

# HOUSING NOW

## Kingston CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fourth Quarter 2012

### New Home Market

#### Total housing starts up in the third quarter

Following two consecutive quarterly declines, Kingston Census Metropolitan Area (CMA) total housing starts increased significantly between July and September 2012. At 428 units, total housing starts recorded their highest third quarter levels since 2006 when developers started construction on 430 units. The

strong third quarter performance in total housing starts was predominantly due to expansion in rental apartment construction.

In contrast, single-detached housing starts, which are less volatile and therefore a better indicator of trend in construction activity, declined slightly from the level tallied between July and September 2011. The third quarter drop in single-detached starts represents two consecutive quarterly declines – highlighting the shift in

demand towards less expensive dwellings such as condominium apartments and townhouses.

On a sub-market basis, housing starts for all dwelling types were up in the City of Kingston. In fact, between July and September 2012, Kingston City accounted for all apartment starts – a direct response to the low vacancy rates in the downtown area. In the Frontenac Islands and the South Frontenac Township no construction activity occurred for semi-detached, row or apartment units. Meanwhile, the Loyalist Township registered a year-over-year decline in single-detached and row starts.

### Second highest quarterly apartment starts on record

After a weak performance in the first six months of 2012, apartment construction increased to 299 units between July and September 2012. The third quarter growth marked the second highest quarterly number of apartment starts on record. The highest apartment starts was recorded in the second quarter of 1991, when developers began construction on 348 units. On the demand side, improved economic conditions for young adults may encourage more potential renters to form individual households, which in turn put downward pressure on the average rental vacancy rate. Another factor supporting rental demand is Kingston's immigration story.

According to the recent census data released by Statistics Canada, between 2006 and 2011, international migration was the second major source of Kingston's population growth. More specifically, approximately a

thousand new immigrants came to Kingston in the past five years. A higher inflow of migrants increases the number of people requiring housing accommodations. Immigrants tend to lack the credit history and savings to jump into ownership housing and typically move into rental accommodation upon arriving in Canada.

## Resale Market

### Existing home sales recovered in the third quarter

According to the Kingston & Area Real Estate Association (KREA), the third quarter seasonally adjusted MLS® sales were up four per cent, following a double-digit decline in the second quarter of 2012. The rebound in sales activity this third quarter underscores the notion that Kingston's housing market remains relatively healthy. Compared with other major markets across Canada, the new mortgage rules, which took

effect on July 9, 2012, did not have a pronounced effect on the housing market in Kingston. However, it should be emphasized that the new mortgage rules are considered one of many factors influencing the housing market. Other factors include the overall strength of the economy, employment and expected changes in mortgage rates.

As such, between July and September 2012, several factors contributed to the resilience in Kingston's housing market activity. First, the annual average existing home price in Kingston had grown by single-digit since 2006, which means homeownership remains more affordable relative to other major centres in Ontario. Second, on a year-over-year basis, full-time employment in Kingston has increased consistently since February 2011. Despite a modest performance in September, the consecutive monthly gains in full-time employment suggest that businesses still have confidence in Kingston's economic recovery.

Figure 2

## **First-time homebuyers boosted sales**

Between July and September 2012, the number of townhouses sold on the resale market increased by eight per cent from the same period in 2011. The third quarter strength represents seven consecutive quarterly increases in townhouse sales. Given that most townhouses sell for less than \$250,000 in Kingston, this type of ownership housing has become a more affordable entry point for first-time buyers. In essence, the price gap between a single-detached and a townhouse had widened in recent years. Typically, first-time buyers are more sensitive to house price fluctuation. As a result, many first-time buyers have opted for townhouses, which are less expensive compared to the pricier single-detached dwellings. Consequently, the number of existing single-detached homes, which were

sold on the resale market declined in the third quarter 2012, compared to the same quarter a year earlier. In accordance with the lower number of sales activity in the third quarter of 2012, it took 59 days for an average single-detached home to be sold on the existing home market. In comparison, it took only 32 days for the average townhouse to be sold in the third quarter 2012.

## **Average price growth due to compositional effect**

The third quarter seasonally adjusted existing home average price in Kingston declined modestly from the second quarter of 2012. The lower single-detached sales in the third quarter pulled down the average existing home price in Kingston. Essentially, the strong townhouse sales recorded between July and September was not enough to sway the average price growth across the Kingston

CMA. Clearly, the third quarter average price growth indicated a compositional effect.

Generally, fewer single-detached sales would translate into slower average price growth, as these types of dwellings are considered more expensive relative to townhouses. Nevertheless, on a year-over-year basis, the existing home average price in the third quarter 2012 increased by three per cent compared to the same quarter last year. Although at a moderate pace, on a year-over-year basis, Kingston's average existing home price has been growing consistently since the first quarter of 2011 – indicating that the local housing market is relatively stable.

## Kingston Attracts More People from the Smaller Centres in Ontario

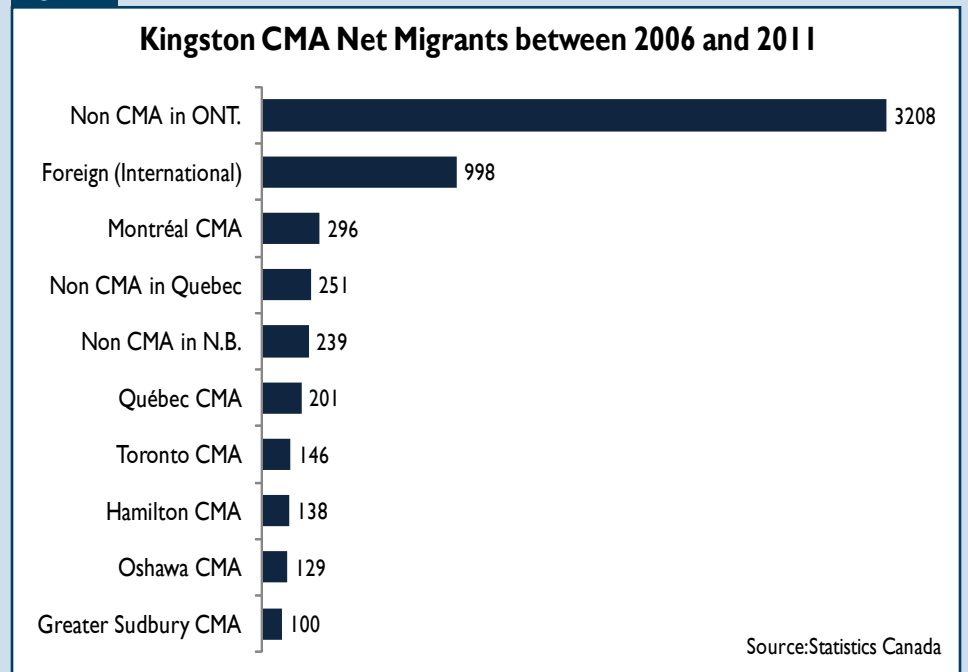

According to the most recent data released by Statistics Canada, between 2006 and 2011, Kingston attracted more people from the smaller centres than major areas.

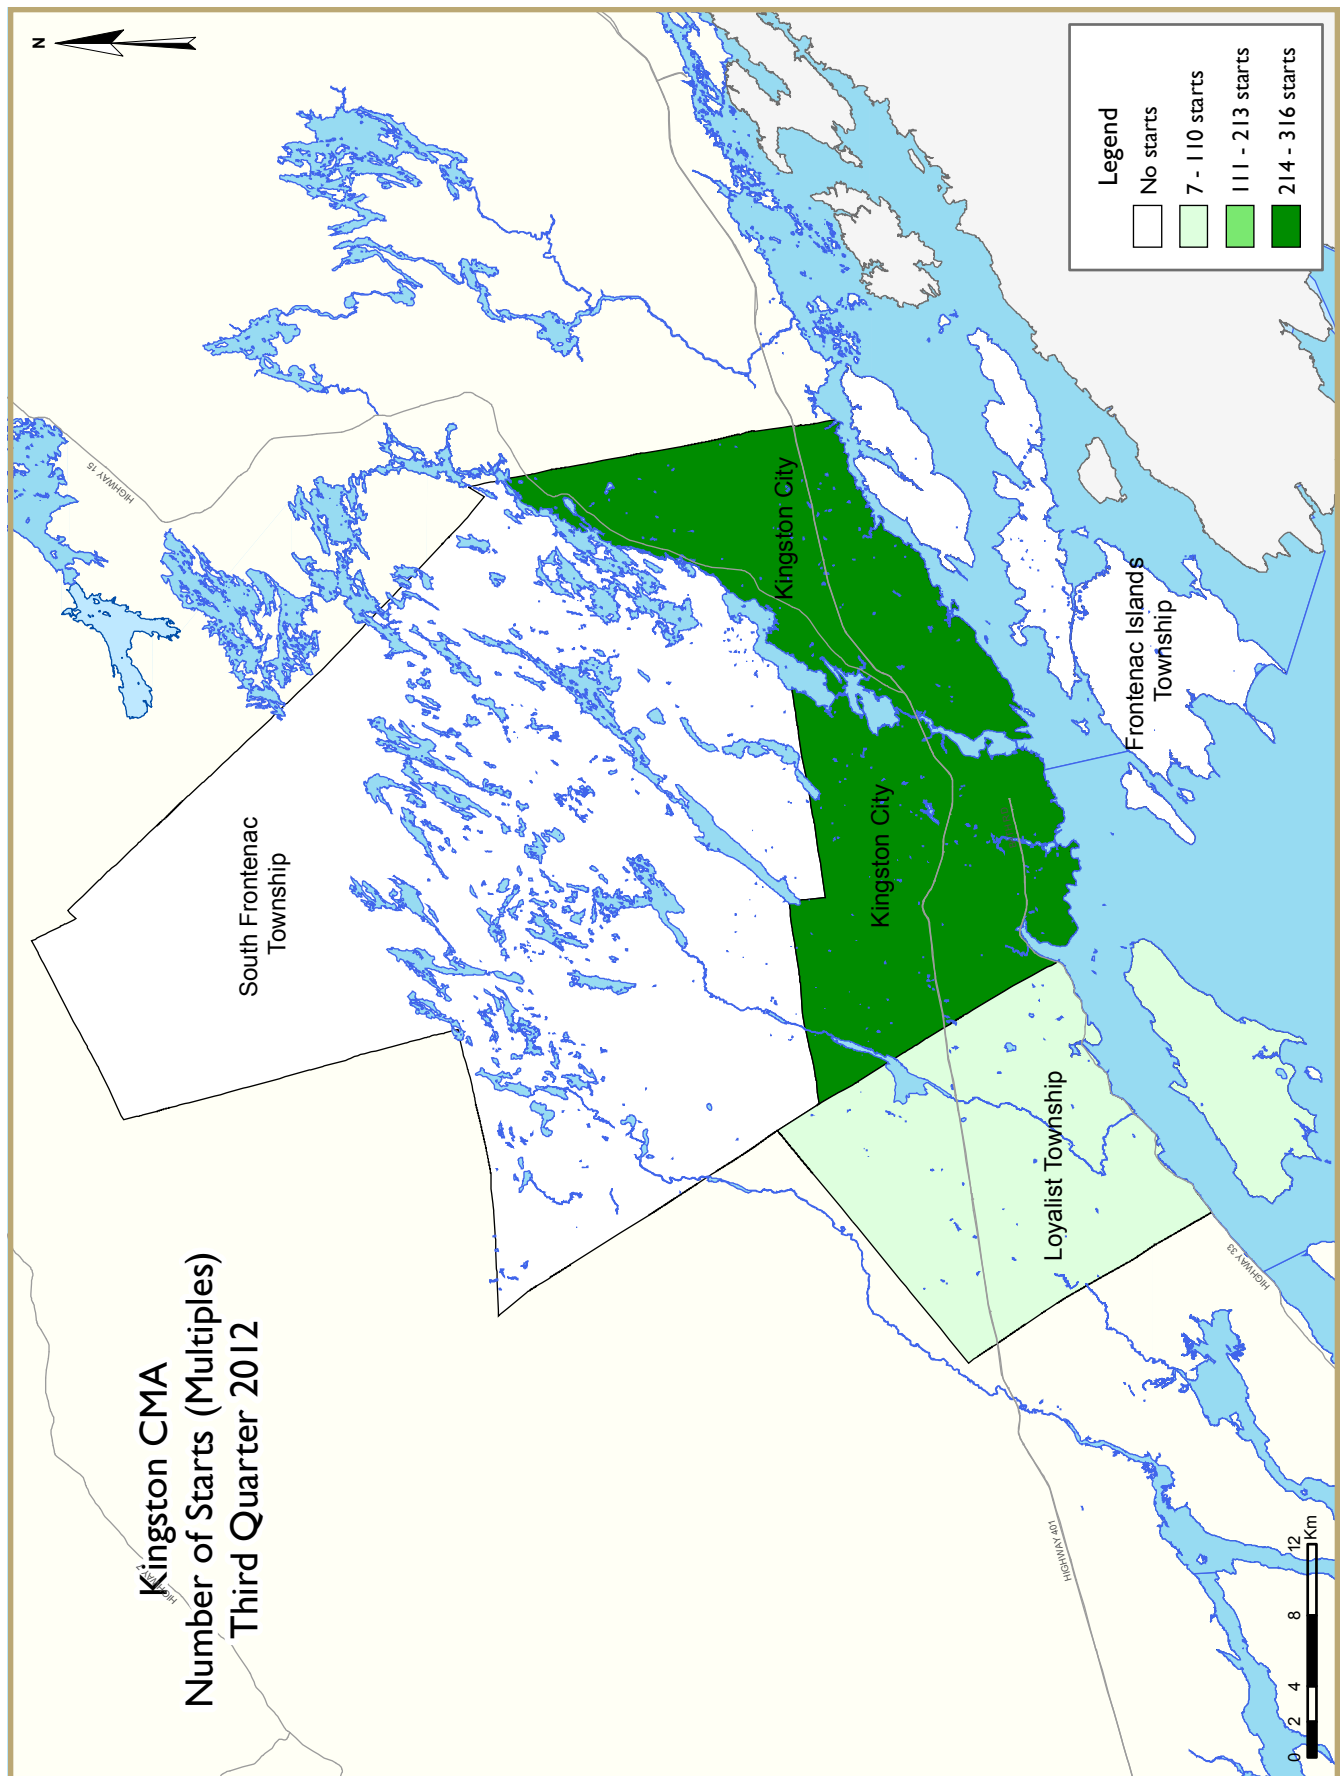

As well, during the same five-year period, on a net basis the number of migrants to the Kingston CMA increased significantly for the 45 to 64 age group. Evidently, as one of the best places to live in Canada, many retirees are coming to Kingston to enjoy a modest urban lifestyle.

Given that many seniors prefer to age in place in familiar surroundings, this will mean increasing demand for homes that can be easily adapted to meet life's changing needs as new seniors migrating into Kingston will seek a more supportive, maintenance-free lifestyle. As such, condominium apartment demand is benefitting from the growing

seniors' population, which was indicated by the surge in apartment starts during the third quarter of 2012.

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
