#### HOUSING MARKET INFORMATION

# HOUSING NOW Greater Sudbury CMA

#### Date Released: First Quarter 2012

#### **New Home Market**

#### 2011 Sudbury Total Starts Achieve Highest Level Since 1994

Greater Sudbury total housing starts in 2011 tallied the highest level since 1994. While the bulk of the 595 Greater Sudbury starts were single-detached units (321), an additional 274 units were higher density starts comprised of semi-detached, row, apartment and condominium starts.

The 274 multi-family starts were the highest number of starts of this type in almost 20 years.

Employment in Greater Sudbury grew in the fourth quarter and the year in total, supporting the housing demand. Despite the backdrop of a decelerating global economy, employment in both the 25-44 and 45-64 age groups has been trending up. Job numbers for the year finished up by 2.1 per cent.

Nevertheless, as prices for new single-detached homes escalate, Sudbury's builders are responding by constructing smaller units with an eye towards attracting cost-conscious consumers. Additionally, a relatively low vacancy rate and relatively high homeownership housing prices have prompted more construction of medium to high density housing units.

Highlighting the increased multi-family housing numbers were forty semidetached units, up from four last year and nearly double the number of row units to 54 units. Contrasting this growth, single-detached homes declined in 2011 to their five-year average, down by 26 per cent from the level achieved the previous year.

Furthermore, the fourth quarter single-detached homes total was the lowest in Greater Sudbury since 2001. The eighty single-detached units started in the fourth quarter closed out a slightly below average year. Rapidly rising home prices in Sudbury have curbed single family housing demand.

The 321 single-detached units built in 2011 were spread around the Census Metropolitan Area with almost 40 per cent being built in the City while over one quarter were constructed in Valley East. Rayside-Balfour, Nickel Centre and Walden accounted for the remainder construction.

In Timmins, single-detached starts reached a 21 per cent increase from last year. Sault Ste. Marie single-detached home construction activity edged down from 2010 by almost 8 per cent to 95 units. Finally, North Bay's 100 singles starts were the weakest since 2001.

Despite the fact that in 2011 absorptions of completed homes were up in Greater Sudbury, the

fourth quarter absorptions in all three markets were down or equal that of 2010. Average prices for absorbed new single-detached units in each of Sudbury, Sault Ste. Marie, and North Bay reached a level over \$350,000. Worthy of note is that the 2011 average absorbed price in North Bay was almost 8 percent higher than the three Northeastern Ontario centres tracked.

#### **Resale Market**

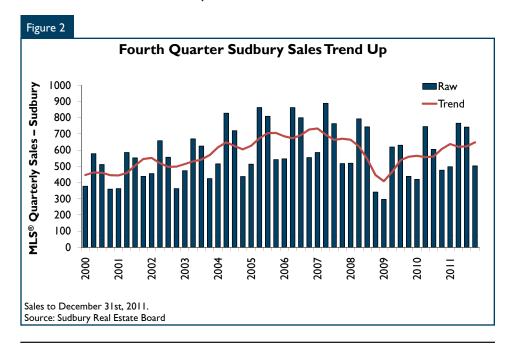

### Sudbury Resale Market Post Strong Sales Gains in 2011

For the second consecutive year, the Sudbury resale market posted double-digit sales gains compared to the previous year. Low interest rates and strong employment numbers are key reasons for the increased sales in 2011. Additionally, Sudbury average weekly earnings grew more strongly than the Ontario average in 2011. Sudbury wages grew 2.9 per cent compared to 2.6 per cent for Ontario. The combination of full time job

increases and stronger than average income growth provided good support for housing demand in 2011.

Sales ended the year up almost 12 per cent resulting mainly from a busy June to October period in the Sudbury existing home market. Although new listings fell significantly in the first four months of 2011, they stabilized since, ending the year off 6.8 per cent from 2010. As a result, the sales to new listings ratio rose in 2011 but remained classified as balanced. This resulted in average prices rising but only by 3.5 per cent in 2011 after gaining over ten per cent on average in 2010.

In Timmins Real Estate Board territory, sales reached an all-time record in 2011. North Bay sales finished well behind their ten-year average, while Sault Ste. Marie sales posted levels stronger than the last two years. Price gains were strongest in Sault Ste Marie, followed by North Bay and Timmins. Average house prices ranged

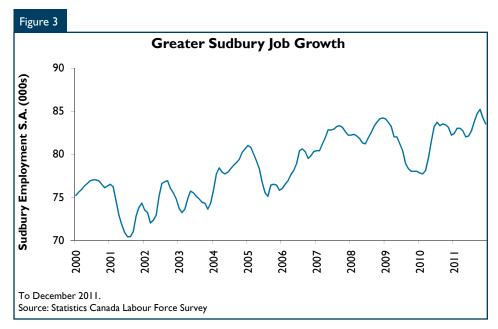

<sup>\*</sup> MLS® is a registered trademark of the Canadian Real Estate Association (CREA).

between \$140,000 and \$220,000 in these three markets with North Bay posting the highest average price of the three centres.

#### **Sudbury Employment Finished** Strong in 2011

The services sector was key to the job gains in the 2011 while the goods-producing sector trended up as well. After some declines in 2009, the 15-24 age group has seen employment level off over the past 18 months. Full-time job growth has led part-time growth since the conclusion of the recent labour unrest in mid 2010.

Despite encouraging employment numbers, Sudbury's labour force actually fell in 2011 causing the unemployment rate to fall dramatically from 9.3 per cent in

2010 to 6.8 per cent in 2011. Job seekers did not rush to register in the labour force, so as employment rose, the unemployment rate fell throughout the year. The December

2011 unemployment rate concluded the year sitting at 5.0 per cent.

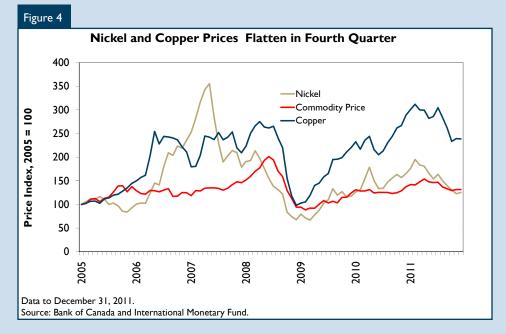

#### **Global Headwinds Stall Copper and Nickel Price Growth**

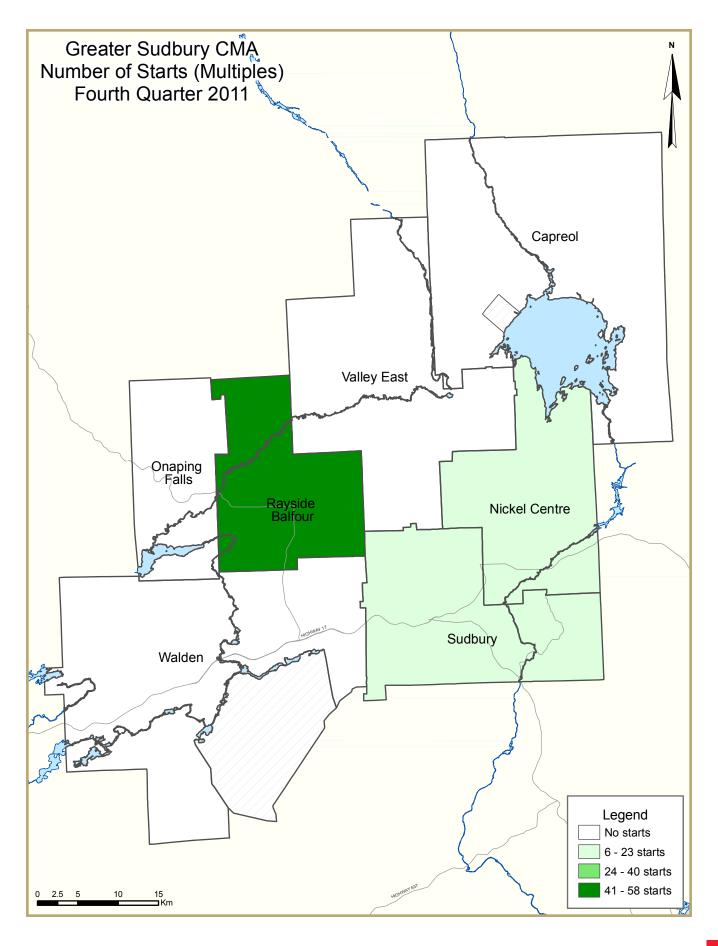

For the first nine months of 2011, it appeared that Sudbury's key commodities, copper and nickel were going to have another exemplary year with solid price gains compared to 2010. When the summer ended, nickel prices hit negative price growth on a year-over-year basis, followed by copper.

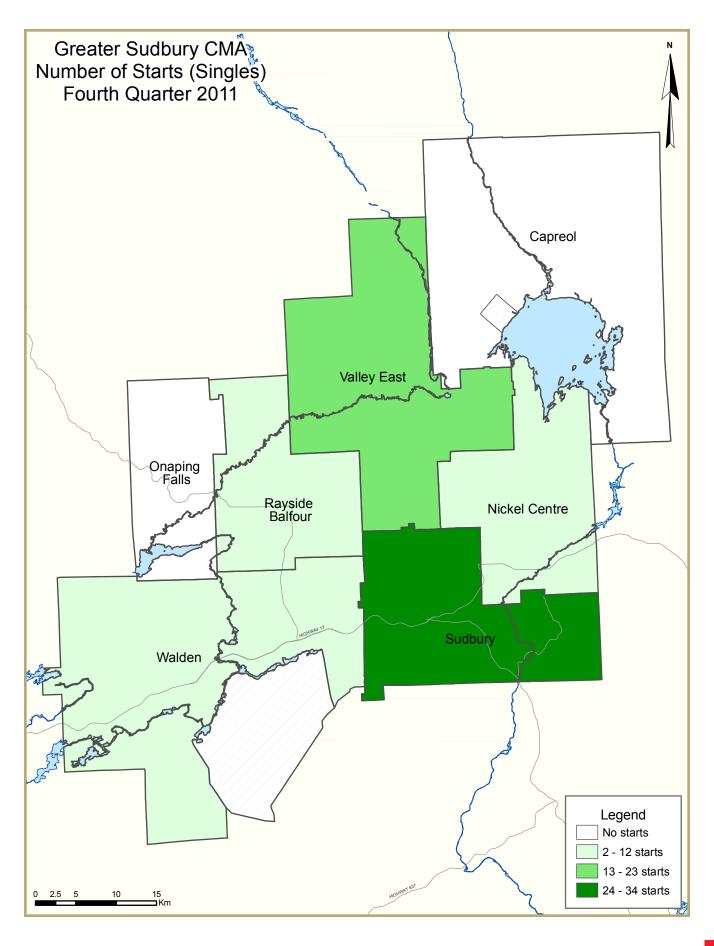

forward which will greatly bolster the local economy. Meeting the demand for employees for all the mining related growth and development will be one of the biggest challenges for Sudbury and the mining sector in general.

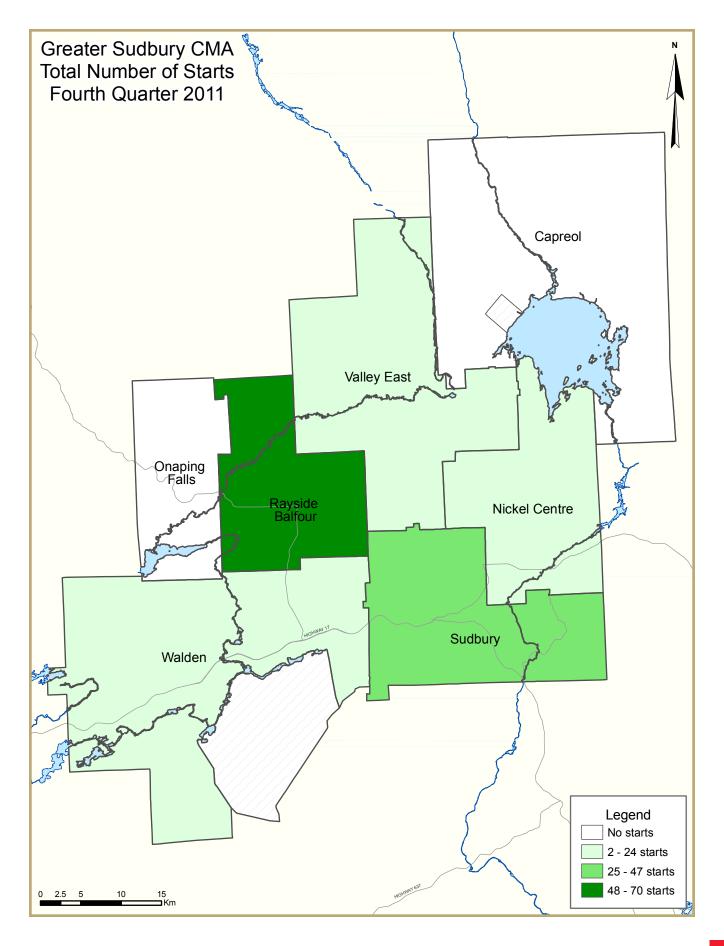

All told, price growth for both commodities was still positive for 2011. However, increasing uncertainty will minimize price growth for these two commodities until at least the second half of 2012. The extent to which the economies of developing nations weather the challenges facing the global economy, will determine the performance of these commodities, which are integral in supporting the construction and manufacturing sectors.

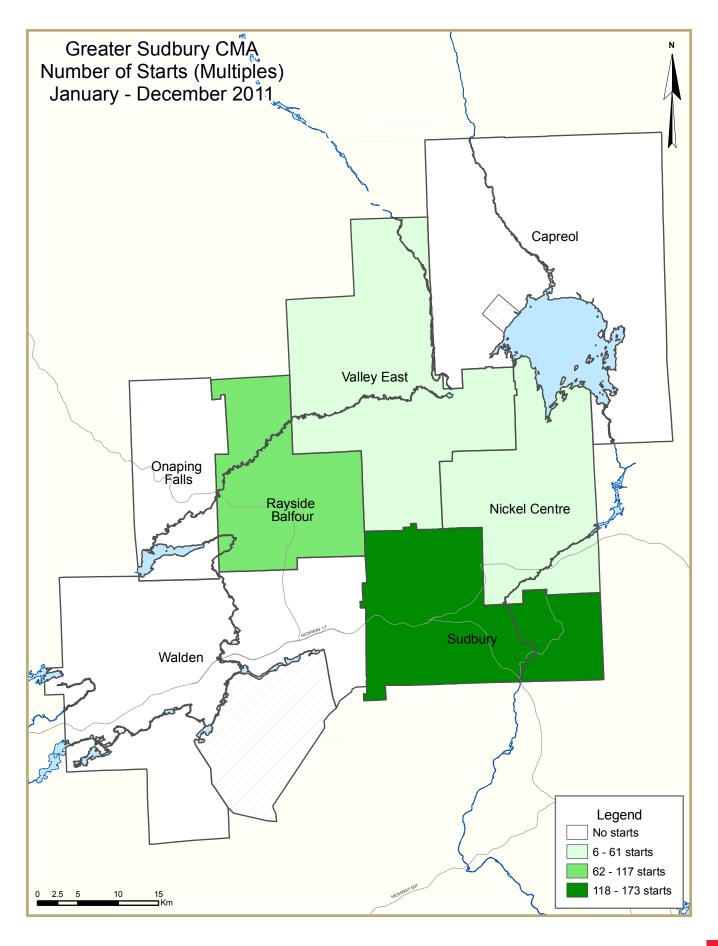

Nonetheless, mining related investments in the Greater Sudbury area are moving

<sup>&</sup>quot;NHPI" means New Housing Price Index

<sup>&</sup>quot;CPI" means Consumer Price Index

<sup>&</sup>quot;SA" means Seasonally Adjusted

#### **METHODOLOGY**

#### **Starts & Completions Survey Methodology**

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

#### **Market Absorption Survey Methodology**

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

#### **DWELLING TYPES:**

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "**Apartment and other**" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

#### INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

#### GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

#### CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.

#### 2011 CANADIAN HOUSING OBSERVER, with a feature on Housing Finance

National, regional and local in perspective with insightful online data resources, the *Canadian Housing Observer* presents a detailed annual review of housing conditions and trends in Canada. New this year is the launch of additional online interactive tables featuring housing data at the local level for more than 100 selected municipalities.
