Date Released: October 2012

New Home Market

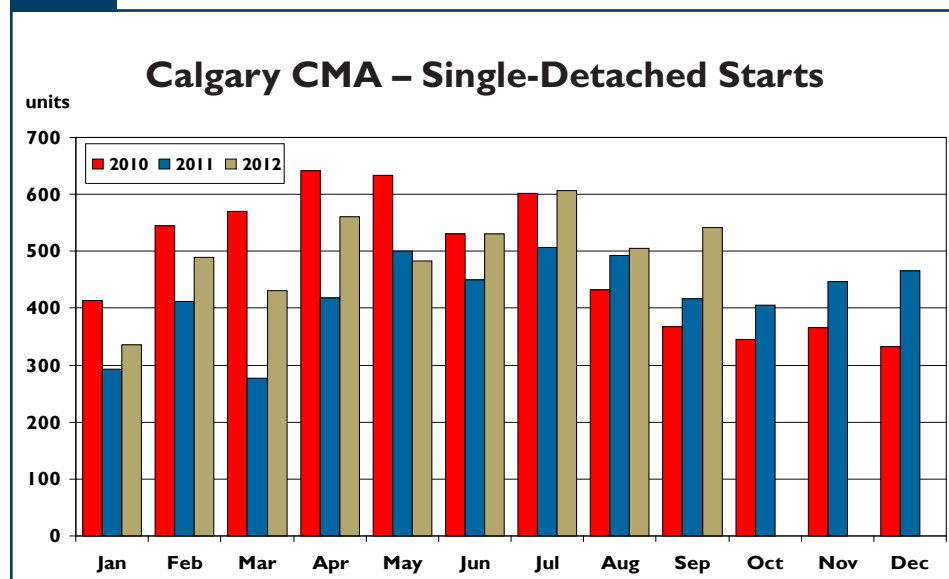

Calgary housing starts increase in September

Housing starts in the Calgary Census Metropolitan Area (CMA) totalled 1,012 units in September 2012, up 25 per cent from 810 units in September 2011. With September's tally, there have been more housing starts in the first nine months of 2012 than in all

of 2011. Year-to-date, housing starts totalled 10,005, up 60 per cent from the same period in 2011.

Single-detached starts in the Calgary CMA reached 541 units in September, up 30 per cent from the previous year. After three quarters, single-detached starts in the Calgary CMA rose 19 per cent to 4,482 units compared to 3,767 units in 2011. A majority of the starts took place in the City of Calgary,

Source: CMHC

with gains over the previous year. However, demand for new homes has not been limited to the City of Calgary as starts have also increased in some of the smaller centres within the CMA. For instance, to the end of September, single-detached starts had risen in Airdrie, Chestermere Lake, Cochrane, and Rocky View County with a combined total of 1,019 units, up 13 per cent from 2011.

The inventory of complete and unabsorbed single-detached units in September was 482, up 11 per cent from 434 units in September 2011. The increase was mainly due to a rise in the number of spec units in the market. Spec homes were at 174 units in September up 30 per cent from a year earlier while show homes only increased three per cent to 308 units. Single-detached inventories also rose from the previous month by 25 units. There were 535 units completed in September compared to 510 absorbed.

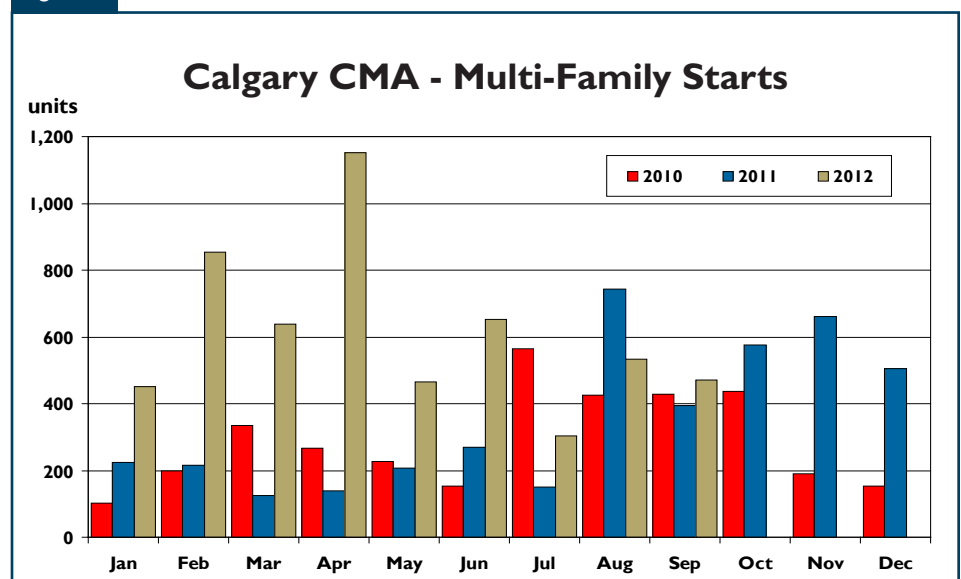

The average absorbed price for single-detached units in September was \$586,736, up 13 per cent from \$517,098 in 2011. The year-over-year

gain in prices was pronounced due to the higher proportion of homes absorbed in the highest price range. The proportion of homes absorbed at \$650,000 and higher increased from 15 per cent in September 2011 to 26 per cent in September 2012. To the end of September, the absorbed price averaged \$571,997, up six per cent from the previous year.

Multi-family starts, which include semi-detached units, rows and apartments, totalled 471 units in September, up 20 per cent from a year earlier. The gain was due to more semi-detached and row units breaking ground, with the combined total increasing 52 per cent to 274 units. Apartment starts were slightly down from the previous year reaching 197 units. All of the apartment units that started were in the City of Calgary with 132 units intended for the rental market. After nine months, multi-family starts reached 5,523 units, more than doubling the activity in 2011.

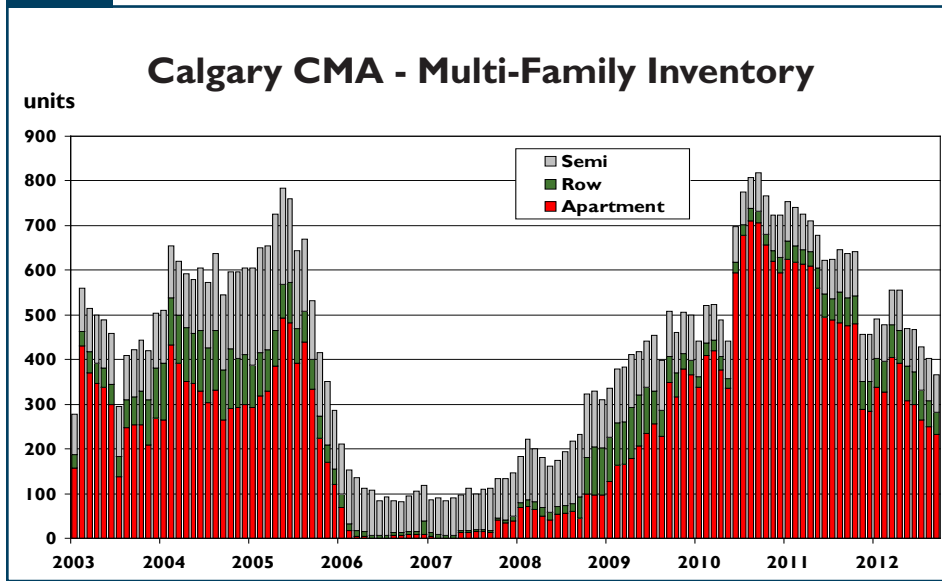

There were 235 multi-family units completed in September, down seven per cent from 254 units in 2011. The decline was due to fewer semi-detached and apartment units finishing construction while row units were up from the previous year. Of the 235 units completed, 88 were apartment rental units designated for social housing. Absorptions of multi-family units in September declined 28 per cent from 257 units in 2011 to 184 units in 2012. Despite the decline, absorptions in September

Figure 3

Source: CMHC

Figure 4

Source: CMHC

were still higher than the 147 units completed for market housing, moving inventories lower. Multi-family inventories were at 366 units in September, a decrease of nine per cent from August and down 43 per cent from the previous year.

Resale Market

Average price slightly increase from 2011 levels

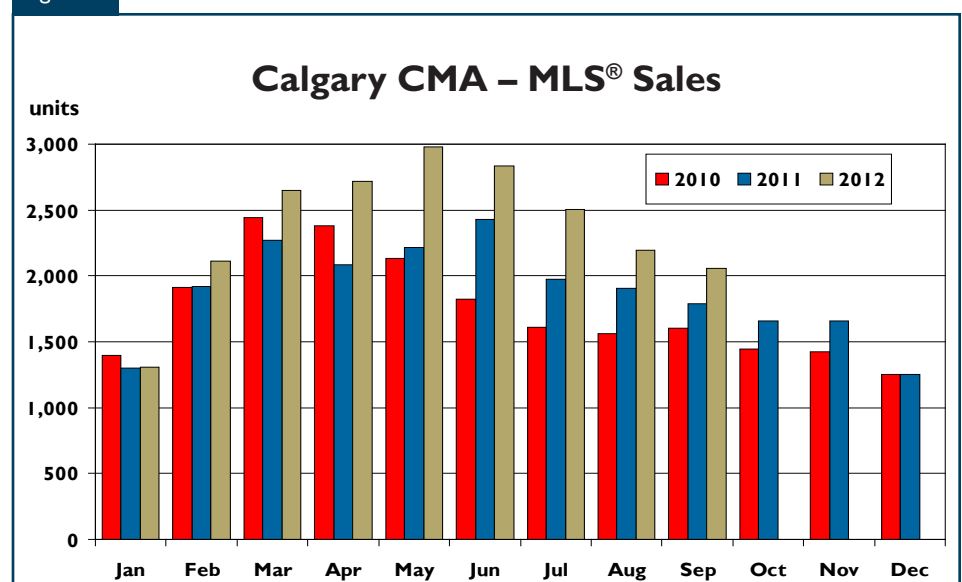

MLS® residential sales in Calgary increased 19 per cent to 6,754 transactions in the third quarter, up from 5,671 units in 2011. Full-time job growth, strong migration and higher income levels have contributed to the increase in 2012. Although resale activity has been elevated, the pace of sales has started to show some signs of moderation as sales in the third quarter, on a seasonally adjusted basis, were slightly down from the previous quarter. Despite the decline, sales are still expected to finish the year well above 2011 levels. After nine months, sales amounted to 21,356 units, up 19 per cent from the previous year.

Following a slight increase in the previous quarter, new listings in the third quarter were at 10,389 units, down 10 per cent from 2011. New listings within the City of Calgary recorded the largest declines, although areas outside of City limits were also down from the previous year. To the end of September, new listings declined three per cent from 36,696

units in 2011 to 35,660 units in 2012. With the decline in new listings combined with the uptick in sales, active listings have also moved lower. As such, prospective buyers have less selection of homes to choose from compared to 2011. Active listings in September declined 23 per cent to 7,546 units from a year earlier.

The sales-to-active listings ratio averaged 28 per cent in the third quarter, up from 19 per cent during the same period in 2011. As a result, the resale market has become more balanced and there has been more upward pressure on home prices. The average MLS® residential price in the third quarter was \$404,511, an increase of one per cent from the previous year. On a seasonally adjusted basis, the average price has also remained relatively stable with little change from the second to the third quarter. After three quarters, the average price was \$411,075, up two per cent from \$404,312 in 2011.

Figure 5

Source: CREA

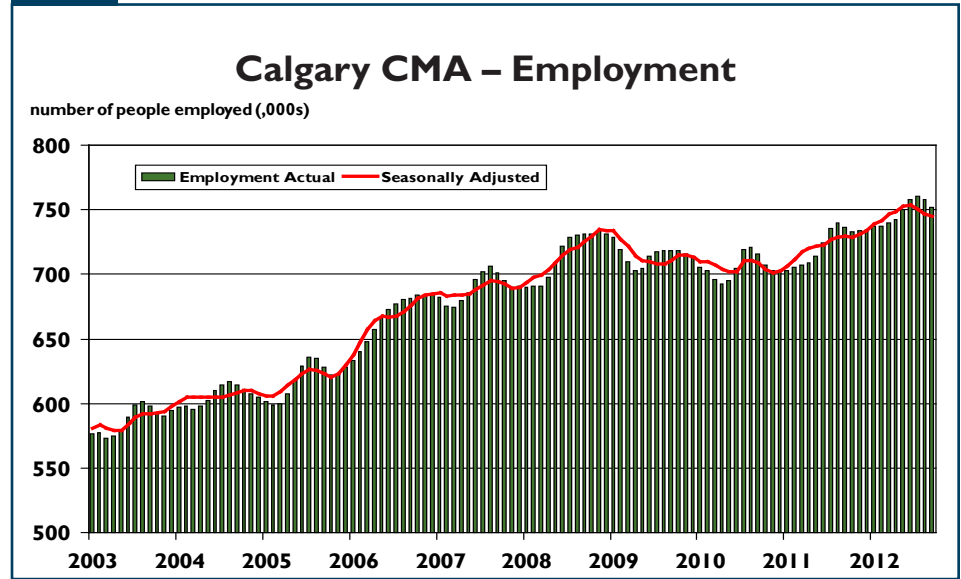

Economy

Full-time job growth supporting housing demand

Job creation in Calgary has been robust in 2012 however the rate of growth started to slow down in the third quarter. The average number of people employed in the third quarter was 751,700, up 2.1 per cent from the previous year. The growth in employment seen thus far has been entirely due to full-time job creation. Full-time employment in the third quarter rose four per cent from 2011 levels, while part-time employment declined 11 per cent. Although total employment had increased in the third quarter, the year-over-year gain was down from the 4.6 per cent increase reported in both the first and second quarters. In addition, employment on a seasonally adjusted basis has also declined. Despite the moderation, average employment to the end of September was up 3.8 per cent from the previous year.

The favourable labour market and employment opportunities in Calgary have contributed to the positive

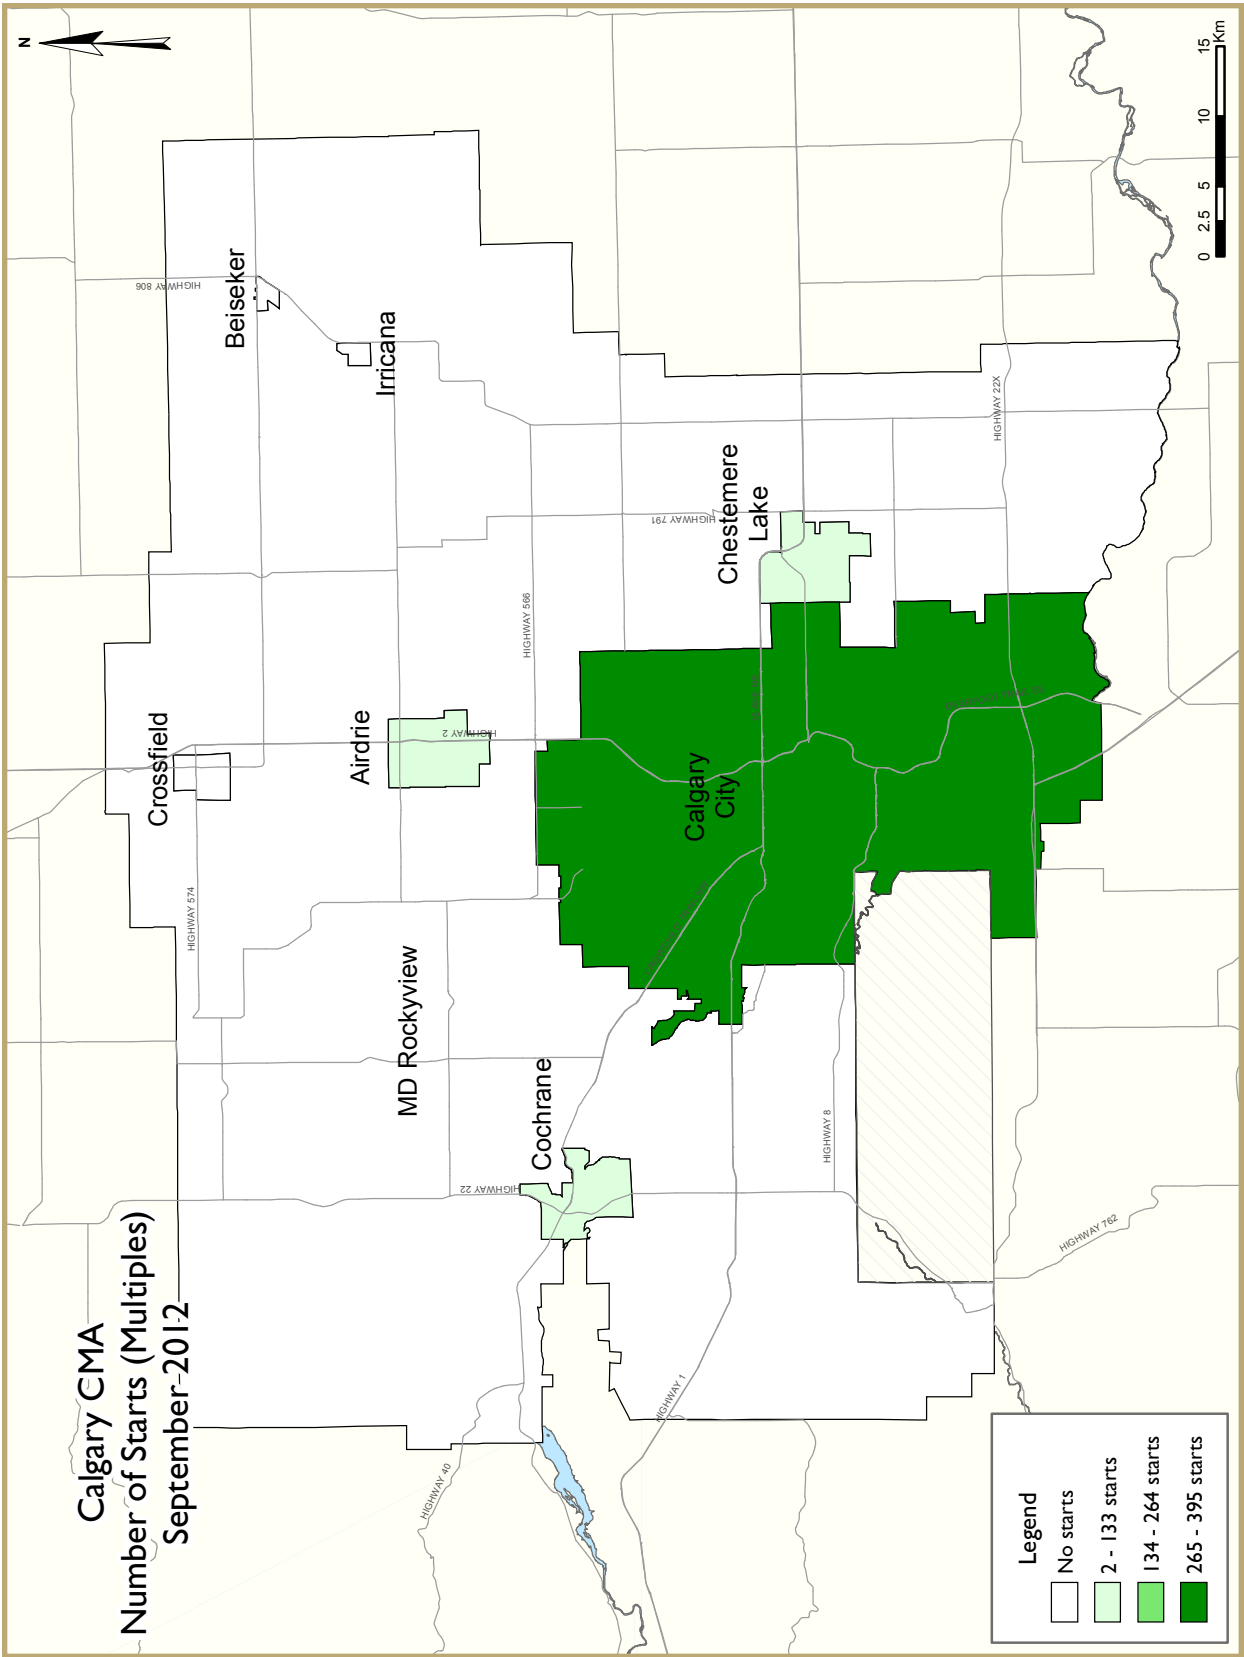

Figure 6

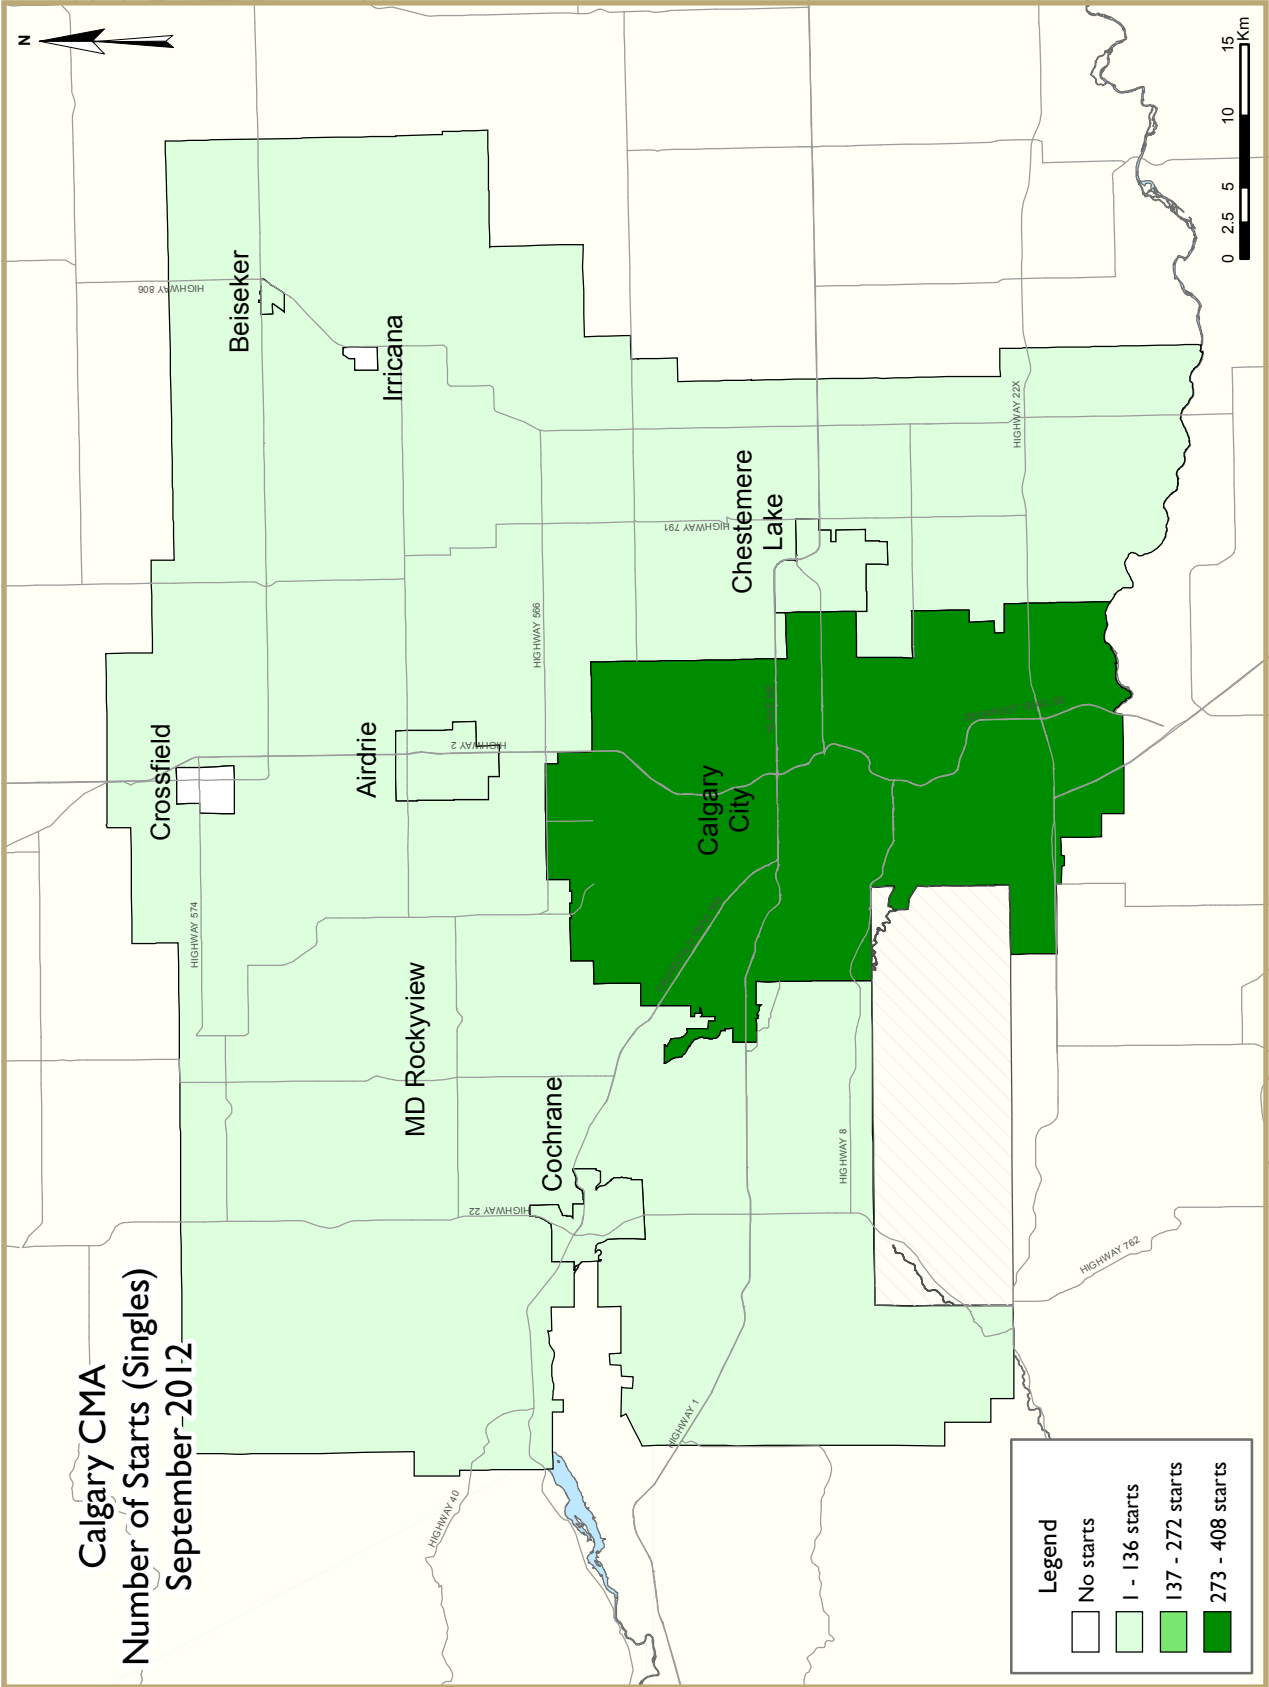

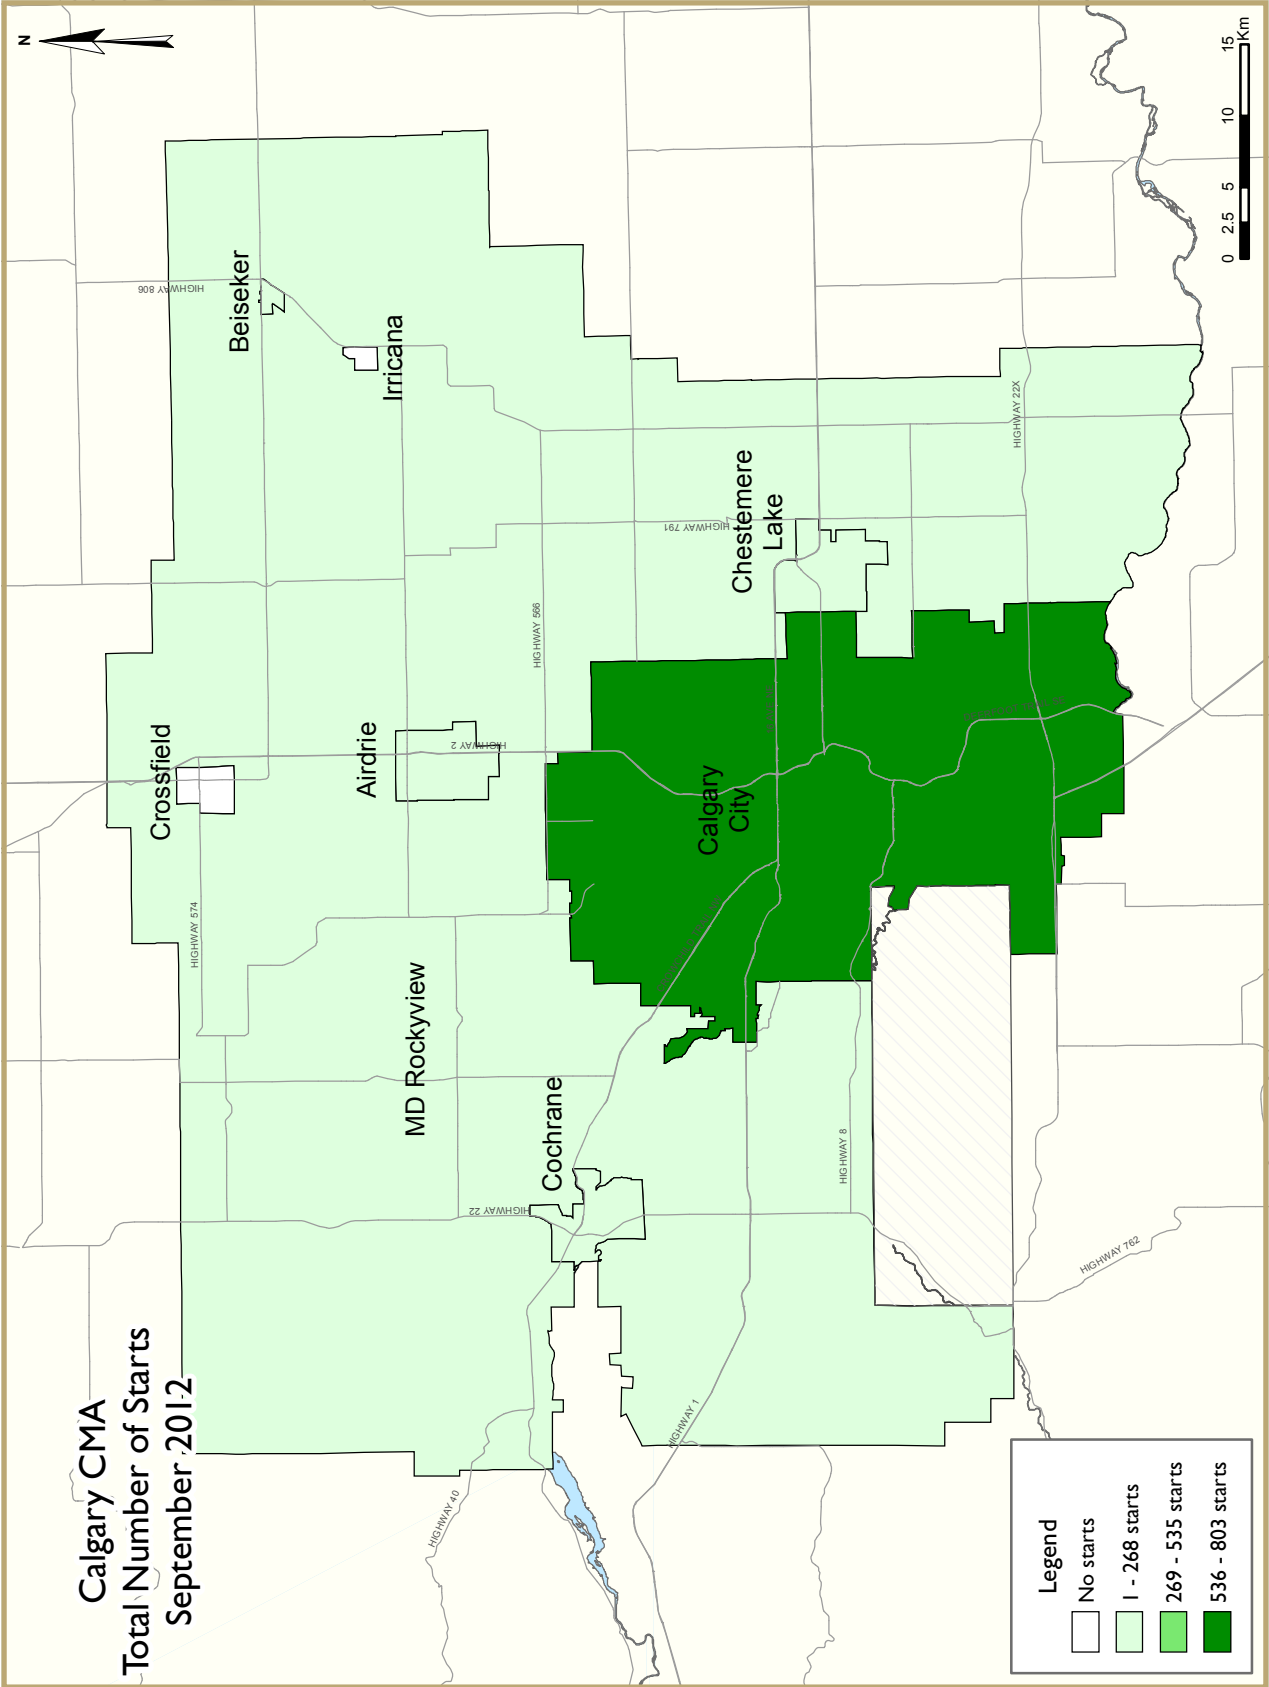

Source: Statistics Canada

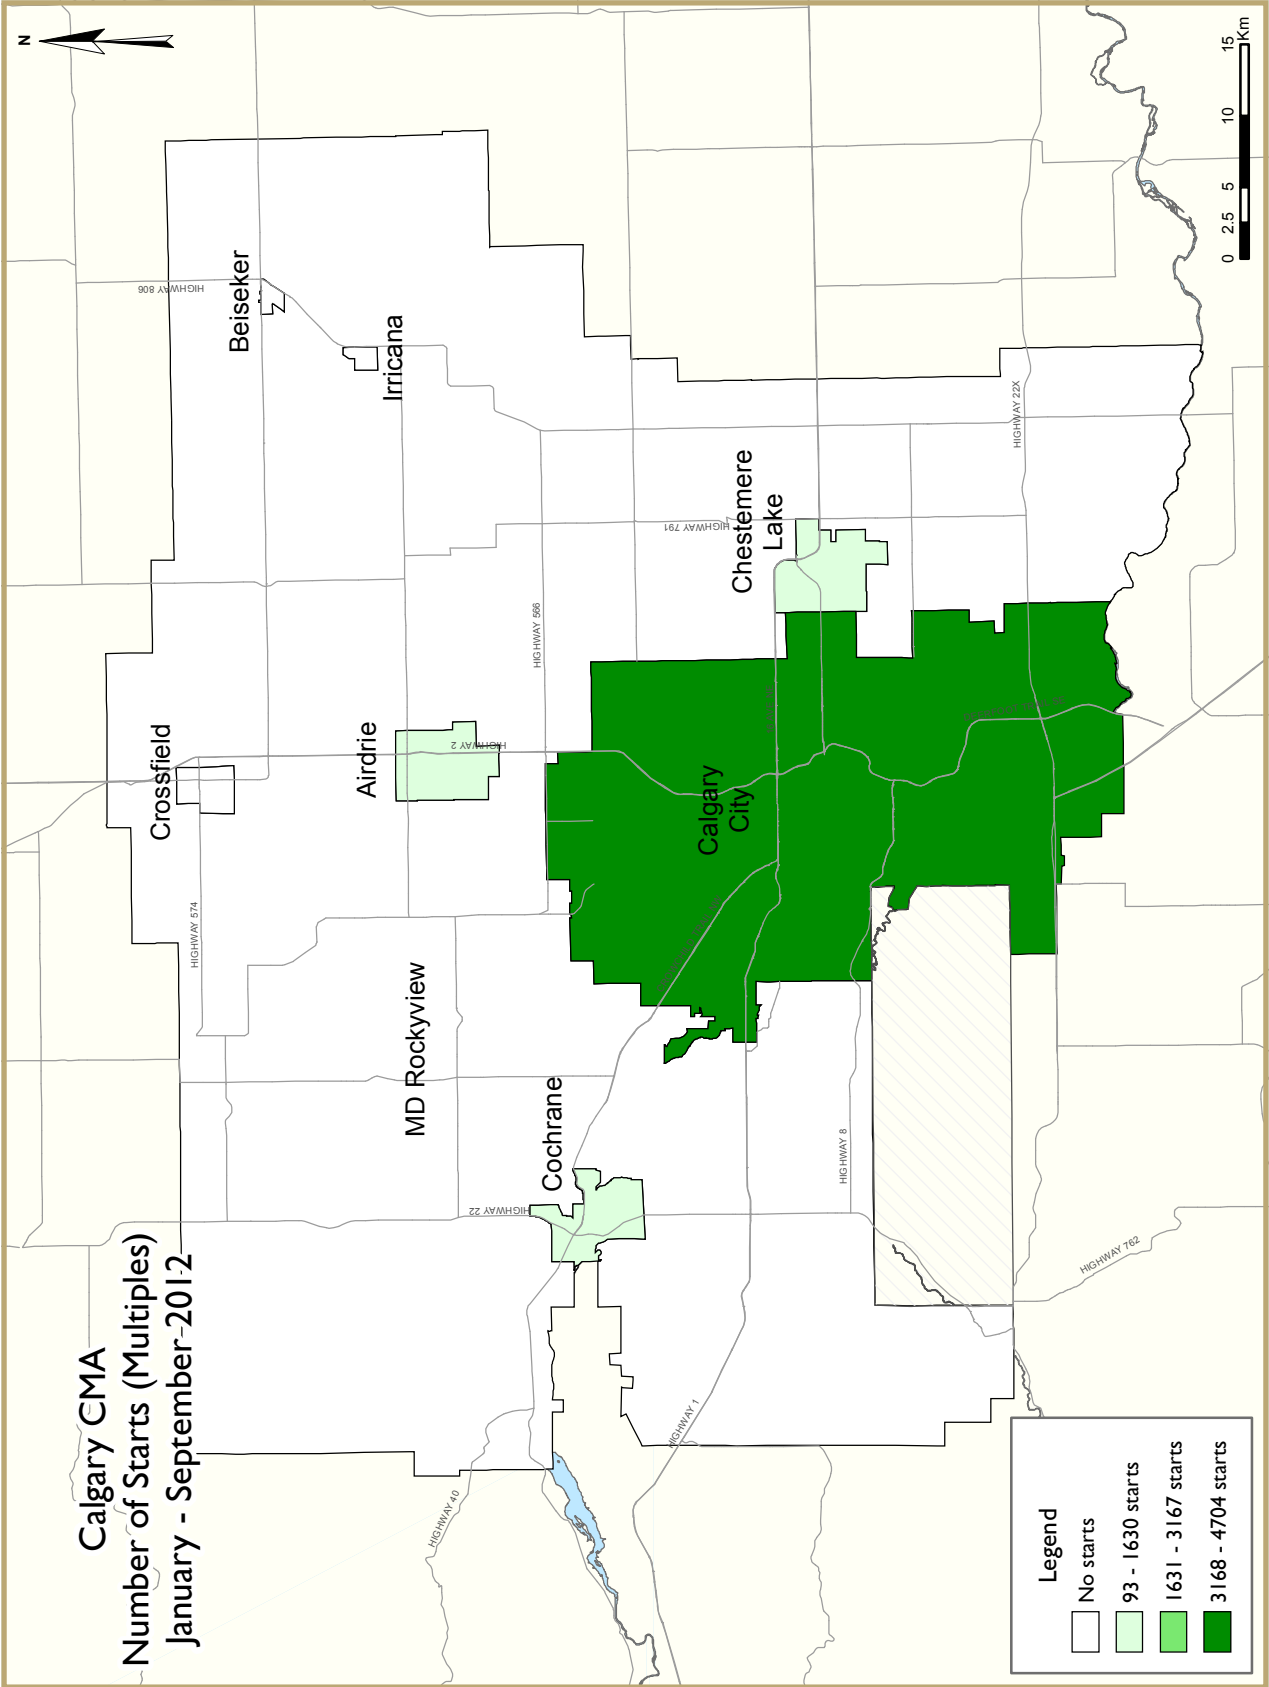

migration flows to Alberta. Net migration in Alberta reached 23,090 people in the second quarter, up 83 per cent from the previous year. The largest contributor was from the international component, netting 9,302 people and representing the best quarterly performance on record. Non-permanent residents increased to 5,244 people in the second quarter, up from 1,341 a year earlier. Alberta also gained migrants from all the provinces with the

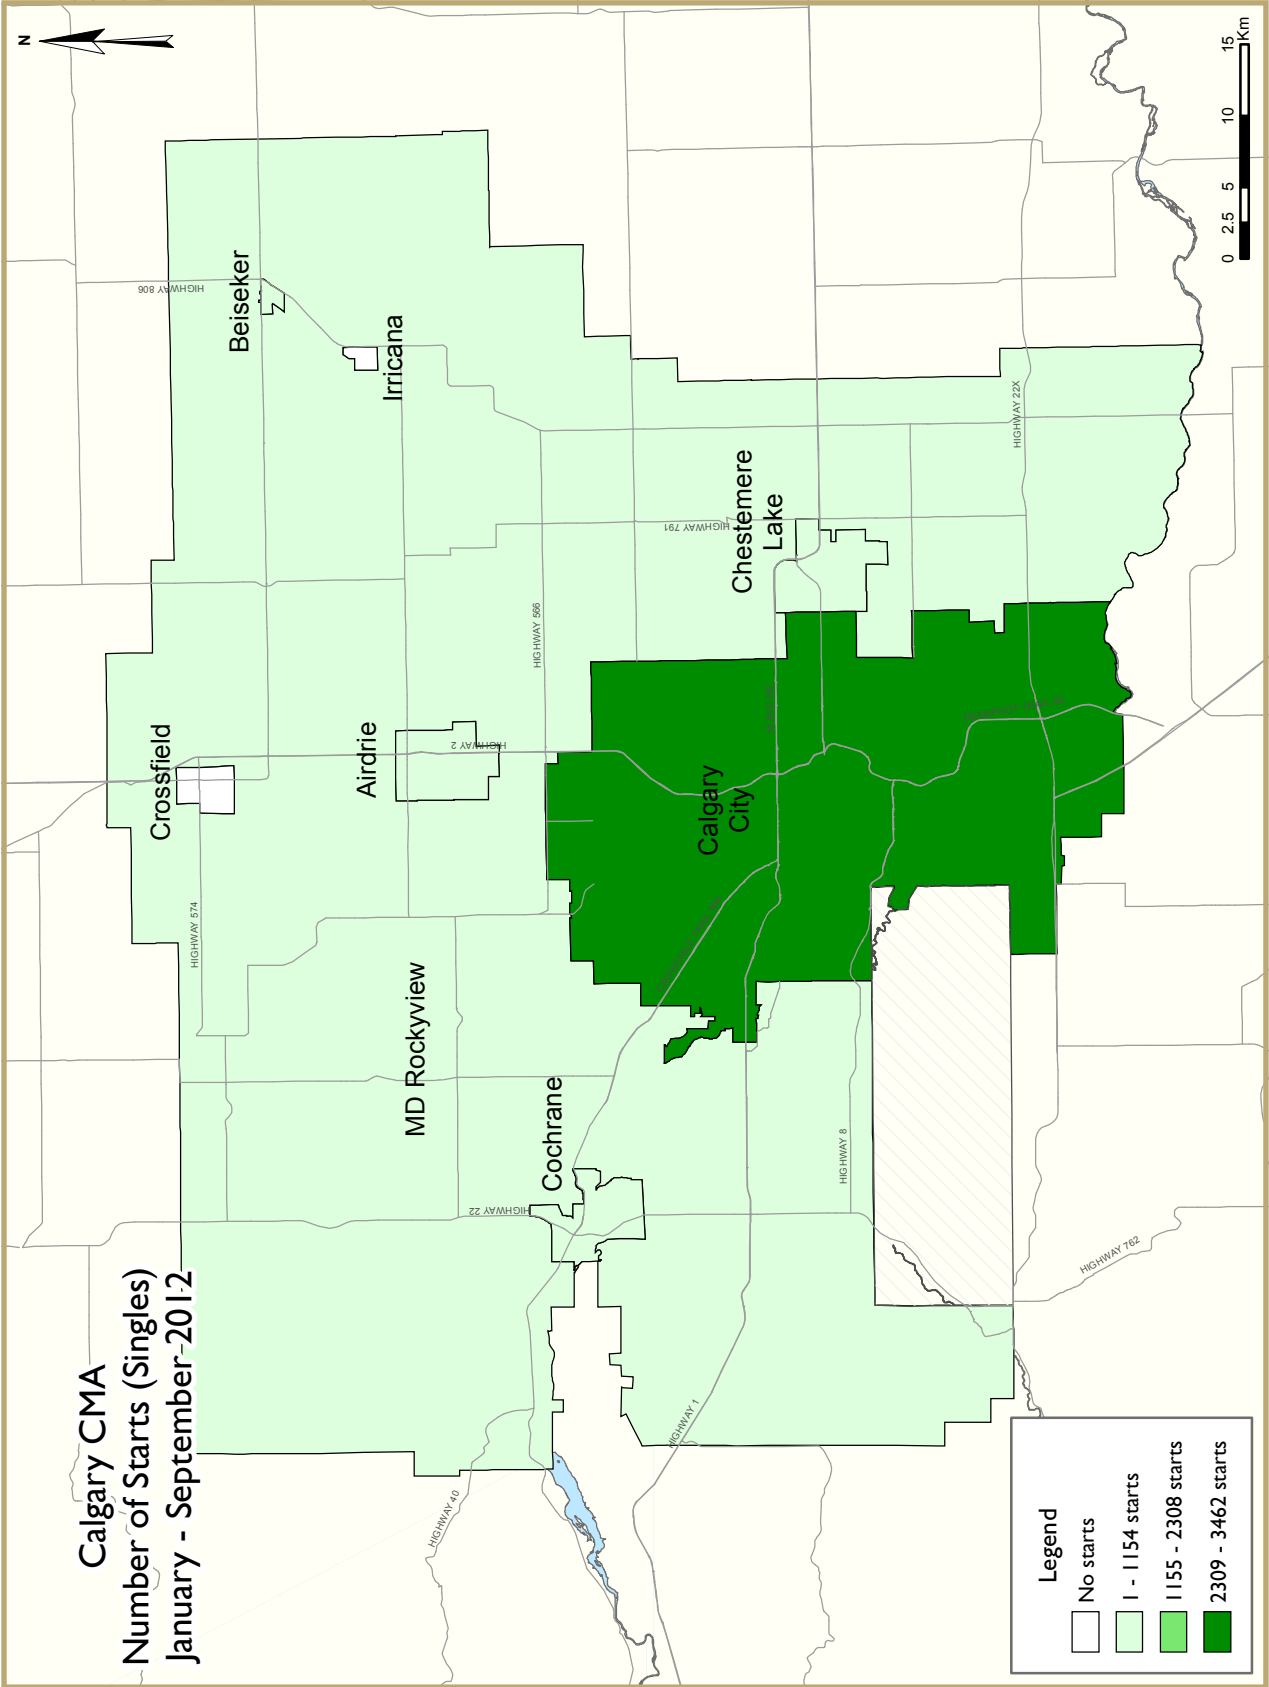

exception of Saskatchewan, Yukon and the Northwest Territories. Net interprovincial migration in the second quarter more than doubled to 8,544 people from 2011 levels. After two quarters, net migration to Alberta increased from 19,938 in 2011 to 43,425 in 2012.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.

On June 1, 2012, CMHC's Market Analysis Centre turned 25!

CMHC's Market Analysis Centre has a strong history as the Canadian housing industry's "go-to" resource for the most reliable, impartial and up-to-date housing market data analysis and forecasts, in the country.

CMHC's Market Analysis Centre e-reports provide a wealth of detailed local, provincial, regional and national market information.

- **Forecasts and Analysis –**
Future-oriented information about local, regional and national housing trends.
- **Statistics and Data –**
Information on current housing market activities — starts, rents, vacancy rates and much more.
