

# HOUSING NOW

## Victoria CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: January 2012

## Fewer Housing Starts in 2011

A resale market at levels lower than reported over the last ten years was reflected in slower residential construction activity in the Victoria Census Metropolitan Area (CMA) in 2011. Construction started on 72 new homes in December, bringing the annual total to 1,642. This represents

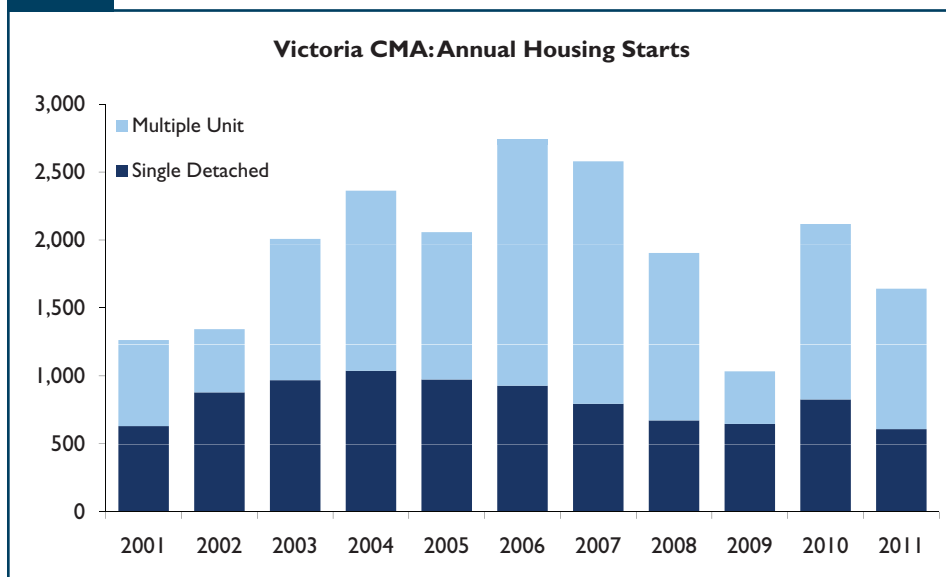

a decline from the 2,118 starts recorded in 2010, and is 15 per cent below the annual average recorded over the previous ten years (2001-2010 average: 1,941 starts).

The reduced pace of residential construction activity recorded in 2011 was observed in both the single detached and multiple unit segments of the market. The single detached market experienced the most

pronounced decline in activity relative to their long-term trend level, with starts 27 per cent below the ten-year annual average. Multiple unit starts were down seven per cent relative to the ten-year average level.

Despite fewer new housing starts, the number of units under construction remained stable over the course of the year – decreasing marginally from 1,887 homes in December 2010 to 1,880 through the end of 2011. While the number of homes under construction remained stable, there was a slight shift in the location of activity over the past year from the West Shore to the core and peninsula markets. The West Shore accounted for the majority of current residential construction activity (48 per cent), but relative to December 2010, activity has decreased from 1,017 units to 900. Activity in the core markets edged up to 807 units from 762 in December 2010, and construction activity in the peninsula markets increased from 108 units to 173.

The number of completed new homes absorbed (sold) in 2011 declined 14 per cent relative to 2010. Even though demand for newly built homes softened in 2011, the average and median new house prices in the Victoria CMA edged up 4.9 and 2.4 per cent, respectively. The City of Langford and the District of Saanich were the two strongest markets in terms of new single detached home sales in 2011, but varied considerably in terms of prices. The average 2011 new house price in Langford was \$560,015 – 35 per cent lower than the average price in Saanich.

## Resale Market: Fewer MLS® Sales and Increased Supply

During the fourth quarter of 2011, 1,238 MLS® sales were recorded in Victoria<sup>2</sup> – 13 per cent fewer than the ten-year historical average (2001-2010). Over the course of the year, 5,773 MLS® sales were recorded, the lowest annual total since 2000. This decline in the demand for existing homes came at a time when mortgage rates were near all-time lows in Canada, suggesting other factors have been dampening demand, including weaker than anticipated employment growth and interprovincial net migration.

Although demand was scaled back in 2011, the number of new listings edged up relative to both the 2010 level (up 1 per cent) and the historical ten-year average (up 20 per cent), providing more choice to potential home buyers. As a result of these diverging demand and supply conditions, the Victoria MLS® market was in buyers' market territory for most of 2011 and experienced a slight decrease (1.2 per cent) in the average annual MLS® price.

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
