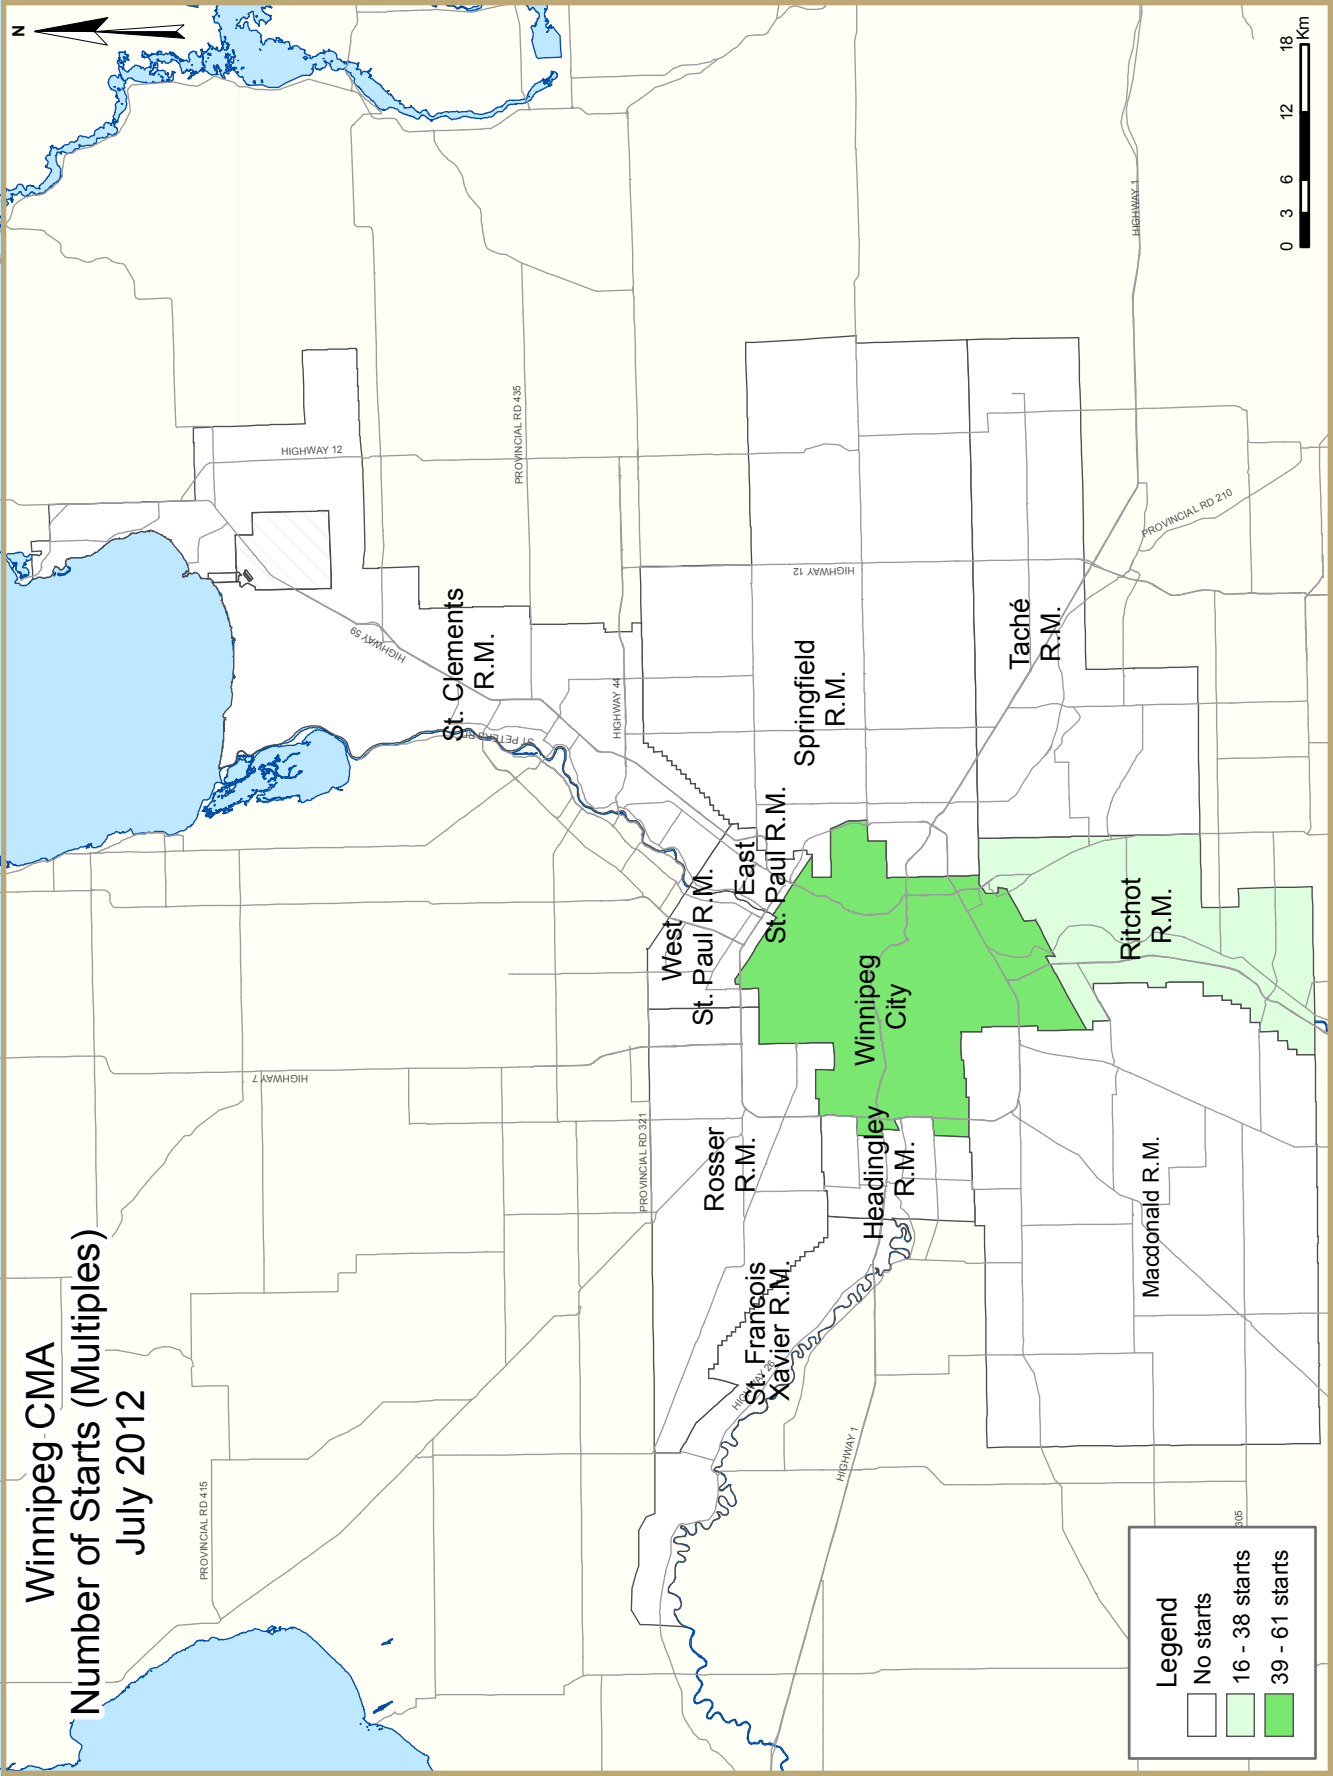

The multi-family sector, which includes semi-detached units, rows, and apartments, saw 77 units break ground in July 2012, approximately one-third of the 223 units started one year earlier. Despite the moderation, multi-family construction remains strong in the Winnipeg CMA as population growth is feeding demand for condominium and rental units. Year-to-date multi-family starts totalled 1,054 units, 48 per cent more than the 714 units started in the first seven months of 2011. The greatest increase in activity was in semi-detached units where starts more than doubled from 34 to 76 units year-to-date. Apartment starts, at 872 units, saw an increase of 73 per cent, while row starts, at 106 units saw a decrease of 40 per cent under the same comparison.

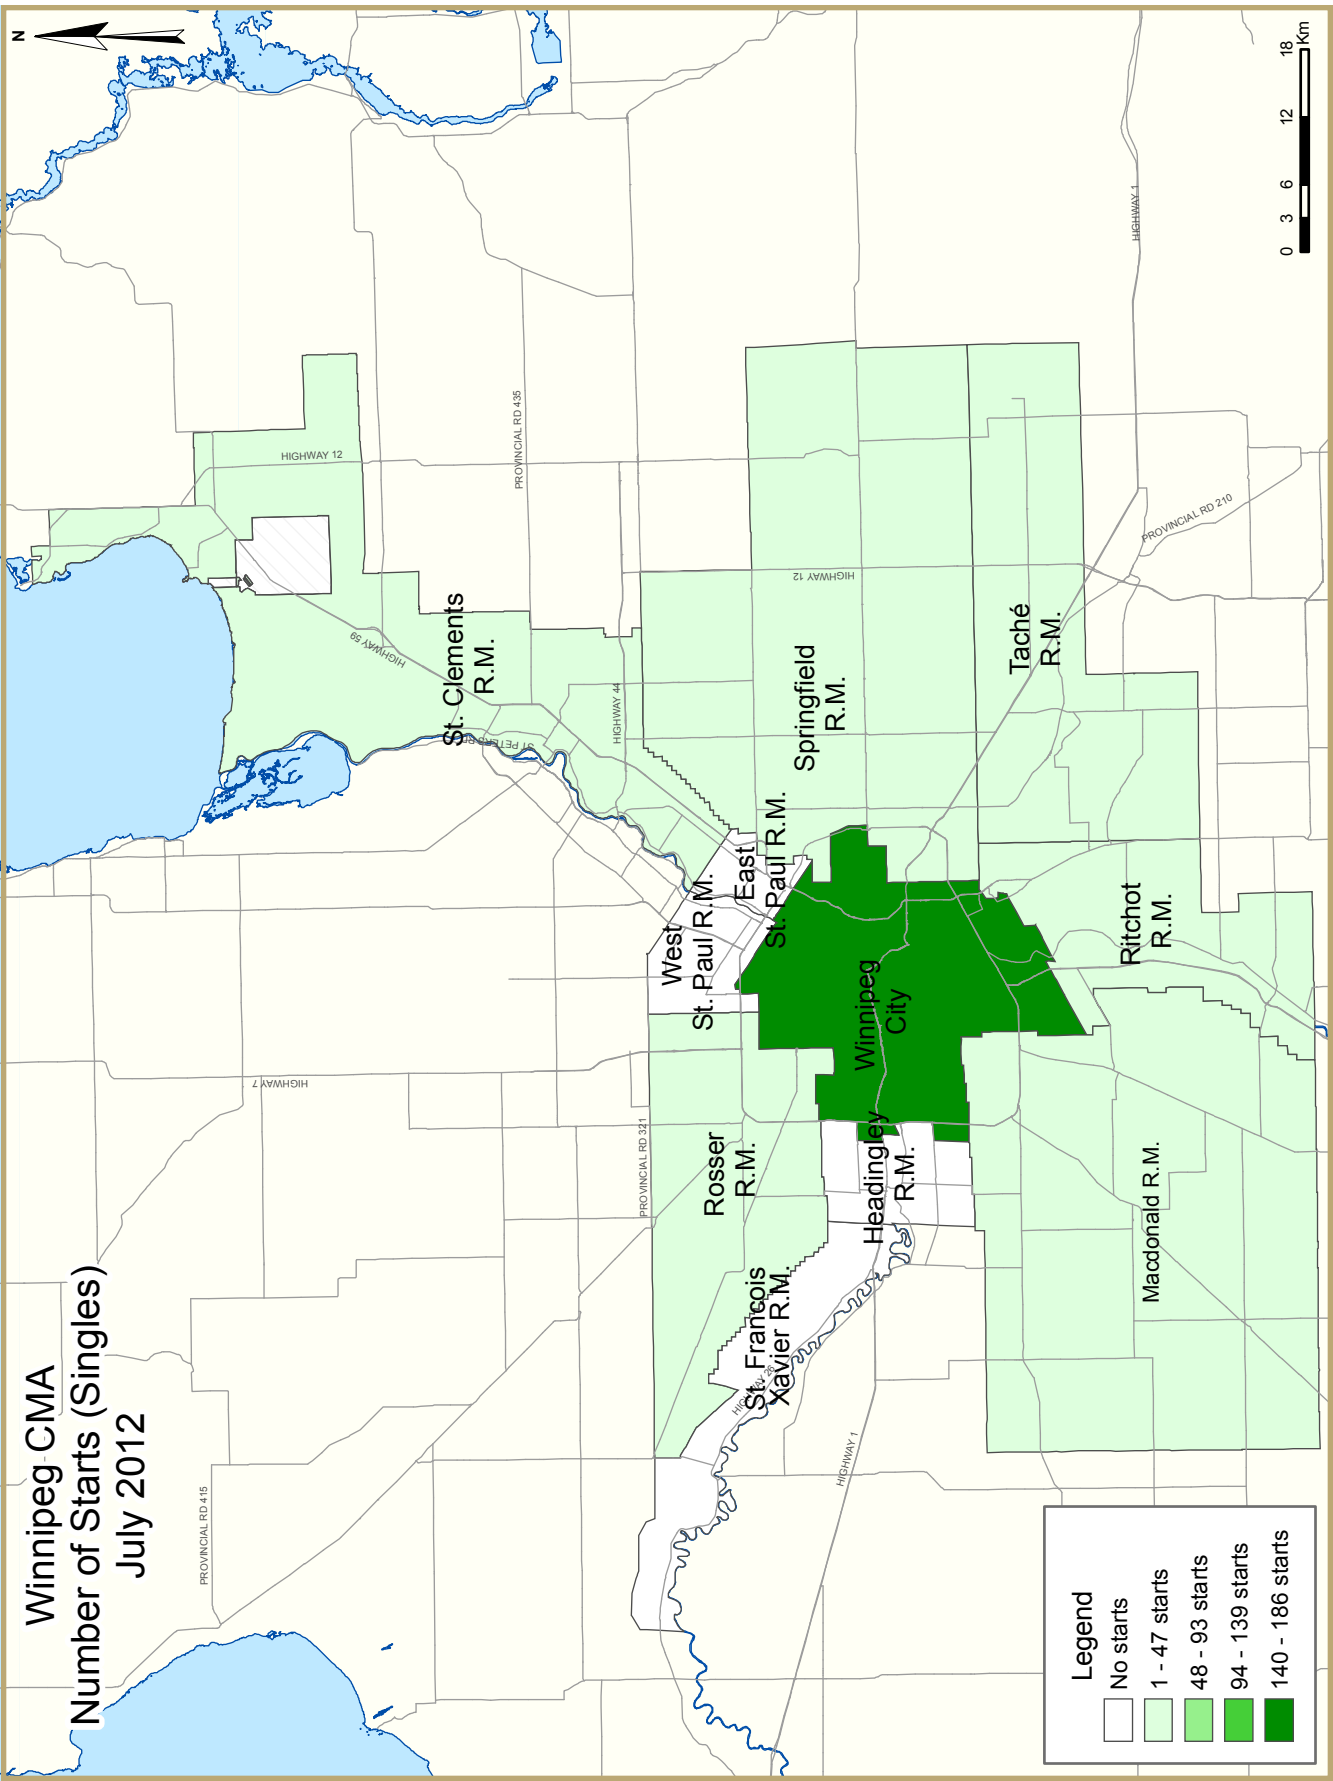

The number of multi-family units under construction at the end of July 2012 was 1,561, seven per cent more than the 1,457 units under construction at the end of July 2011. There were 159 multi-family units absorbed in July 2012, 43 per cent more than the 111 units absorbed one year earlier. Year-to-date, absorptions totalled 638 units, an increase of 23 per cent over the number of units absorbed in the same period of 2011. The inventory of multi-family units completed and not absorbed at the end of July 2012 was 251 units, 83 per cent more than the 137 units in inventory in July 2011. At 228 units, the majority of multi-family units in inventory were apartments.

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
