Hamilton and Brantford CMAs

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: October 2012

New Home Market

Total housing starts declined in the third quarter

After strong performance in the previous three quarters, Hamilton Census Metropolitan Area (CMA) total housing starts declined in the third quarter of 2012 compared to the same quarter of last year. The decline was entirely due to

weaker construction activity in single-detached dwellings. This third quarter moderation marked the lowest quarterly number of total starts since the first quarter of 2011, when builders began construction of 294 units. Significant gains for semi-detached, row and apartment starts in the three months ending in September 2012 were not sufficient to completely offset the decline in single-detached starts.

On a sub-market basis, between July and September 2012, the City of Hamilton was responsible for all the semi-detached, row and apartment starts. In essence, during the third quarter of 2012, no higher-density construction occurred in Burlington or Grimsby. Within the City of Hamilton, the lion's share of the third quarter semi-detached and row starts was recorded in Stoney Creek while the new condominium apartments in Ancaster and Flamborough areas accounted for all the apartment starts. Nonetheless, single-detached starts declined across all sub-markets.

As in the Hamilton CMA, between July and September 2012, total housing starts decreased in the Brantford CMA. However, the apartment segment was completely responsible for the decline in Brantford's total housing starts. Given that residential construction activity was particularly strong in the first half of 2012, the weaker performance in the third quarter of 2012 can be seen as a return to historical levels. Single-detached housing starts, which are less volatile and therefore a better indicator of the trend in construction activity, remained relatively healthy with a year-to-date increase of four per cent in Hamilton and 31 per cent in Brantford.

Many of the forces which have bolstered townhouse starts in the Hamilton CMA this year, such as low mortgage rates and surging immigration of the first-time homebuyer age group (25-34), have produced similar results in the Brantford CMA. Townhouse starts in Brantford advanced by 19 units from the third

Figure 2

quarter of 2011. Given that resale homes were relatively in short supply coupled with the price differential between a single-detached home and a townhouse, more people looking to buy in Hamilton or Brantford have turned to new townhouses for their housing needs. If the current pace of housing construction is maintained to year-end, townhouse starts are expected to hit a record high in both Hamilton and Brantford CMAs.

Resale Market

Existing home sales down in the third quarter

According to the Realtors Association of Hamilton-Burlington (RAHB), the third quarter seasonally adjusted existing home sales were down from the second quarter of 2012. Following a marginal increase in the first three months of the year, Hamilton's existing home market showed signs of slowdown in the past six months. In early 2012, a few households decided to pull their home purchase forward

since they expected mortgage rates to increase. As a result, between April and September 2012, the Hamilton CMA saw lower sales activity. However, the expected interest rates hike did not materialize as the Bank of Canada held its benchmark rates unchanged due to the heightened global economic uncertainty. Nonetheless, at a seasonally adjusted level of 3,161 units, the third quarter sales can be seen as a return to more sustainable path and in line with the five-year quarterly average sales of approximately 3200 units.

Similar to conditions in the Hamilton CMA, the third quarter seasonally adjusted existing home sales in the Brantford CMA declined from the previous quarter. In fact, the third quarter decrease represents a fourth consecutive quarterly decline in sales activity in the area. Although the changes to mortgage insurance rules which came into effect in July will enhance long-term stability of the housing market, some first-time buyers may have decided to postpone

their purchase which was a factor dampening existing home sales in the third quarter of 2012.

On a sub-market basis, the weakness in sales activity in September 2012 occurred across all areas, with the exception of Dundas and Grimsby where sales increased at a double-digit rate from September 2011. The resale market condition in Dundas was firmly entrenched in sellers' territory. Given that sellers had more bargaining power in Dundas, it took only 34 days for the average home to be sold in September 2012, down significantly from the 59 days recorded in September 2011. In comparison, it took longer for an average home to be sold in Ancaster, Stoney Creek and Gleenbrook which highlighted the steep declines in sales activity in these areas. With respect to growth in the average price, Grimsby posted the most price gain in September 2012 compared to the same month last year.

Slow average resale price growth

In the third quarter of 2012, the seasonally adjusted existing home average price in the Hamilton CMA increased very slowly from the second quarter of 2012 as the amount of new supply (measured by the level of new listings) outpaced the number of sales. The modest gain in average resale price was considered a relief for potential buyers as homeownership affordability slightly improved. On a year-over-year basis, however, the unadjusted existing home average price advanced eight per cent from the third quarter of 2011.

Figure 3

Following five consecutive quarterly declines, the seasonally adjusted existing home new listings in Hamilton inched up one per cent in the second quarter and three per cent in the third quarter of 2012. As a consequence, the number of new listings reached its highest level since the third quarter of 2011. Essentially, between July and September 2012, more sellers listed their properties which resulted in resale homes being

on the market for a bit longer than the previous quarter. More specifically, the number of new listings on the resale market in the third quarter represented a five-month of supply at the September sales pace, up from a four-month supply in the same quarter a year earlier.

Figure 4

Hamilton CMA Attracts Younger Migrants

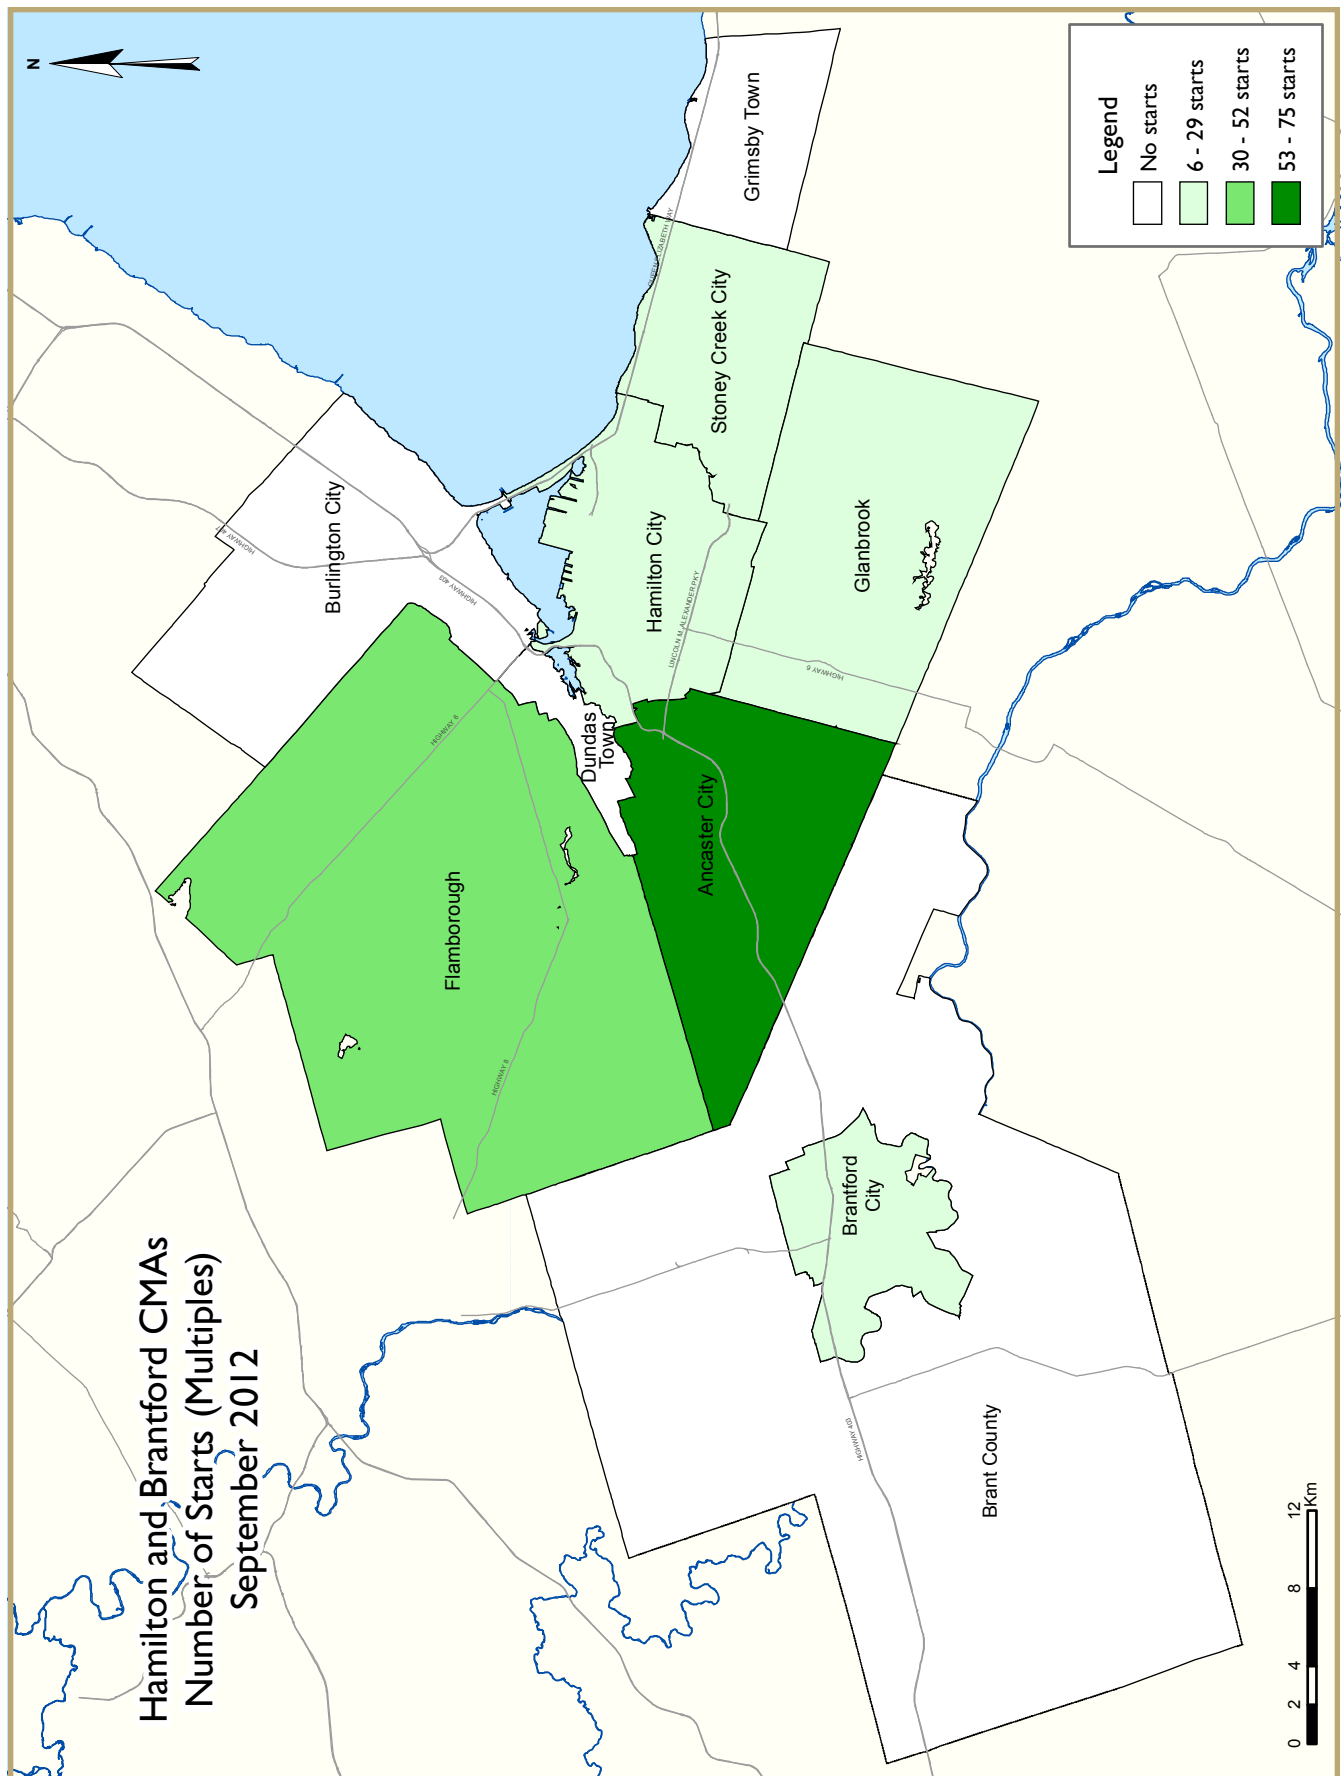

According to recent data released by Statistics Canada, between 2006 and 2011 on a net basis the number of migrants to the Hamilton CMA increased by approximately 26 per cent for the 25 to 44 age group. Some of these migrants came from the Greater Toronto Area (GTA). The homebuyer life cycle analysis indicates that the 25-44 age group accounts for a higher proportion of first-time buyers. As well this age group is more sensitive to home price fluctuation. Therefore, the house price differential between the GTA and the Hamilton CMA provides enough incentive for some people, particularly first-time homebuyers, to migrate from the GTA into Hamilton.

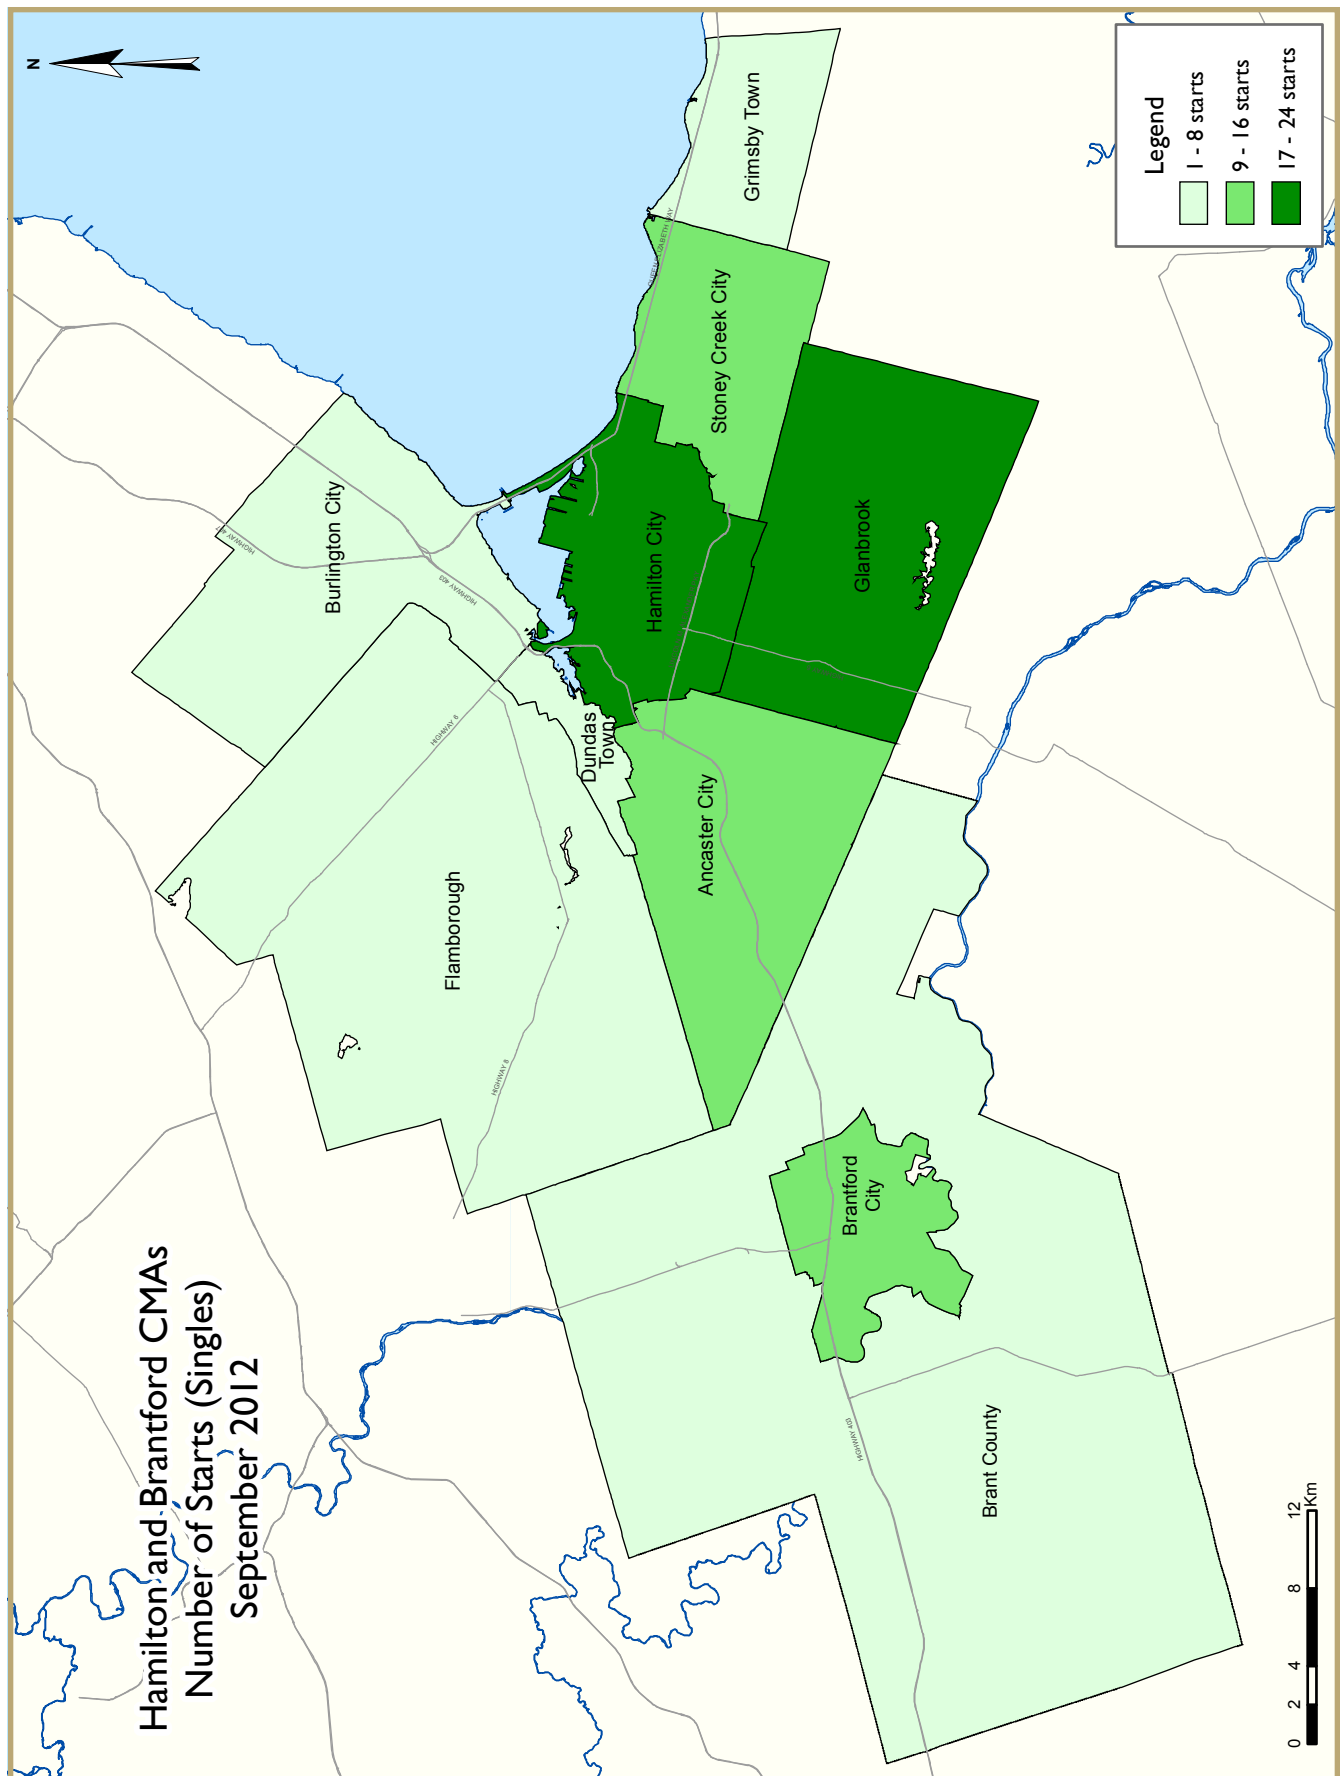

Put into perspective, as of September 2012, the average existing home price in the GTA cost \$504,000. In comparison, as of the same month in 2012, the average existing home price in the Hamilton CMA cost \$360,000 which translates into a gap of \$144,000. Given the ease

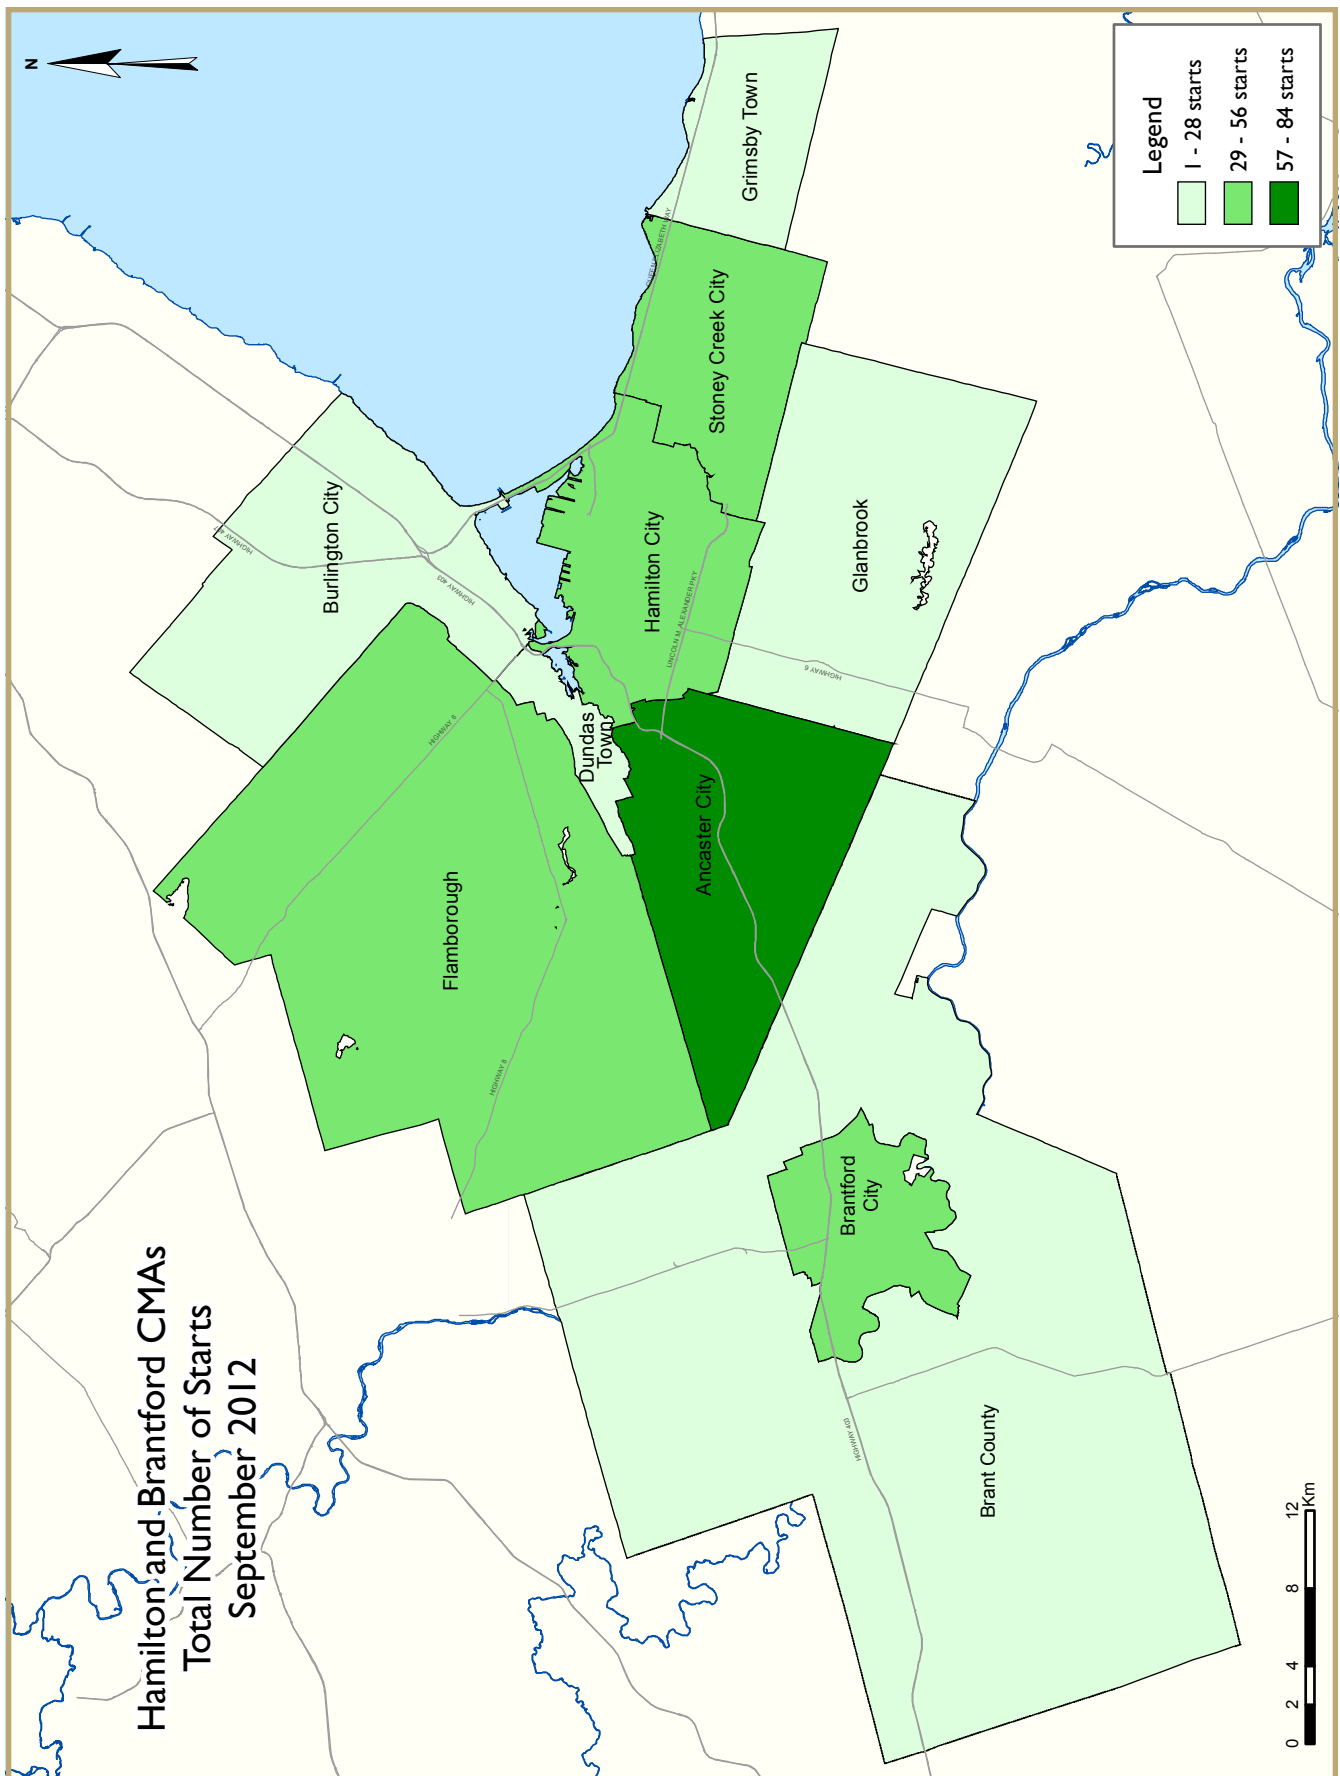

with which some people commute from Hamilton to Toronto for work, the price gap between the two areas will remain an influential factor for potential homebuyers. Essentially, with immigration as the main source of population growth across Canada, the influx of migrants to Hamilton will continue to support a healthy housing market activity in the area.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
