Thunder Bay CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Second Quarter 2012

New Home Market

First quarter housing starts trend down despite mild winter

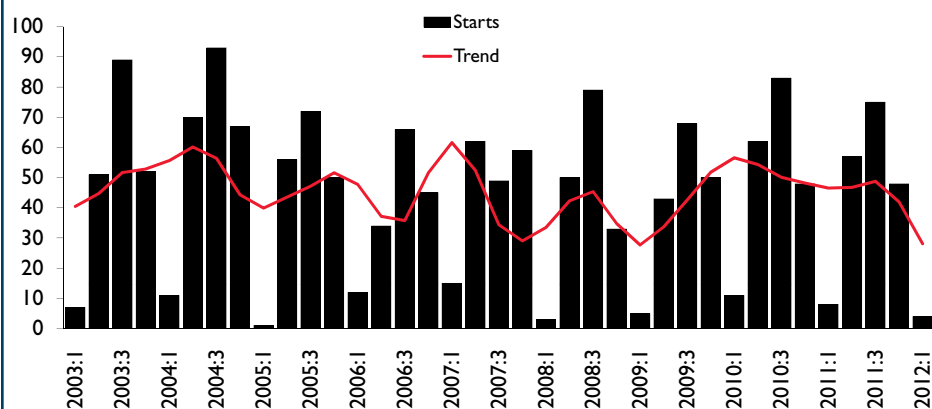

Thunder Bay's new home construction market weakened in the first quarter despite an unseasonably warm winter. The four single-detached starts were half of the average for the last five first quarters of 8.4 units. Fundamental variables supporting the construction market suggest this dearth of

new building will be a short term phenomenon.

Although job growth has been subdued over the last three years in Thunder Bay, it has shown positive year-over-year gains in the last five consecutive months. As of the March Labour Force Survey data, Thunder Bay employment is up 4.5 per cent compared to March 2011. Finally, low mortgage rates persisted in the first quarter, providing positive incentives for potential homebuyers.

Figure 2

Given the fact there have been only marginal gains to the New House Price Index for Thunder Bay over the last three years, building material costs have been relatively flat due to only slight price rises in dimensional lumber and sheeting costs. However other construction costs, such as land and labour, have increased.

The number of completed and unoccupied units is within the average range witnessed over the last ten years; observing very few units built that are not pre-sold or owner-built. Absorption in the first quarter totalled 17 units, up from nine units last year in for this same period, being primarily in price ranges over \$300,000. Approximately 65 per cent of the 17 units absorbed were above \$300,000. The average price of an occupied new single-detached unit in the first quarter was \$330,500.

Multi-family starts cool in first quarter

Low mortgage rates and a tightening resale market contributed to create the most significant construction story in Thunder Bay in 2011. Two projects totalling 160 units started last year contrasted the lack of multi-family starts so far in 2012. Given the shortage of resale market listings, planned completion of any of these projects should somewhat relieve pressure on the market.

Resale Market

Thunder bay resale market posts weaker volumes but strong price gains

A mild winter could not reverse a common theme present in Thunder Bay. The resale market continues to tighten further with limited supply being the biggest reason for strong price gains being recorded, amidst continued sellers' market conditions. The 255 MLS® sales in the January to March period were the lowest tally counted

in the last 17 first quarters dating back to 1995. Despite the weaker volumes, average prices leaped ahead 15.8 per cent given the low listings volumes. The average price of all sales in the first quarter was nearly \$175,000.

Several positive stories seemed to be unfolding in Thunder Bay. First, five consecutive months of job gains with the strongest gains coming in the first quarter marked a great start to the year, after three and a half years of mediocre performance. The encouraging employment numbers

Figure 3

Data to March 2012.
Source: Statistics Canada Labour Force Survey.

finally supported anecdotal evidence that jobs were being created in the knowledge based economy locally. Part of this positive spin is that mining activity is on the increase in the City.

Second, sales will be bolstered, given a seven per cent rise in employment in the first quarter. The labour force has not risen to keep pace with employment gains which have caused the unemployment rate to fall, often

a precursor to in-migration and, therefore, household formation.

Third, notable gains in both 15-24 and 25-44 age group employment mirrors some improved migration results that showed significant in-migration in the 2009-10 period into Thunder Bay. These events should bolster demand from first-time and move-up homebuyers.

Finally, although known for its volatility, the recent trend of full-time job growth

is positive leaving one to conclude that the evolution of the Thunder Bay job market has not been characterized by part-time job growth outstripping full-time. Recent comparisons suggest that the split between full-time and part-time work has been essentially unchanged in the last ten years.

Classic Seller's Market Conditions

Several indicators clearly point to continued seller's market conditions in Thunder Bay as we enter the spring selling season. Listings shortages continue to be the primary resale market story. Bidding wars continue to be present and sales occurring at or above list price are becoming more common place.

Active listings averaged 167 units in the first quarter of 2012, down two units from the last year's first quarter. As expected, this all-time low for MLS® listings causes frenetic interest in any new listings that do come on the market. Bidding wars continue leading to a higher percentage of homes selling at or above list price.

The average sell to list price ratio and monitoring sales at or above list price have become key indices of the state of the market. So far, the first quarter shows tightening to 98.7 per cent sell to list price ratio compared to 98.0 per cent in the first quarter of 2011. Furthermore, 41 per cent of homes sold at or over list price in the first quarter, up from 35 per cent last year in the first quarter.

Nevertheless, average selling time is moving slightly out of step as average days on market actually rose in the first quarter. After taking an average of 43 days to sell a home in Thunder Bay in the first three months of 2011, selling time rose to 51 days in the first quarter this year.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
