Ontario Region

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Third Quarter 2012

Resale Market

Ontario home sales moderate in Second Quarter

Ontario existing home sales in the second quarter moved lower for the first time since this time last year. Sales peaked in March and weakened as the quarter came to a close. With the exception of Peterborough and Thunder Bay, all other major urban centres posted lower sales.

Declining mortgage rates enticed many prospective buyers into the housing market early this year. Also, unseasonably warm weather likely pulled demand forward into the early part of 2012. The decline in housing demand coincided with the resurfacing of global economic concerns related to growth in Europe and China. In fact, Ontario consumer attitudes and spending remained subdued in the second quarter.

Ontario home listings grew for a second consecutive quarter. Listings were boosted by strong growth in home prices in recent quarters. As a result, resale market conditions across the province were more accommodating for buyers with product choice outpacing demand. Based on the balance between demand and supply, Hamilton and Thunder Bay were the hottest markets in the second quarter. These are all markets challenged by a lack of listings or offer more inexpensive housing options relative to bordering metropolitan markets. Meanwhile, eastern and southwestern Ontario communities remained the coolest. Notable examples include Kingston, St Catharines-Niagara, and Windsor centres.

A more balanced market would support price growth generally in line with inflation. Ontario home prices grew by a five per cent annualized rate after growing by nearly three times that rate in the first quarter. However, price growth slowed more sharply near the tail end of the second quarter. Hamilton and Thunder Bay posted the strongest price growth in the second quarter while Kingston home prices failed to keep pace and moderated during the quarter. Meanwhile, Toronto home prices grew at the slowest rate in over two years during the second quarter.

Housing starts grew in the Second Quarter

Ontario residential construction activity grew for a second consecutive quarter. Ontario all area home starts rose to 81,800 SAAR units in the second quarter, up over 3.5 per cent from the first quarter. As was witnessed in the resale market, much

of this strength during the quarter came early with activity slowing as the quarter came to an end. Strength in construction was in the more inexpensive multi-family home sector which includes semi detached, row and apartment housing. Meanwhile, single detached construction posted only modest gains. Year to date Ontario housing starts to June are up 21 per cent from this time last year. High density communities such as Toronto, Hamilton and Ottawa have posted the strongest increases to date in 2012.

Apartment construction continues to drive multi-family construction activity in the second quarter, particularly in some larger metropolitan areas. Rising home prices and fewer lots available for low-rise construction supported demand for less expensive higher density housing. In addition, low interest rates, lower rental vacancy rates and less purpose-built rental construction enticed more investors into the marketplace and boosted investment demand for apartment units in the past few years. Some of

these units purchased in the past year are now commencing construction.

Single detached construction remained relatively stable in the second quarter. Single detached construction has been on a long term downtrend since 2003 owing to growth in less expensive housing options and less land available for residential development. Demographic trends over time suggest an ageing population and smaller households are less supportive of new detached construction. Land constraints, demographic trends and the rising cost of housing will likely temper any notable growth in single detached construction over the next few years.

The Ontario new home price index has trended higher in 2012. New home prices continue to grow in excess of inflation. On the demand side, stronger housing starts combined with rising home prices enabled builders to raise prices.

Figure 2

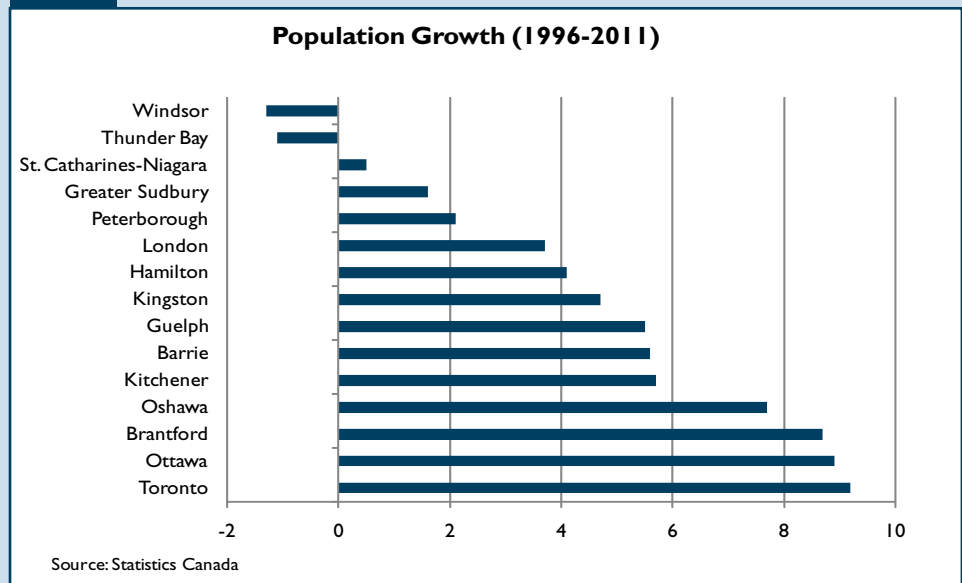

Larger Urban Centres Post Stronger Population Growth Since 2006

Toronto and Ottawa have succeeded in growing their share of Ontario residential construction activity over the past decade. Alternatively, smaller centres such as Thunder Bay and Windsor have seen their share of construction activity slow. Economic and demographic considerations were at play here. Thunder Bay and Windsor are two economies traditionally tied to the goods sector. These economies have gone through a restructuring phase as a result of a high Canadian dollar and growing global competition in the forest product and auto sectors. Slower job growth in these communities discouraged in-migration. This resulted in more subdued housing activity versus activity in Toronto and Ottawa urban centres whose economies have been tied to growing sectors such as financial services, real estate and the public sector in recent years. In fact, census population counts recently released by Statistics Canada indicated that Toronto and Ottawa populations grew the fastest among Ontario urban centres in recent years - helping

support housing demand. Meanwhile Windsor and Thunder Bay were the only CMAs in Canada to post declining population counts over the same period. However, in more recent years, efforts to diversify the local economy has helped support job growth, higher migration levels and housing demand in both Thunder Bay and Windsor.

"P & I" means Principal and Interest (assumes \$100,000 mortgage amortized over 25 years using current 5 year interest rate)

"NHPI" means New Housing Price Index

"CPI" means Consumer Price Index

"SA" means Seasonally Adjusted

(1) Growth year over year expressed in percentage

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
