Edmonton's Housing Starts Increase December

Housing starts in the Edmonton Census Metropolitan Area (CMA) increased in December 2011 to 691 units, representing a 24 per cent increase over the 558 units tallied in December 2010. Total starts within Edmonton City rose by 59 per cent

compared with December of 2010 to 518 units. Meanwhile, activity levels in the suburban municipalities decreased by 26 per cent year-over-year to 173 units. To the end of December, total housing starts across the region reached 9,332 units, down six per cent from 9,959 units recorded in all of 2010.

Single-detached starts in December increased by 19 per cent year-over-

year to 369 units. Home builders broke ground for 5,017 units in 2011, representing a 17 per cent decline from the 6,062 units started across the Capital region from January through December of 2010. Adequate new and resale inventories constrained new single-detached production throughout much of 2011. Inside the city of Edmonton, single-detached starts in 2011 were 10 per cent lower than the year prior, reaching 3,080 units. Areas outside of City limits witnessed a 27 per cent reduction in activity in 2011 to 1,937 units.

For the sixth consecutive month, single-detached completions decreased on a year-over-year basis in December. A total of 418 units finished construction in December, representing a 29 per cent decline from the same month in 2010. With units under construction in December eight per cent below the levels reported at the end of 2010, an uptick in the completion rate is not anticipated in the months ahead. Meanwhile, single-detached absorptions decreased by 22 per cent

year-over-year in December to 428 units. With absorptions outpacing completions by 10 units, inventories in December edged lower from the previous month. At 614 units, unabsorbed inventories including show homes were nonetheless 16 per cent higher in December than the number of completed and unoccupied units available across Greater Edmonton at the end of 2010.

The average price of single-detached units absorbed in December moved downward by just under two per cent to \$519,965 from \$528,914 in December 2010. During all of 2011, the average absorbed price increased by almost four per cent to \$509,059 compared with a 2010 average of \$490,128. The higher average price in 2011 resulted from a larger proportion of homes absorbed in price ranges above \$550,000. Meanwhile, contractor selling prices reported by Statistics Canada's New House Price Index (NHPI) for the month of November increased in Edmonton by 1.1 per cent on a year-over-year basis.

Multi-family starts, which consist of semi-detached units, rows, and apartments, increased by 29 per cent year-over-year in December to 322 units. Stronger activity in the semi-detached and row segments compensated for a 57 per cent decrease in apartment starts compared with December 2010. In Edmonton City, multiple unit starts increased in December by 80 per cent over December 2010 to 267 units. For the year, multiple dwelling starts across the metropolitan area in 2011 totalled 4,315 units, an 11 per cent increase from levels throughout the previous year. Multi-family production in 2011 represented the best performance for the industry since 2007.

Multiple dwelling completions in December decreased by 22 per cent from the final month of 2010 to 450 units. For the year, multi-family builders completed 3,633 units, nine per cent fewer than the 4,010 dwellings that finished construction in 2010. Absorptions in December totalled 449 units, representing a six per cent decrease from the 476 units drawn off the market in December 2010. Inventory levels for multi-family dwellings in December stood at 884 units, down almost four per cent from a year prior and the lowest level in 13 months. However, units under construction in December were 17 per cent higher than the multis in progress at the end of 2010.

Total new housing supply across Metro Edmonton, which includes unabsorbed inventory plus units under construction, stood at 10,688 units in December, six per cent above the 10,080 units in supply at the end of 2010.

Resale Market

Modest Gains in 4th Quarter

Following a 15 per cent year-over-year increase during the third quarter of 2011, the growth in residential MLS® sales moderated in the final three months of the year. Sales across the Edmonton Region during the fourth quarter of 2011 amounted to 3,323 units, an increase of three per cent from transactions recorded from October through December of 2010. For the year, total residential MLS® sales in 2011 reached 16,963 units, an increase of 3.4 per cent from the 2010 total of 16,403 units. The results for 2011 were about 1,000 units below the ten-year annual average of nearly 17,950 units sold on the MLS® in Greater Edmonton between 2001 and 2010.

The number of new MLS® listings across the Edmonton region decreased by 3.7 per cent year-over-year in the fourth quarter to 5,094 units compared with 5,292 residential listings in the last three months of 2010. Despite the improvement in sales and the decrease in listings, buyers' market conditions prevailed during the final months of 2011. Although active listings in December 2011 were down by almost eight per cent year-over-year, the sales-to-active listings ratio stood at 15.6 per cent at year-end. On a seasonally adjusted basis, the sales-to-active listings ratio remained close to 18 per cent for much of 2011. With less than one-in-five active listings selling in a given month, vendors may need to adjust their price expectations in order to achieve a quicker sale.

With buyers holding the advantage throughout the year, prices in 2011 have been relatively flat. Following a one per cent year-over-year increase in the third quarter, the average MLS® residential price increased in the fourth quarter by 0.9 per cent from the final three months of 2010, reaching \$318,806. Despite the modest gains reported in the second half of 2011, average prices for the year ended below 2010 levels. The average price for 2011 decreased by one per cent to \$325,595 compared with \$328,803 in 2010.

Economy

Labour Market Continues to Gain Strength

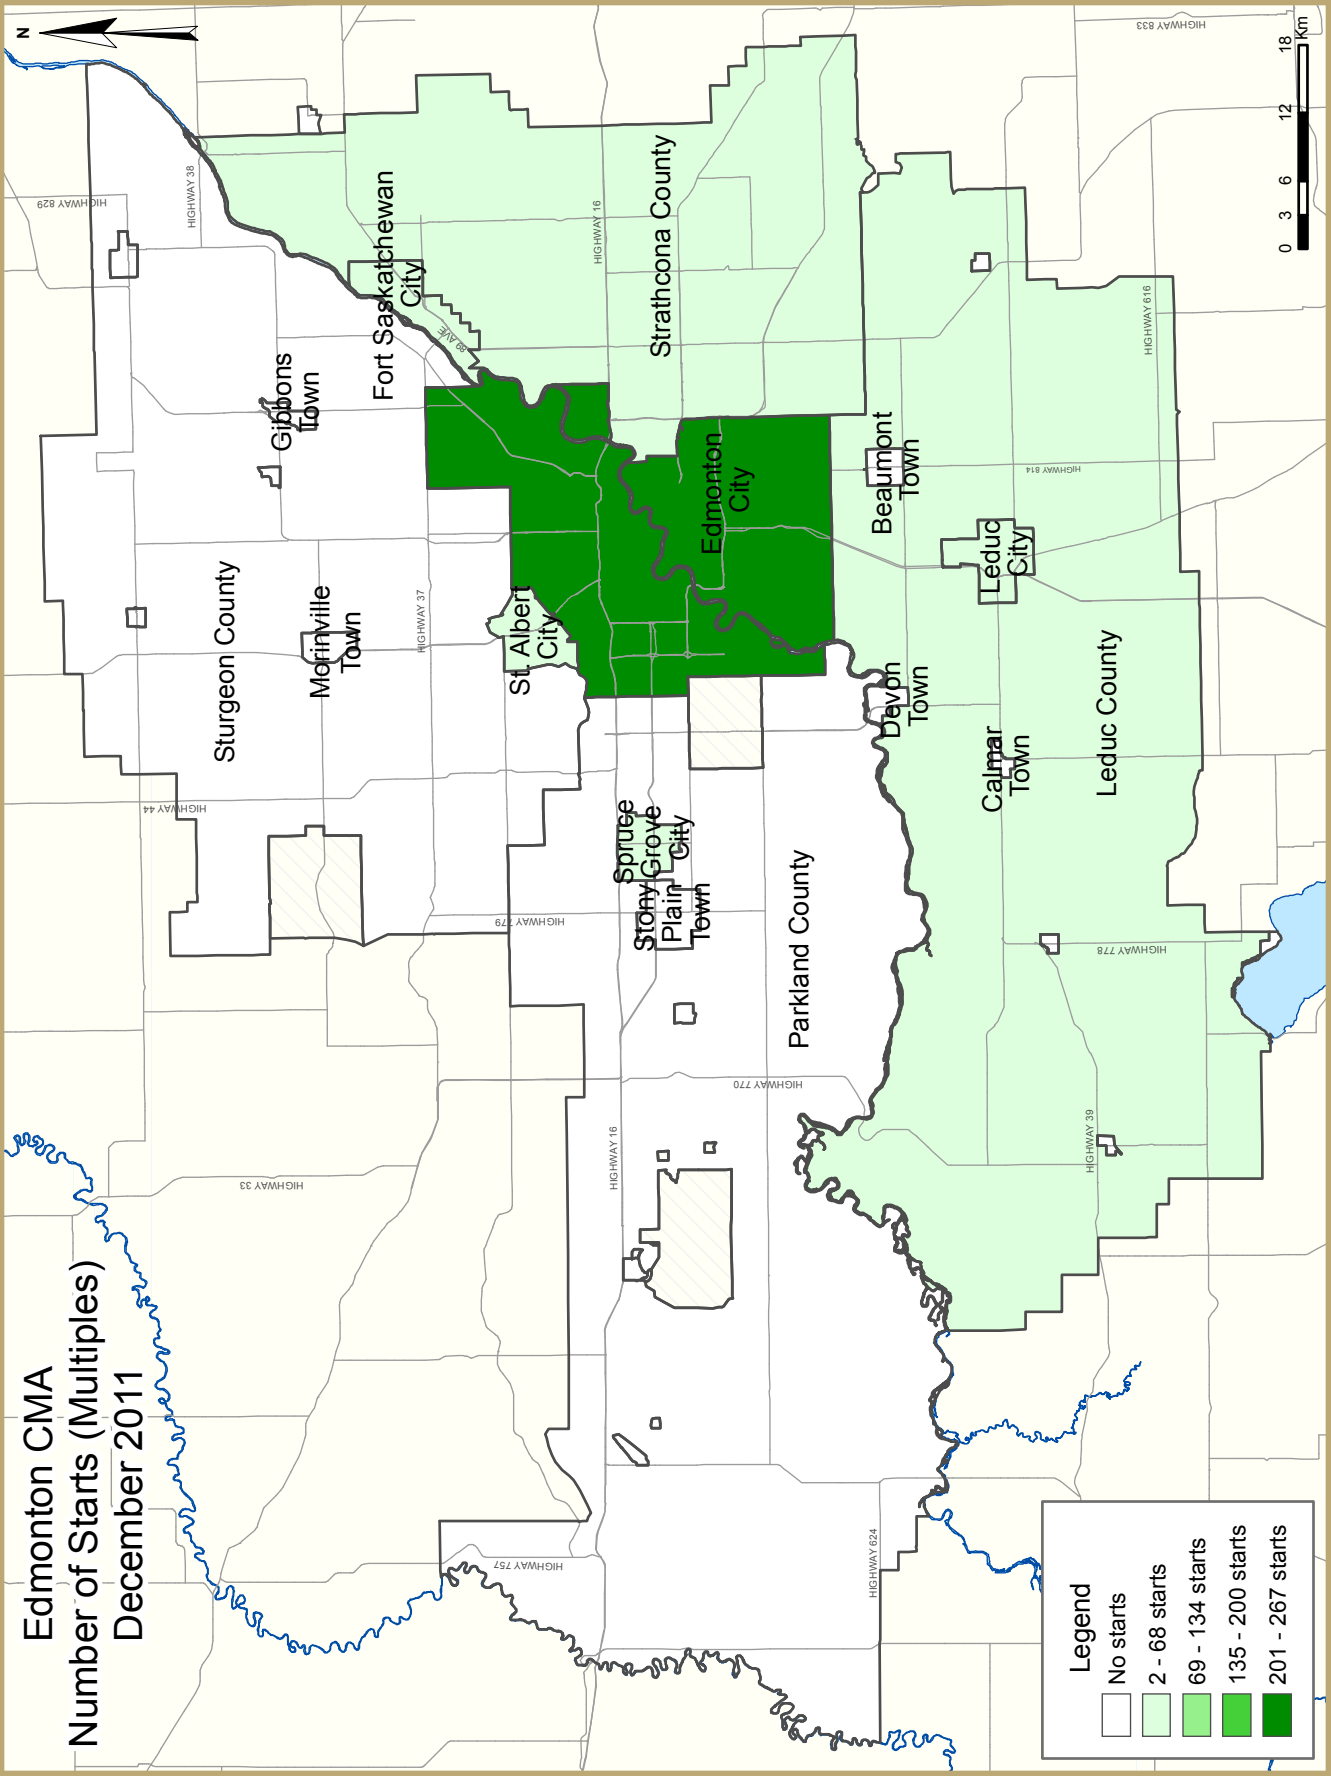

Edmonton's labour market continued to put in a strong performance in the last three months of 2011.

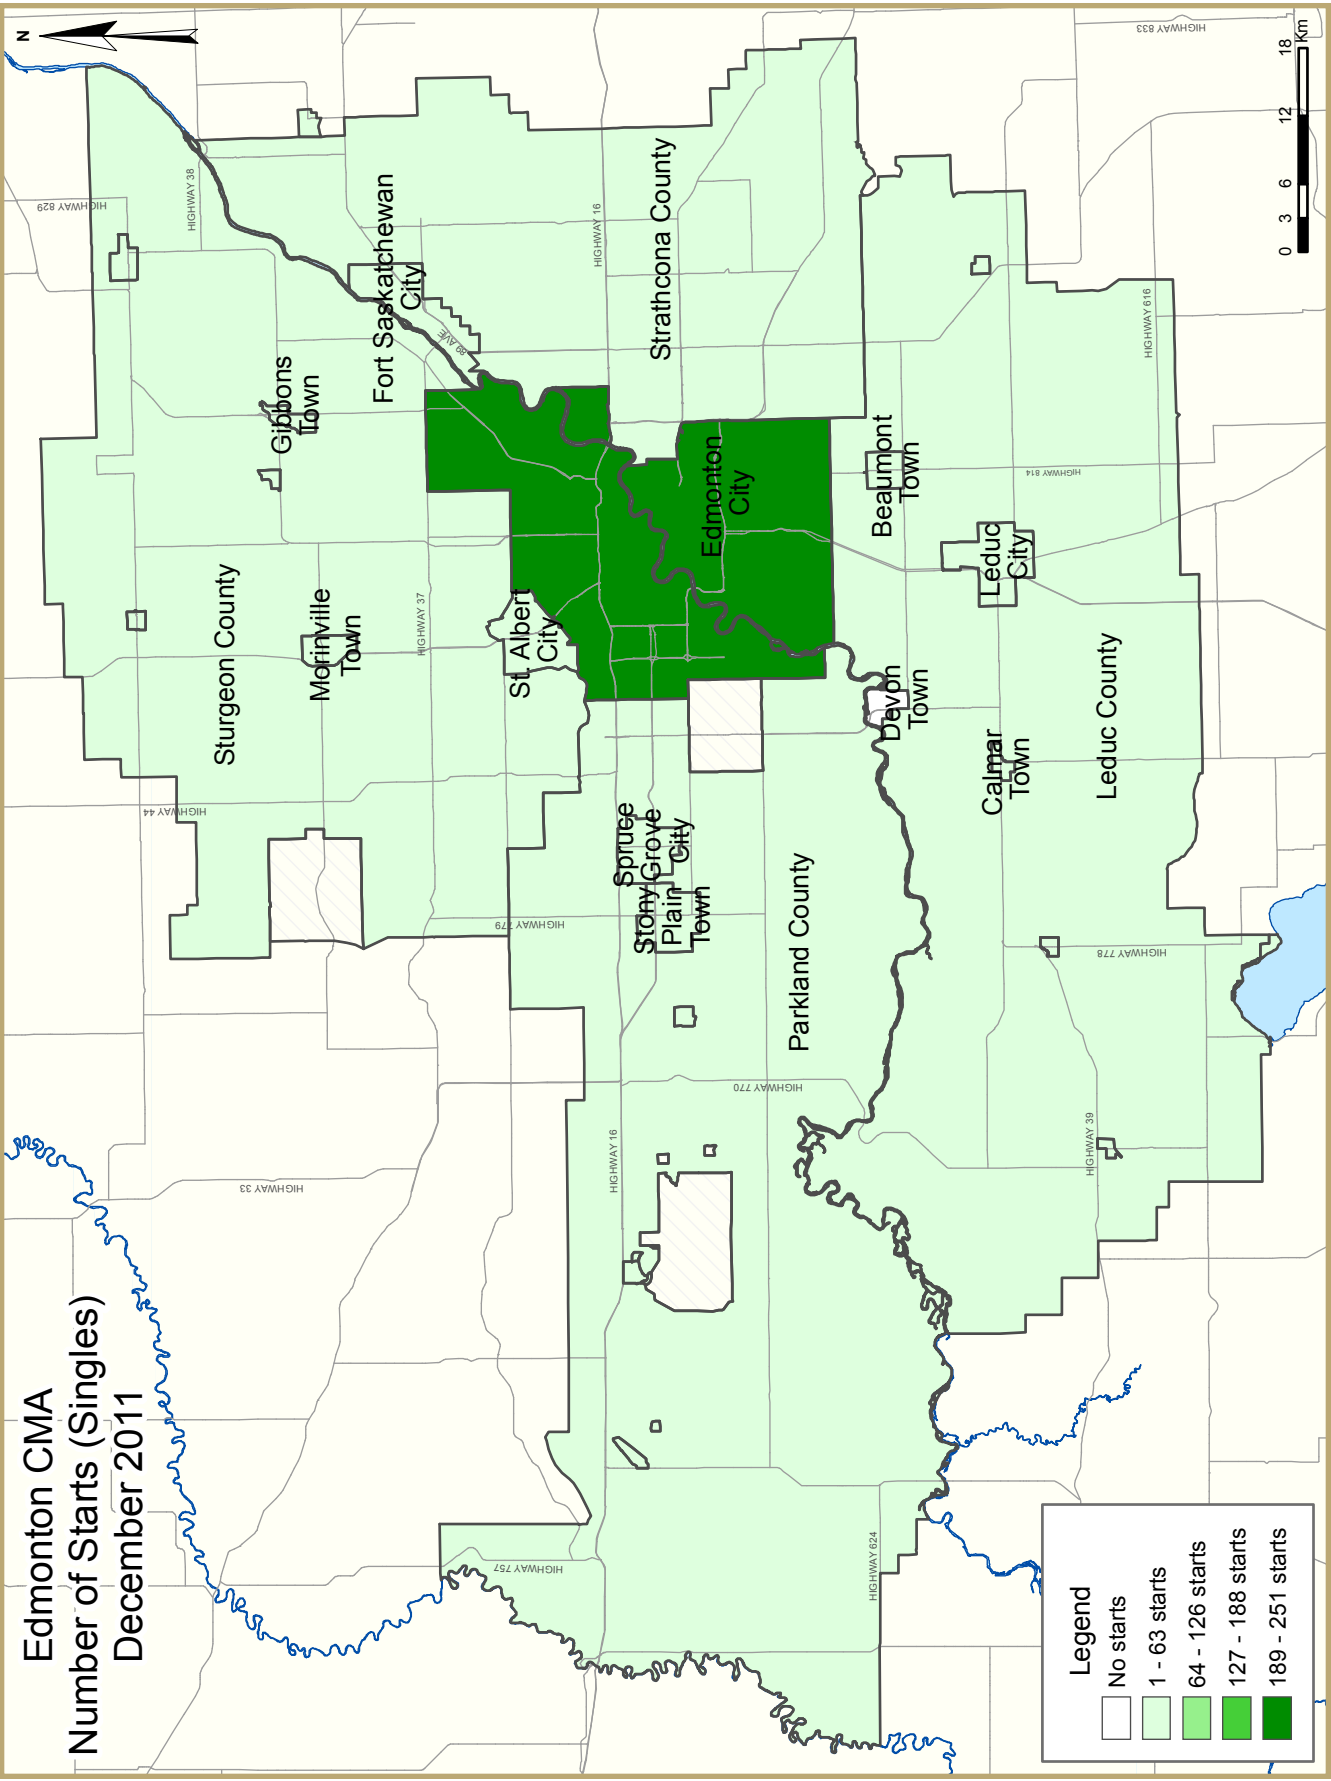

The seasonally adjusted unemployment rate was 5.1 per cent in the fourth quarter, representing the lowest level since the first quarter of 2009. Job gains in 2011 were very impressive, particularly in full-time positions, which should help to sustain housing demand in 2012. The number of people employed (seasonally adjusted) in the fourth quarter averaged 681,200, up 5.5 per cent

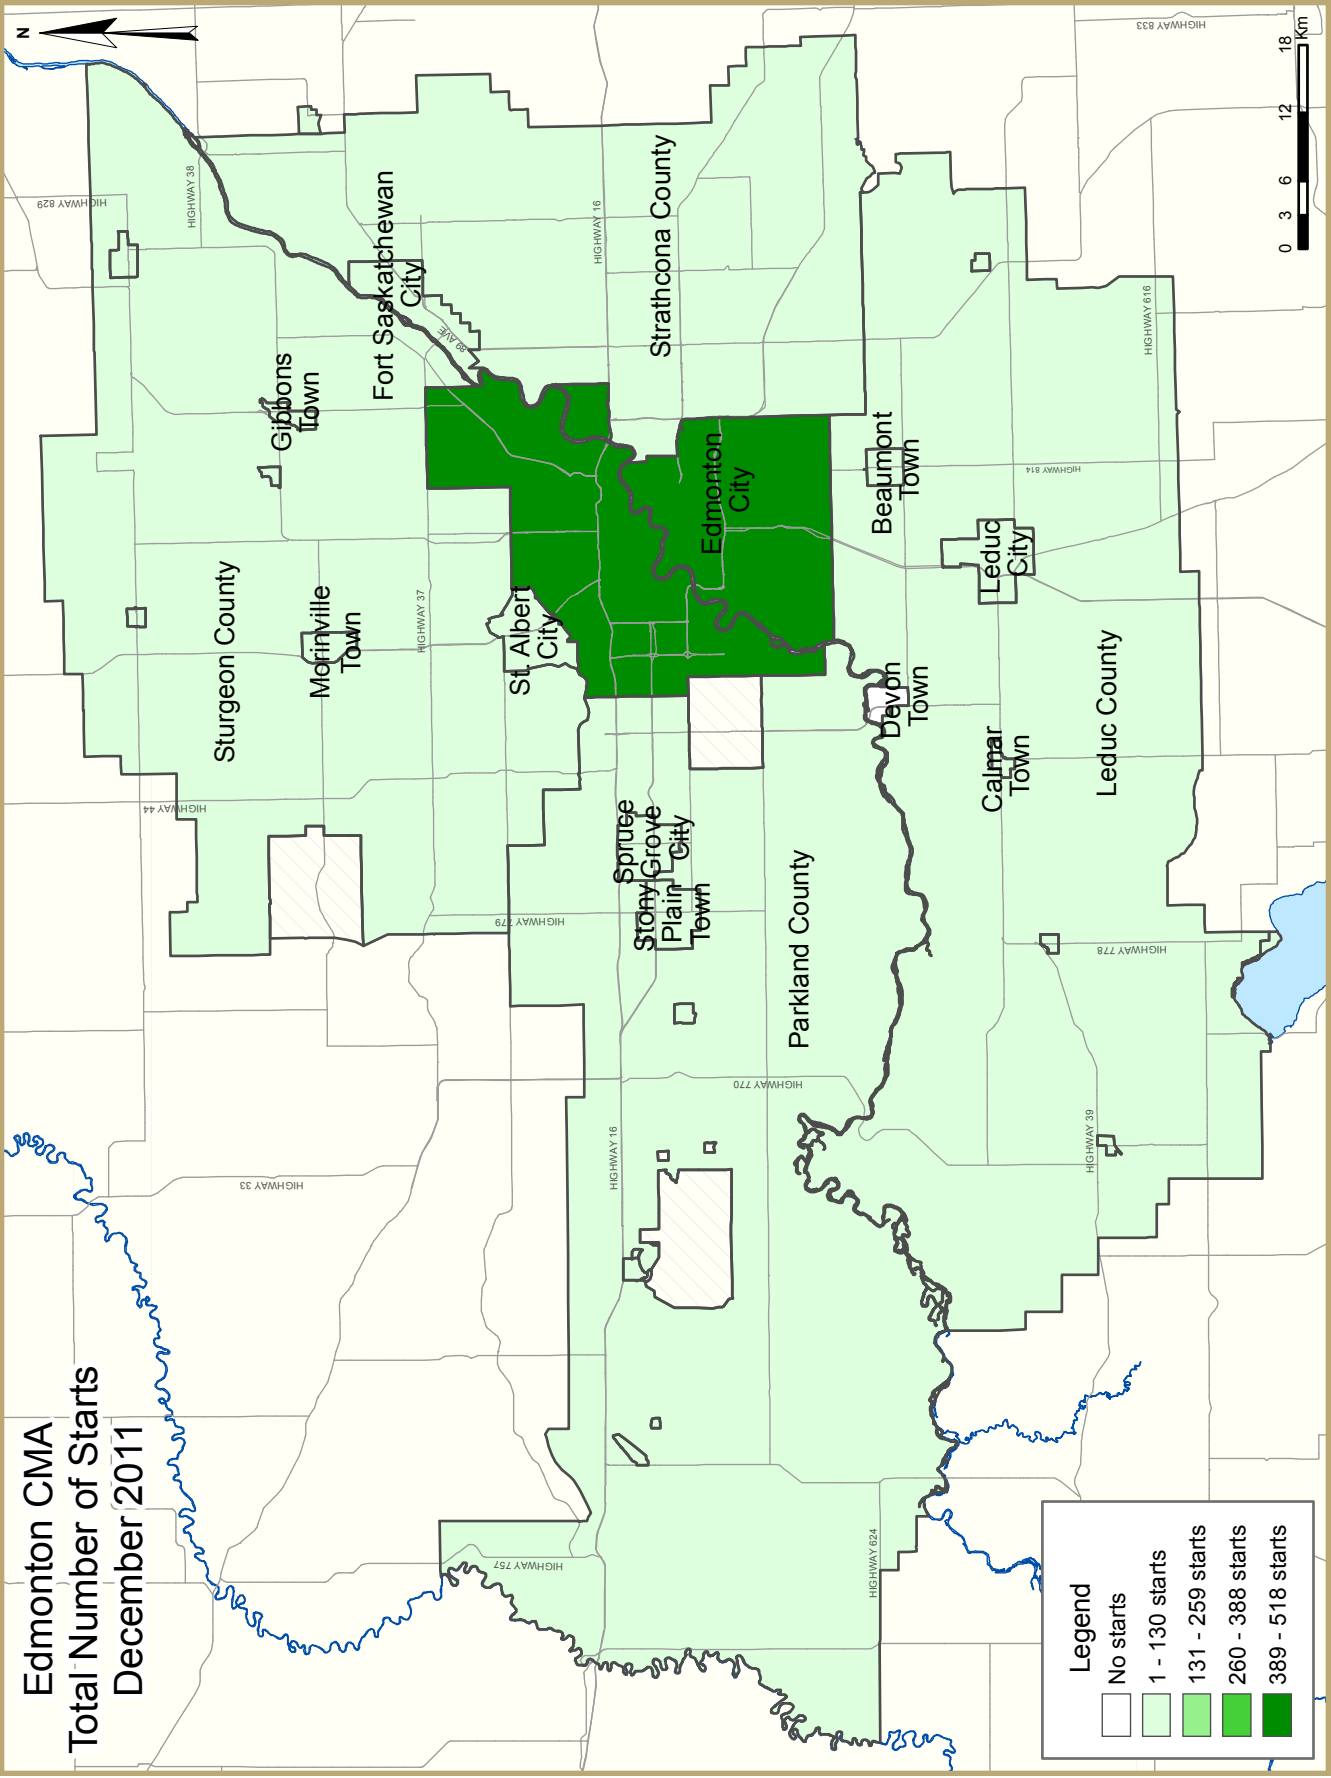

year-over-year for a net increase of over 35,000 positions. Meanwhile, the tighter labour market resulted in improved earnings growth across the region. Statistics Canada's Average Weekly Earnings for Edmonton increased on average by 2.5 per cent in 2011 compared with an average 0.6 per cent gain during all of 2010.

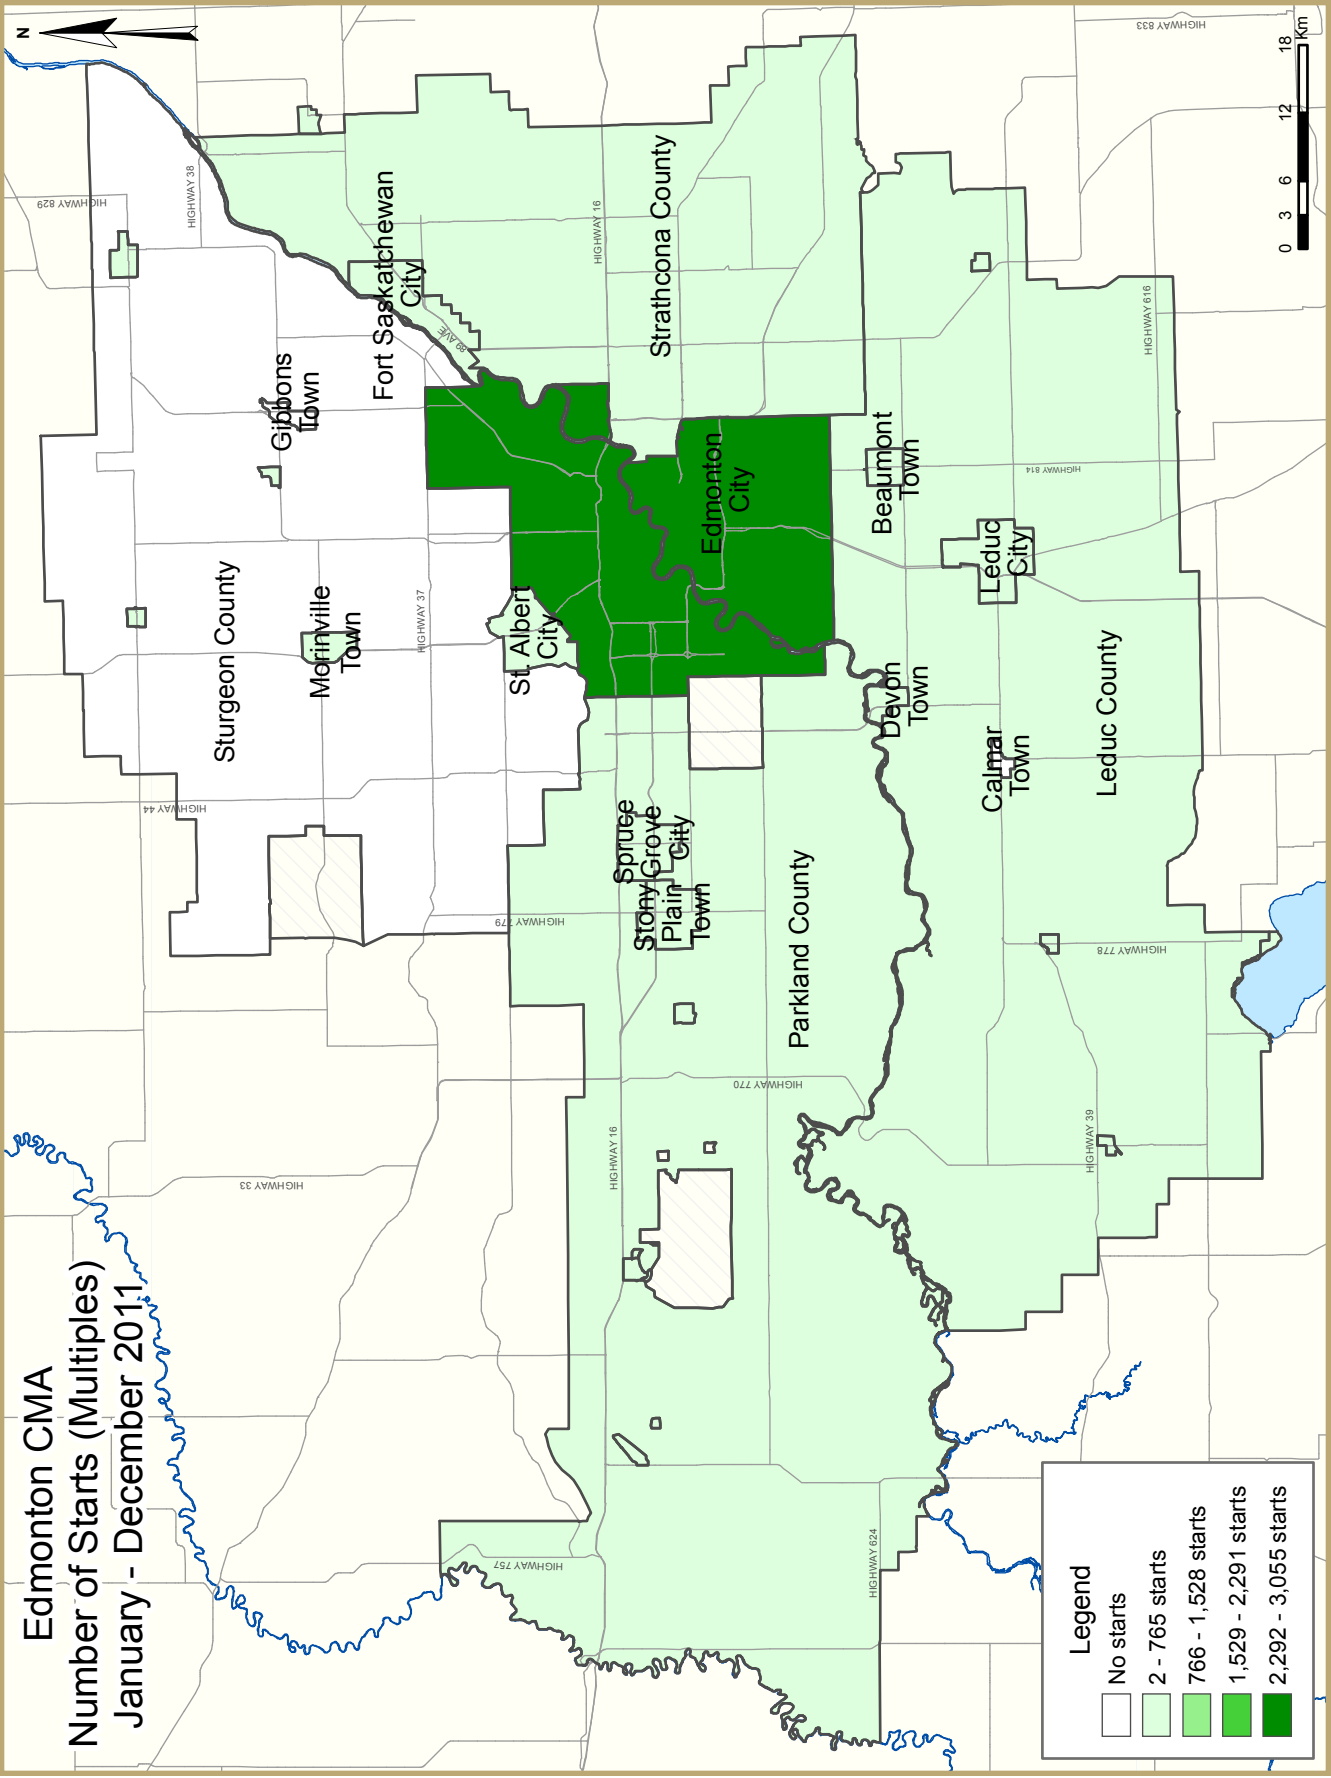

With unemployment levels in Alberta lower than many other parts of Canada and job creation much stronger, an increased number of people have moved to the province relative to the previous year. Statistics Canada estimates showed that Alberta saw a net gain of 3,136 interprovincial migrants during July through September of 2011 compared with a

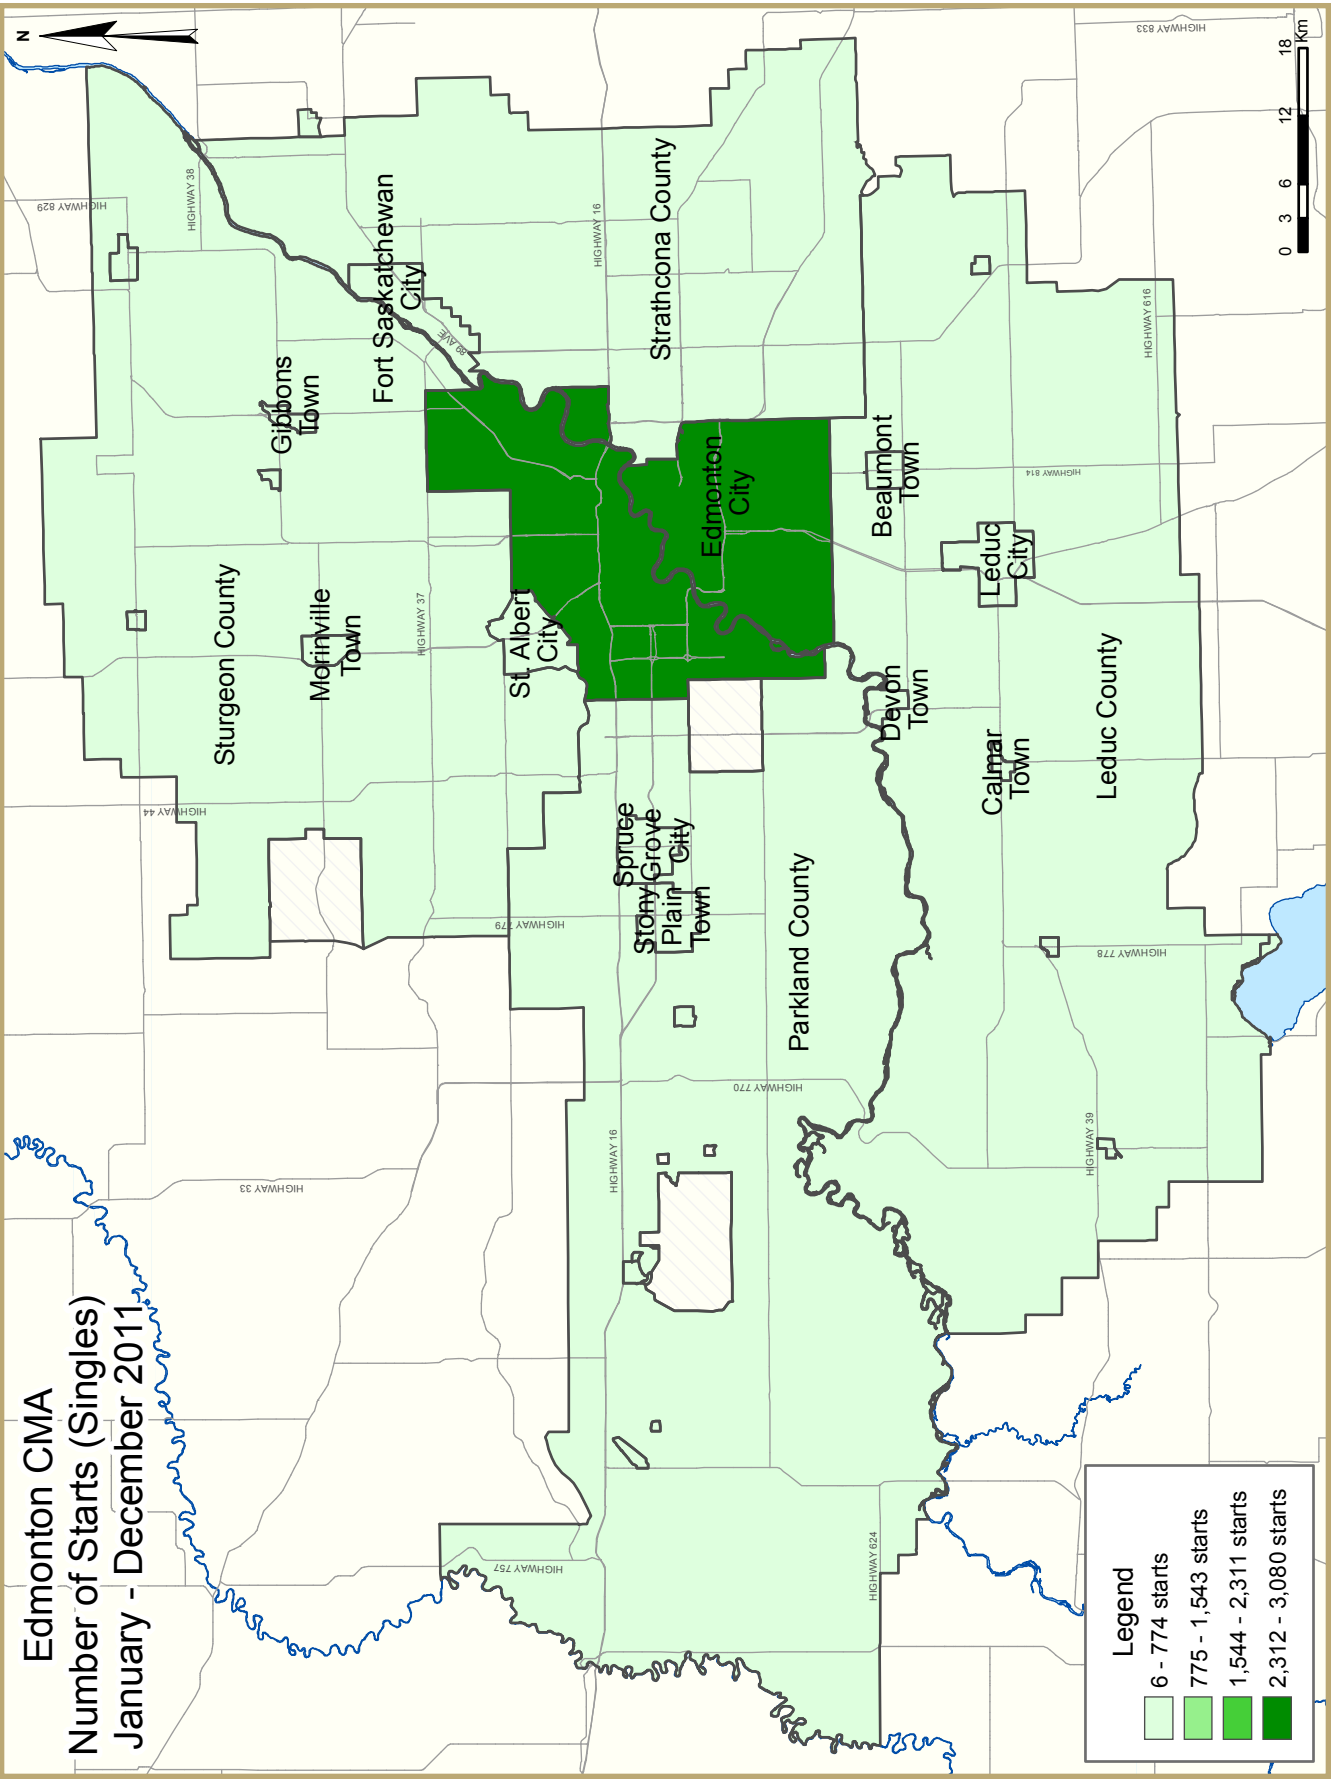

net loss of 1,155 persons in the third quarter of 2010. Migration from international sources, while down from the previous quarter, was also much stronger in the third quarter than the year prior. The total 7,580 international net migrants was the highest third quarter tally since 2008. A continued bright spot for Alberta was the uptick in net flow of non-permanent residents, which began during the second quarter of 2011. This category, which represents many temporary foreign workers, provides another indication of resurgence in the province's economy as employers look outside of Canada to help ease the tightening labour market conditions in some sectors.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
