## How to obtain more information

For information about this product or the wide range of services and data available from Statistics Canada, visit our website at [www.statcan.gc.ca](http://www.statcan.gc.ca), e-mail us at [infostats@statcan.gc.ca](mailto:infostats@statcan.gc.ca), or telephone us, Monday to Friday from 8:30 a.m. to 4:30 p.m., at the following numbers:

### Statistics Canada's National Contact Centre

Toll-free telephone (Canada and United States):

Inquiries line	1-800-263-1136
National telecommunications device for the hearing impaired	1-800-363-7629
Fax line	1-877-287-4369

Local or international calls:

Inquiries line	1-613-951-8116
Fax line	1-613-951-0581

### Depository Services Program

Inquiries line	1-800-635-7943
Fax line	1-800-565-7757

## To access this product

This product, Catalogue no. 11-626-X, is available free in electronic format. To obtain a single issue, visit our website at [www.statcan.gc.ca](http://www.statcan.gc.ca) and browse by "Key resource" > "Publications."

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner. To this end, Statistics Canada has developed standards of service that its employees observe. To obtain a copy of these service standards, please contact Statistics Canada toll-free at 1-800-263-1136. The service standards are also published on [www.statcan.gc.ca](http://www.statcan.gc.ca) under "About us" > "The agency" > "Providing services to Canadians."

## Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

## Standard symbols

The following symbols are used in Statistics Canada publications:

.	not available for any reference period
..	not available for a specific reference period
...	not applicable
0	true zero or a value rounded to zero
0 <sup>s</sup>	value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
<sup>p</sup>	preliminary
<sup>r</sup>	revised
X	suppressed to meet the confidentiality requirements of the <i>Statistics Act</i>
E	use with caution
F	too unreliable to be published
*	significantly different from reference category ( $p < 0.05$ )

# Is Canada Losing Its Status as a Debtor Nation?

By Ryan Macdonald and Guy Gellatly

This article in the *Economic Insights* series reports on long-run changes in the value of Canada's external financial assets and liabilities. It summarizes results from the research paper, *Canada's International Investment Position: Recent Trends and Implications for Aggregate Measures of Income and Wealth*, and is part of an ongoing research program at Statistics Canada that investigates the international dimensions of the Canadian economy.

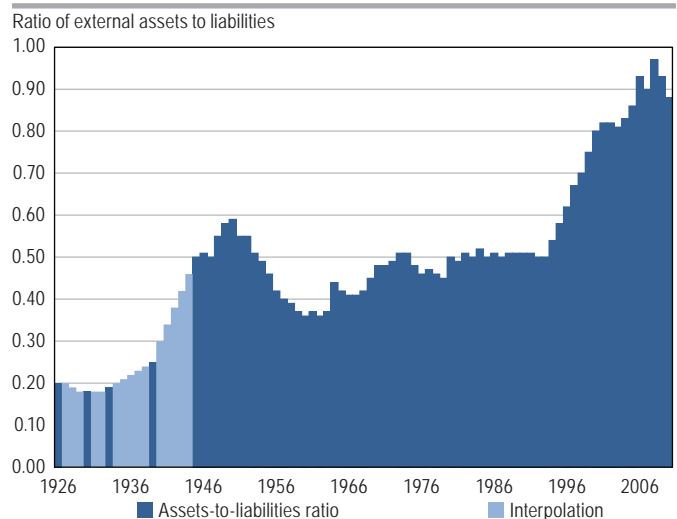

Foreign investments in Canada often garner headlines and spark debates over whether injections of foreign debt and equity into Canadian companies will have positive impacts on the ability of Canadian industries to grow, create jobs, and develop innovative products. Such debates have an enduring place in the nation's economic history, reflecting the fact that, from the earliest days, foreign capital has been an important source of funds for Canada's industries. The extent to which Canadian businesses, households and governments also invest in foreign economies is less recognized, and the overall value of these investments has increased in recent decades. This, in turn, has had a pronounced impact on Canada's net financial position in relation to the rest of the world.

## Assets rising relative to liabilities

Information about foreign investments in Canada and Canadian investments abroad is collected and compiled by Statistics Canada to estimate the value of assets that foreigners hold in Canada (Canada's financial liabilities) and the value of assets that Canadians hold abroad (Canada's financial assets). The difference between the value of these assets and liabilities is Canada's net international investment position (net IIP). It can be tracked through time by examining changes in its dollar value or in the ratio of the value of external financial assets to the value of external financial liabilities. If the ratio is less than 1.0, the value of Canada's foreign assets is less than the value of Canadian assets held by foreigners.

Over roughly four generations, Canada's financial position vis-à-vis the rest of the world improved markedly. In 1926, the value of external assets that Canada had accumulated was 20% of the value of its external liabilities; by 2010, the figure had risen to 88% (Chart 1). This growth of Canada's external assets relative to its external liabilities raises questions about why the increase occurred, and why it accelerated after the early 1990s.

### Improving position due to Canadians investing abroad

Improvements in Canada's net IIP are the result of Canadians investing more abroad, not foreigners investing less in Canada. The pace at which Canadians invested abroad increased relative to the growth of foreign investment in Canada (Table 1). Between 1951 and 2010, the value of foreign assets owned by Canadians increased, on average, by 9.8% per year, compared with an 8.9% increase in the value of foreign assets in Canada.

The increase in Canadian investments abroad was not constant through time, nor was it consistent across investment categories. The 1960s and 1970s saw larger gains in direct investments and in the category "other investment," which includes short-term receivables and payables and banking assets and liabilities. During these years, foreign investments in Canada trailed behind Canadian investments abroad.

The 1980s saw a rise of Canadian portfolio investments abroad, as investments in foreign bonds and stocks increased rapidly from a relatively low initial level. Foreign investments in Canada, particularly portfolio investments, continued to expand during these years.

During the 1990s, Canada's stock of foreign portfolio assets continued to increase (an average of 17.1% per year), while the stock of foreign portfolio assets in Canada grew more slowly than in previous decades. Consequently, the overall value of Canada's external financial assets grew more rapidly than did the value of its external liabilities, improving Canada's net international investment position.

In the 2000s, Canada's external asset growth continued to outpace increases in external liabilities. Once again, the largest difference between Canadian and foreign activity was in portfolio investment. This pattern held until mid-2007, after which Canadian portfolio investors pulled back while foreign portfolio investments increased substantially. Consequently, by 2009, for the first time in two decades, the growth of overall foreign investment in Canada surpassed the growth of overall Canadian investment abroad.

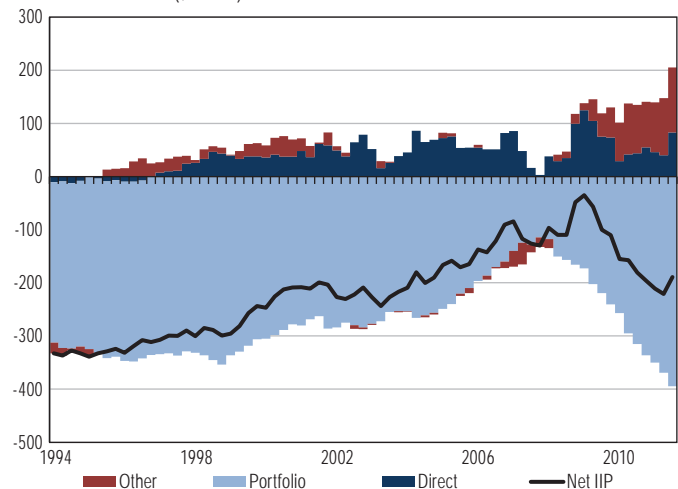

### Structural changes after 1990

Canada's net IIP increased most rapidly in the 1940s and the 1990s. During the Second World War, loans to allies bolstered Canada's assets. During the 1990s, a variety of structural factors converged to facilitate investment abroad.

The 1990s witnessed the collapse of the Soviet Union, the advent of the North American Free Trade Agreement, greater global financial integration, China's emergence as an economic power, and the growth of developing market economies. In Canada, content restrictions on foreign investments were partially removed from pensions. Accordingly, the scope of markets in which Canadians could invest broadened, and the pool of savings that could be invested internationally increased. Canada's net holdings of external portfolio assets increased substantially (Chart 2).

Source: Statistics Canada, CANSIM table 376-0037.

### Portfolio investments leading a reversal

Greater portfolio investment abroad is also the main reason that Canada's net IIP declined through most of the 1990s and 2000s, and why it increased after 2008. The net inflow of foreign portfolio investment reversed course after 2007, and became sufficiently large in 2009 that it widened the gap between Canada's external assets and liabilities. Net IIP in the third quarter (Q3) of 2011 was \$189.5 billion, roughly the same as in 2004. However, because the domestic economy expanded between 1994 and 2011, the external debt stood at 11% of gross national income<sup>1</sup> in 2011 Q3, down from 46% in 1994 Q1, and from the 14% to 17% recorded in 2004 when the level of net IIP was similar to the current level.

### Towards becoming an international creditor

In recent decades, Canadians increased their holdings of foreign assets more rapidly than foreigners acquired Canadian assets. The result was a narrowing of the difference between the stock of Canada's foreign assets and the stock of Canada's foreign liabilities. While the gap widened after the global financial crisis and recession of 2007 to 2009<sup>2</sup>, the record shows that Canada's net external debt has declined significantly over the last century.
