Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

User information

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- P preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published
- * significantly different from reference category ($p < 0.05$)

Note on CANSIM

Data that appears in the **The Consumer Price Index** (catalogue no. 62-001-X) are also available electronically, free of charge under the *Statistics Canada Open Licence Agreement*, in our CANSIM (Canadian Socio-Economic Information Management System) database through the Internet, under tables 326-0009, 326-0012, 326-0015, 326-0020, 326-0021 and 326-0022. In general, *CANSIM* provides a longer historical series. For further information on *CANSIM* call 1-800-263-1136.

Study of crude oil and gasoline prices

The influence of crude oil prices on provincial variations in gasoline price changes in the Consumer Price Index (CPI) since 2011

Consumer spending on gasoline accounts for a relatively large share of total household expenditures. At 5.8%, gasoline is one of the largest weighted items in the 2009 basket of goods and services for the Consumer Price Index (CPI). This means that Canadians spent on average 5.8% of their total household budget on gasoline.

As a result, changes in gasoline prices can exert significant upward or downward pressure on consumer price inflation, as measured by the CPI.

Differences in the rate at which gasoline prices change across provinces can lead to differences in the overall rates of change in consumer price indices in different parts of the country.

For much of the last decade, changes in gasoline prices in Canada have been similar across provinces. A reason for these comparable price movements is that changes in the cost of crude oils have had similar effects on changes in the prices of petroleum products, including gasoline, in different parts of the country.

Of all factors that determine the final retail price for gasoline in Canada, the cost of crude oil accounts for the largest proportion (48%), according to MJ Ervin & Associates Inc. petroleum price data for September 2012.

However, starting in 2011, divergence between provincial gasoline price indices expanded and became the largest variation observed in the last decade (chart 1).

To shed light on diverging movements in gasoline prices across Canada, this paper examines the crude oil benchmarks that influence prices in different segments of Canada's crude oil and gasoline refining markets. It also looks at how the recent divergence in crude oil benchmarks coincides with relative changes in gasoline prices across the country.

Chart 1

Gasoline consumer price indices for select provinces, January 2000 - September 2012

Note to readers

Heavy crude oil refers to oil which, compared to other types of oils, has a high density and does not flow easily.

Light oil refers to oil which, compared to other types of oils, has a low density and flows easily.

The terms 'sweet' and 'sour' are used to describe a crude oil's sulphur content. The New York Mercantile Exchange (NYMEX) designates oils with less than 0.42% sulphur content as sweet and oils with any higher sulphur content as sour.

The term 'landlocked' refers to crude oil which has limited ability to reach global markets as it must be transported through pipelines.

The term 'waterborne' refers to crude oils that are primarily transported to markets by oil tanker and as a result can be shipped to nearly any crude receiving marine terminal in the world.

Crude oil prices

Regardless of the source, crude oil prices are set in global and regional markets directed by supply and demand. Any actions or events which may affect the current or future supply and/or demand for oil will impact its price. Therefore, the price of crude oil (and by extension of gasoline) in Canada is influenced by foreign and domestic factors.

Not all crude oil is equal; quality plays an important role in pricing. Types of crude oil are usually differentiated by their density and sulphur content. The heavier the crude and the higher the sulphur content, the lower the quality and price, as more refining will ultimately be required to produce gasoline and other distillates.

Given that there are so many different varieties and grades of crude oil, benchmarks are often used to set crude prices. There are two crude benchmarks which Canadian refiners are likely to encounter: West Texas Intermediate (WTI), and Brent.

WTI is the price benchmark for North American-produced crude oil. It represents high quality light, sweet crude oil that can easily be refined into motor vehicle fuel. Since most crude oils benchmarked to WTI must be transported by pipeline, they cannot easily reach global markets and are thus considered to be 'landlocked' (Natural Resources Canada).

Brent is a price benchmark for crude oil coming primarily from Europe's North Sea. Brent is not as light or as sweet as WTI, but it is still a high-grade crude. It requires more refining, relative to WTI, to create gasoline.

Since the majority of crude oil benchmarked to Brent is capable of being shipped to nearly any oil receiving marine terminal in the world, Brent is considered 'waterborne' (MJ Ervin & Associates Inc., April 2012). Brent is the leading global benchmark for crude prices given its ability to reach foreign markets.

Gasoline and fuel oil market in Canada

While Canada is a large and growing net exporter of crude oil, crude imports represent roughly half of the country's petroleum refinery supply. In 2011, imported crude oil accounted for 40.7% of crude supplied to Canadian oil refiners (Statistics Canada, CANSIM Table 134-0001).

For some refiners, particularly those in Eastern Canada, it is more economical to use imported crude oil. This is because of logistical challenges and high costs associated with transporting crude oil across the country, as well as the extensive availability of 'waterborne' crudes (Natural Resources Canada, February 2012).

Refiners in Western Canada process domestically produced crude oil, while Ontario refiners often use a mixture of domestic and imported crude oil. The availability and use of both domestic and imported crudes make the crude oil economy in Canada a dual market (Natural Resources Canada).

Canadian petroleum refiners, regardless of whether they refine domestic or imported crude oil, are 'price takers'. This means that the price they pay for crude oil is based on benchmarks set in regional and global markets. Refineries that run domestically produced crude are more likely to face prices benchmarked to WTI. Users of imported crude oil generally pay prices that echo Brent (Natural Resources Canada, February 2012).

The use of various crude oils by Canadian refiners is not a recent phenomenon. Total receipts of crude oil supplied to Canadian refiners have been comprised of both domestic and imported crude since data were first collected in 1973.

The emergence of a price differential between crude oil benchmarks over the last two years highlights the dual structure of the crude oil market in Canada and can be associated with geographical differences in gasoline price movements.

Brent-WTI price differential

Historically, WTI crude has been priced slightly higher (US\$1-\$2 per barrel) than Brent because it requires less refining for gasoline. However, since WTI and Brent are crude oils of similar quality their prices typically move in unison. From January 2000 until the end of 2010, WTI and Brent prices followed each other closely (chart 2).

In 2011, the price differential between these two crude oil benchmarks has increased, reaching nearly US\$30 per barrel as of September 2011. This trend continued into 2012, averaging US\$18 per barrel at the end of September 2012.

Chart 2
Average monthly crude oil prices, January 2000 - September 2012

Source: U.S. Energy Information Administration. *Petroleum and Other Liquids, Data, Spot Prices*.
<http://www.eia.gov/>

There are a number of factors behind the price differential between WTI and Brent. The main reason for the emergence and continuation of the price gap is related to challenges of distribution facing the North American benchmark.

Since the beginning of 2011, Cushing, Oklahoma, the storage and distribution 'hub' for WTI, has experienced rising inventories. These have resulted primarily from an increase in shale oil drilling in the United States, as well as expanding supplies from Canada.¹ In addition, WTI prices have been influenced by relatively flat petroleum demand in North America (International Energy Agency, August 2012).

Finally, since crude can only be moved out of Cushing through pipelines, there has been limited ability to export the oil into global markets, particularly into regions with rising oil consumption, such as India and China (MJ Ervin & Associates Inc., April 2012).

Combined, these factors – supply glut, soft North American demand, and an inability to export to high consuming global markets – have put downward pressure on WTI crude prices.

While WTI prices have been subject to a number of downward pressures in the last couple of years, the Brent benchmark has been influenced by various upward pressures. The key difference between WTI and Brent is the ability of 'waterborne' crude oils benchmarked to Brent to reach countries with rising oil consumption.

Despite declining petroleum demand in Europe, the Brent benchmark price is influenced by rising global demand for oil (International Energy Agency, August 2012). Additionally, political instability in some crude producing countries in the Middle East and North Africa has raised concerns over future European oil supplies. This has put further upward pressure on the Brent benchmark price (Suncor Energy, September 2011).

1. Exports of Canadian crude oil into the United States, District II (district for Cushing, Oklahoma) has been on an upward trend since late 2010 (Statistics Canada, CANSIM Table 126-0001).

Overall, the presence of differing supply and demand conditions over the last couple of years has resulted in a price differential, the largest in at least three decades, between the WTI and Brent crude oil benchmarks.

Given that both WTI and Brent influence gasoline prices in Canada, the price gap that has emerged and persisted between the two benchmarks can have an impact on price change for gasoline across the country.

Impact of Brent-WTI price differential on Canadian petroleum products

For most of the past 10 years, changes in gasoline prices across Canada, as measured by provincial consumer price indices, have followed similar trends. However, around the same time that the WTI and Brent benchmarks began to diverge in 2011, a more notable variation between provincial gasoline indices emerged.

Chart 3

Gasoline price indices for select provinces and monthly average crude oil prices, January 2000 - September 2012

Source: Statistics Canada, Consumer Price Index (CPI), 2009 basket, CANSIM Table 326-0020 and U.S. Energy Information Administration. *Petroleum and Other Liquids, Data, Spot Prices*. <http://www.eia.gov/>

Chart 3 illustrates that over the past two years, the gasoline price indices for Western provinces, where domestically produced crude oil benchmarked to WTI is refined and distributed, followed monthly movements in WTI prices.

During the same period, changes in gasoline price indices for Central and Eastern provinces, where refiners use either imported or a mixture of domestic and imported crude oils, more closely reflected movements in Brent prices.

Summary

Since 2011, the variation between provincial gasoline price indices has expanded. Around the same time, a price differential has emerged between WTI and Brent, two crude oil price benchmarks.

Aside from crude oil, there are various other factors that determine the final 'pump price' of gasoline, such as taxes, and refinery and marketing margins, which this paper does not explore. However, of all the factors crude oil has the largest contribution to retail gasoline prices in Canada. Thus, changes in crude oil benchmark prices can impact the trends of gasoline price change across the country.

A dual crude oil market exists in Canada. Most refiners in the Western provinces process domestically produced crude. Refiners in Central and Eastern provinces run different proportions of imported crude. Differences between crude oil price benchmarks, such as the divergence between WTI and Brent, can contribute to variations between provincial gasoline price indices.

Gasoline represents a considerable proportion of the CPI basket and therefore can apply significant upward or downward pressure on the CPI's for Canada and the provinces. Accordingly, understanding the factors that can influence gasoline price movements in Canada is important in being able to explain variations in provincial gasoline price indices and overall CPI's.

Acknowledgements

Highlights

12-month change:

- Consumer prices rose 1.2% in the 12 months to October, matching the increases in August and September.
- Energy prices rose at a slower year-over-year rate in October compared with September, while air transportation, food purchased from stores and property taxes posted larger price gains.
- Consumer prices rose in every major component in the 12 months to October, except for clothing and footwear.
- The largest year-over-year increase in consumer prices in October occurred in Newfoundland and Labrador, while the smallest occurred in British Columbia.

Month-to-month change:

- On a seasonally adjusted monthly basis, the CPI increased 0.3% in October after rising 0.2% in September.
- On a monthly basis and before seasonal adjustment, the CPI rose 0.2% in October, matching the increases in August and September.

Bank of Canada's Core Index:

- The Bank of Canada's core index rose 1.3% in the 12 months to October matching the increase in September.

Main contributors to the 12-month change in the CPI:

Main upward contributors:

- Gasoline (+4.0%)
- Meat (+5.1%)
- Food purchased from restaurants (+2.1%)
- Property taxes (+2.8%)
- Homeowners' replacement cost (+2.2%)

Main downward contributors:

- Mortgage interest cost (-2.6%)
- Natural gas (-11.6%)
- Women's clothing (-3.8%)
- Video equipment (-13.2%)
- Computer equipment, software and supplies (-4.6%)

Main contributors to the monthly change in the CPI, not seasonally adjusted:

Main upward contributors:

- Property taxes (+2.8%)
- Purchase of passenger vehicles (+1.3%)
- Natural gas (+2.8%)
- Fresh fruit (+3.4%)
- Bakery products (+2.0%)

Main downward contributors:

- Traveller accommodation (-8.3%)
- Gasoline (-1.2%)
- Electricity (-0.8%)
- Mortgage interest cost (-0.4%)
- Dairy products (-0.9%)

Analysis

Consumer prices rose 1.2% in the 12 months to October, matching the increases in August and September. Energy prices rose at a slower year-over-year rate in October compared with September, while air transportation, food purchased from stores and property taxes posted larger price gains.

Energy prices

Energy prices advanced 1.7% in the 12 months to October after rising 2.9% in September. This slower increase was led by smaller price gains for electricity and gasoline.

Chart 1
The 12-month change in the energy index

The cost of electricity increased 1.7% on a year-over-year basis in October after rising 6.0% in September. This smaller increase in the electricity index was due to price declines recorded in Alberta.

Gasoline prices rose 4.0% in the 12 months to October, following a 4.7% increase in September. Prince Edward Island had the largest year-over-year increase (+9.0%), while British Columbia had the smallest (+0.3%).

Natural gas prices declined 11.6% in the 12 months to October after decreasing 14.2% in September. Despite a monthly price increase, the natural gas index was one of the largest downward contributors to the year-over-year change in the All-items Consumer Price Index (CPI) in October.

Chart 2

The 12-month change in the Consumer Price Index (CPI) and the CPI excluding energy

Excluding energy, the CPI rose 1.1% in the 12 months to October, after rising 0.9% in September.

12-month change in the major components

Consumer prices rose in every major component in the 12 months to October, except for clothing and footwear.

Chart 3

Prices rise in every major component except clothing and footwear

Food prices rose 2.0% in the 12 months to October, following a 1.6% increase in September. The October increase was led by year-over-year price gains for meat (+5.1%) and food purchased from restaurants (+2.1%).

Prices for transportation rose 1.7% on a year-over-year basis in October, after rising 1.6% in September. The increase in the transportation component in October was led by price gains for gasoline. Consumers also paid more for air transportation.

Shelter costs increased 0.9% in the 12 months to October after rising 1.2% in September. Consumers paid 2.8% more in property taxes. Homeowner's replacement cost and rent also increased. Conversely, mortgage interest cost decreased 2.6%, continuing a pattern of year-over-year declines observed since 2009.

12-month change in the provinces

The largest year-over-year increase in consumer prices in October occurred in Newfoundland and Labrador, while the smallest occurred in British Columbia.

Chart 4

Prices grow at the fastest rate in Newfoundland and Labrador and the slowest in British Columbia

Prices in Newfoundland and Labrador rose 2.2% in the 12 months to October, a full percentage point above the national average of 1.2%. This difference was mainly attributable to larger year-over-year price increases in Newfoundland and Labrador for food purchased from stores and electricity. Additionally, since natural gas is not widely consumed in the province, the downward contribution of natural gas recorded for Canada in October is not a factor in the province's All-items CPI.

Consumer prices in British Columbia increased 0.5% in the 12 months to October, after rising 0.7% in September. In addition to recording the smallest year-over-year price increase for gasoline, British Columbia also posted a decline in homeowner's replacement cost.

In Alberta, consumer prices rose 0.6% on a year-over-year basis in October after advancing 1.4% in September. This slower increase in the Alberta CPI in October compared with September was due to price decreases for electricity.

Seasonally adjusted monthly CPI increases

On a seasonally adjusted monthly basis, the CPI increased 0.3% in October after rising 0.2% in September.

Chart 5

Seasonally adjusted Consumer Price Index increases

The seasonally adjusted index for transportation advanced 0.9% matching the increase in September. The food index rose 0.5% in October after declining 0.2% the previous month. The index for recreation, education and reading was the only major component to record a decrease, while the clothing and footwear index posted no change.

Non-seasonally adjusted monthly CPI increases

On a monthly basis and before seasonal adjustment, the CPI rose 0.2% in October, matching the increases in August and September.

In addition to higher property taxes, the October CPI was led by a 1.3% monthly price increase for the purchase of passenger vehicles. In contrast, price declines were recorded for traveller accommodation (-8.3%), gasoline (-1.2%) and electricity (-0.8%).

Prices for clothing and footwear increased 1.5% in October after rising 4.2% in September as winter merchandise continued to be introduced across the country.

The cost of food rose 0.2% in October following a 1.1% decrease in September. Notable price increases were recorded for fresh fruit and bakery products, while dairy products and non-alcoholic beverages declined.

On a provincial basis, consumer prices rose in seven provinces, the exceptions being Nova Scotia, New Brunswick and British Columbia where prices edged down in October.

Bank of Canada's core index

The Bank of Canada's core index rose 1.3% in the 12 months to October matching the increase in September.

On a month-to-month basis and before seasonal adjustment, the core index went up 0.3% in October after increasing 0.2% in September.

On a monthly basis, the seasonally adjusted core index increased 0.1% in October after posting no change in September.

Note to readers

The special aggregate "Energy" includes: electricity; natural gas; fuel oil and other fuels; gasoline; and fuel, parts and supplies for recreational vehicles.

The Bank of Canada's core index excludes eight of the Consumer Price Index's most volatile components (fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies) as well as the effects of changes in indirect taxes on the remaining components.

A seasonally adjusted series is one from which seasonal movements have been eliminated. Users employing Consumer Price Index data for indexation purposes are advised to use the unadjusted indexes. For more information on seasonal adjustment, see *Seasonal adjustment and identifying economic trends*.

- *Consumer Price Index, historical summary*
- *Economic indicators, by province and territory (monthly and quarterly)*

For further reading

Detailed information on the methodology and concepts of the CPI is contained in ***The Consumer Price Index Reference Paper, Updating Based on 1992 Expenditures***, (Occasional), catalogue no. 62-553-X.

Information regarding the Household Spending Survey is contained in the: ***Spending Patterns in Canada, 2009***, catalogue no. 62-202-X.

A brief non-technical document entitled ***Your Guide to the Consumer Price Index*** (Occasional) catalogue no. 62-557-X answers the frequently asked questions about the construction and use of the CPI.

For further information, contact the Consumer Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-951-9606), or you can also search through the Statistics Canada catalogue which lists all current products and services available from Statistics Canada.

Table 14
Average retail prices, monthly, Canada

	CANSIM vector number	August 2012	September 2012	October 2012
dollars ¹				
Round steak, 1 kilogram	(v735165)	14.31	14.20	14.21
Sirloin steak, 1 kilogram	(v735176)	17.76	17.52	17.39
Prime rib roast, 1 kilogram	(v735187)	23.74	24.36	22.45
Blade roast, 1 kilogram	(v735198)	11.34	11.19	11.31
Stewing beef, 1 kilogram	(v735209)	11.35	11.00	11.08
Ground beef, regular, 1 kilogram	(v735220)	9.10	9.02	9.10
Pork chops, 1 kilogram	(v735221)	10.81	10.53	10.81
Chicken, 1 kilogram	(v735223)	6.90	6.95	7.07
Bacon, 500 grams	(v735166)	5.14	5.18	5.17
Wieners, 450 grams	(v735167)	3.45	3.37	3.56
Canned sockeye salmon, 213 grams	(v735168)	3.69	3.66	3.79
Homogenized milk, 1 litre	(v735169)	2.40	2.39	2.39
Partly skimmed milk, 1 litre	(v735170)	2.30	2.30	2.30
Butter, 454 grams	(v735171)	4.38	4.35	4.35
Processed cheese food slices, 250 grams	(v735172)	2.79	2.82	2.86
Evaporated milk, 385 millilitres	(v735173)	1.93	1.87	1.83
Eggs, 1 dozen	(v735174)	3.15	3.17	3.21
Bread, 675 grams	(v735175)	2.76	2.70	2.76
Soda crackers, 450 grams	(v735177)	2.76	2.68	2.68
Macaroni, 500 grams	(v735178)	1.48	1.46	1.46
Flour, 2.5 kilograms	(v735179)	5.38	5.30	4.93
Corn flakes, 675 grams	(v735180)	5.18	5.05	5.25
Apples, 1 kilogram	(v735181)	3.83	3.84	3.89
Bananas, 1 kilogram	(v735182)	1.71	1.64	1.70
Grapefruits, 1 kilogram	(v735183)	3.13	3.27	3.46
Oranges, 1 kilogram	(v735184)	2.91	2.80	2.83
Apple juice, canned, 1.36 litres	(v735185)	2.15	2.09	2.16
Orange juice, tetra-brick, 1 litre	(v735186)	3.92	3.96	3.86
Carrots, 1 kilogram	(v735189)	1.71	1.65	1.56
Celery, 1 kilogram	(v735190)	2.20	2.09	1.91
Mushrooms, 1 kilogram	(v735191)	8.22	7.86	7.87
Onions, 1 kilogram	(v735192)	1.77	1.69	1.60
Potatoes, 4.54 kilograms	(v735193)	5.77	5.30	5.08
French fried potatoes, frozen, 1 kilogram	(v735194)	2.47	2.46	2.48
Baked beans, canned, 398 millilitres	(v735195)	1.23	1.23	1.22
Tomatoes, canned, 796 millilitres	(v735196)	1.55	1.50	1.49
Tomato juice, canned, 1.36 litres	(v735197)	2.41	2.41	2.31
Ketchup, 1 litre	(v735199)	3.20	3.30	3.28
Sugar, white, 2 kilograms	(v735200)	3.19	3.11	3.07
Coffee, roasted, 300 grams	(v735201)	5.97	6.07	5.89
Coffee, instant, 200 grams	(v735202)	6.54	6.57	6.50
Tea (72 bags)	(v735203)	4.41	4.22	4.27
Cooking or salad oil, 1 litre	(v735204)	4.18	4.13	4.17
Soup, canned, 284 millilitres	(v735205)	1.05	0.99	1.01
Baby food, 128 millilitres	(v735206)	0.85	0.85	0.85
Peanut butter, 500 grams	(v735207)	3.90	3.88	3.93
Fruit flavoured crystals, 2.25 litres	(v735208)	1.43	1.45	1.45
Soft drinks, cola type, 2 litres	(v735210)	1.98	1.97	1.92
Soft drinks, lemon-lime type, 2 litres	(v735211)	1.92	1.86	1.82
Paper towels (2 rolls)	(v735213)	2.59	2.64	2.65
Facial tissue (200 tissues)	(v735214)	2.20	2.26	2.26
Bathroom tissue (4 rolls)	(v735215)	2.63	2.66	2.67
Shampoo, 300 millilitres	(v735216)	4.22	3.89	3.87
Deodorant, 60 grams	(v735217)	4.71	4.42	4.45
Toothpaste, 100 millilitres	(v735218)	2.63	2.43	2.38
Cigarettes (200)	(v735219)	84.15	84.17	84.09
Regular, unleaded gasoline at self-service stations, cents per litre	(v41838376)	128.4	131.1	129.3

Explanatory notes for tables

Table 1 The Consumer Price Index, major components and special aggregates, Canada, not seasonally adjusted

1. 2009 Consumer Price Index (CPI) basket weights at April 2011 prices, Canada.
2. Figures may not add to 100% due to rounding.
3. The Bank of Canada's core index excludes eight of the Consumer Price Index's most volatile components (fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies) as well as the effects of changes in indirect taxes on the remaining components. For additional information on core CPI, please consult the Bank of Canada website: <http://www.bankofcanada.ca/rates/indicators/key-variables/inflation-control-target/>.

Table 2 The Consumer Price Index, major components and special aggregates, Canada, seasonally adjusted

1. 2009 Consumer Price Index (CPI) basket weights at April 2011 prices, Canada.
2. A seasonally adjusted series is one from which seasonal movements have been eliminated. Each month, the previous month's seasonally adjusted index is subject to revision. On an annual basis, the seasonally adjusted values for the last three years are revised with the January data release. Users employing Consumer Price Index data for indexation purposes are advised to use the unadjusted indexes. For more information on the availability and uses of seasonally adjusted CPI data, please see the, see the *Definitions, data sources and methods* section of survey 2301.
3. The Bank of Canada's core index excludes eight of the Consumer Price Index's most volatile components (fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies) as well as the effects of changes in indirect taxes on the remaining components. For additional information on core CPI, please consult the Bank of Canada website: <http://www.bankofcanada.ca/rates/indicators/key-variables/inflation-control-target/>.

Table 3 The Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. Previous to April 1, 1999, the town of Iqaluit formed part of the Northwest Territories. On April 1, 1999, the town of Iqaluit formed part of the newly-created territory of Nunavut.

Table 4 The Consumer Price Index, major components and selected sub-groups, Canada, not seasonally adjusted

Table 4-2

1. In July 2004, the 2001 basket weights introduced with the January 2003 data were adjusted; the weights for mortgage interest cost were re-evaluated.

2. Due to changes in the Ontario electricity market that became effective May 1, 2002, it was necessary to adjust the treatment of electricity prices in the Consumer Price Index (CPI) for that province. A question and answer fact sheet that explains those changes is now available. To obtain the fact sheet on the treatment of electricity prices in Ontario, please contact CPD Dissemination Unit, Consumer Prices Division, telephone: (613) 951-9606, toll-free: 1-866-230-2248, fax: (613) 951-2848, e-mail: cpd-info-dpc@statcan.gc.ca.

Table 4-5

1. In previous years, Statistics Canada updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. Since 2008, this quality adjustment exercise is reflected in the month of May for all provinces.

Table 4-7

1. From April 2006, Statistics Canada changed its implementation of the price index formula used for traveller accommodation. As a result, data from April 2006 are not strictly comparable to earlier time periods.

Table 5 The Consumer Price Index for Canada, all-items CPI, not seasonally adjusted, historical data

1. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers. Between May 2007 and September 2007, the annual average percentage changes in Table 5 were calculated based on annual average indexes that were not rounded. As a result, some percentage changes were different by +/- 0.1 from the official percentage change. This problem only affected the annual average column of Table 5.

Table 6 Core Consumer Price Index (CPI) (Bank of Canada definition), not seasonally adjusted, historical data

1. The Bank of Canada's core index excludes eight of the Consumer Price Index's most volatile components (fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies) as well as the effects of changes in indirect taxes on the remaining components. For additional information on core CPI, please consult the Bank of Canada website: <http://www.bankofcanada.ca/rates/indicators/key-variables/inflation-control-target/>.
2. The annual average index is calculated as the average of the published 12 individual monthly indexes, rounded to one decimal place. Percentage changes between the annual average indexes are calculated based on these published rounded numbers.

Table 7 The Consumer Price Index for Canada, major components and special aggregates, not seasonally adjusted, historical data

1. Goods are physical or tangible commodities usually classified according to their life span into non-durable goods, semi-durable goods and durable goods. Non-durable goods are those goods that can be used up entirely in less than a year, assuming normal usage. For example, fresh food products, disposable cameras and gasoline are non-durable goods. Semi-durable goods are those goods that may last less than 12 months or greater than 12 months depending on the purpose to which they are put. For example, clothing, footwear and household textiles are semi-durable goods. Durable goods are those goods which may be used repeatedly or continuously over more than a year, assuming normal usage. For example, cars, audio and video equipment and furniture are durable goods.

2. A service in the Consumer Price Index (CPI) is characterized by valuable work performed by an individual or organization on behalf of a consumer, for example, car tune-ups, haircuts and city public transportation. Transactions classified as a service may include the cost of goods by their nature. Examples include food in restaurant food services and materials in clothing repair services.
3. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
4. The annual index level is the average of the 12 individual monthly indexes.

Table 8 Annual average percentage changes for the Consumer Price Index

Table 8-1

Table 9-12

1. The special aggregate "energy" includes: "electricity", "natural gas", "fuel oil and other fuels", "gasoline", and "fuel, parts and supplies for recreational vehicles".
2. Part of the increase first recorded in the shelter index for Yellowknife for December 2004 inadvertently reflected rent increases that actually occurred earlier. As a result, the change in the shelter index was overstated in December 2004, and was understated in the previous two years. The shelter index series for Yellowknife has been corrected from December 2002. In addition, the Yellowknife all-items Consumer Price Index (CPI) and some Yellowknife special aggregate index series have also changed. Data for Canada and all other provinces and territories were not affected.
3. In previous years, Statistics Canada updated, by province, the model year of passenger vehicles used in the calculation of the passenger vehicle insurance premiums index over a three month period. Since 2008, this quality adjustment exercise is reflected in the month of May for all provinces.

Table 10 The all-items Consumer Price Index, provinces, Whitehorse, Yellowknife and Iqaluit, not seasonally adjusted, historical data

1. Data for Iqaluit are on a December 2002=100 base (200212=100) and the Standard Geographical Classification (SGC) 2001. 2. The annual index level is the average of the 12 individual monthly indexes.

Table 11 The Consumer Price Index and selected sub-groups, by urban centre, not seasonally adjusted

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Urban centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart is used except in the cases of Montréal, Toronto, and Vancouver, where a sub-provincial counterpart is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.
2. Formerly Ottawa (Ottawa-Gatineau, Ontario part), represents Ottawa only.

Table 12 The all-items Consumer Price Index by urban centre, not seasonally adjusted, historical data

1. With the introduction of the 1992 basket in January 1995, emphasis was shifted from urban centre data to provincial data. Table 14 Average retail prices, monthly, Canada

- Prices are expressed in dollars, except for the price of gasoline which is expressed in cents per litre.

Average retail prices for food, household supplies, personal care items, cigarettes and gasoline

Table 14 shows, for the current month and the two previous months, average prices for selected food, household supplies, personal care items, cigarettes and for gasoline.

Prices for these items are collected as part of the regular monthly CPI survey. Prices for the selected food, household supply and personal care items are observed in food supermarkets, while prices for cigarettes are collected in supermarkets, department stores, drug stores and tobacco shops. Average prices for each commodity are calculated as a weighted average of the average prices in the observed urban centres using the population of these urban centres as weights.

The commodities which are priced can vary in quality between outlets or between urban centres. This is the reason why average prices are not published for each of those urban centres. Brands and outlets can also vary from month to month. Therefore, average prices may not necessarily be fully comparable from one month to another and should not be used as an appropriate measure of pure price change through time. A matched commodity and outlet sample is used for the CPI to determine the pure price movement of commodities through time.

Table 15 Inter-city indexes of price differentials, as of October 2011, of consumer goods and services

Purpose and Scope

Table 15 shows estimates of price differences between 11 Canadian cities in all 10 provinces, as of October 2011. These estimates are based on a selection of commodities (goods and services) purchased by consumers in each of the 11 cities.

These estimates should not be interpreted as a measure of differences in the cost-of-living between cities. The indexes provide price comparisons for a selection of commodities only, and are not meant to give an exhaustive comparison of all goods and services purchased by consumers. Additionally, the shelter price concept used for these indexes is not conducive to making cost-of-living type comparisons between cities (see below).

Methodology

In order to produce optimal Inter-city indexes, commodity comparisons were initially made by pairing cities that are in close geographic proximity. The resulting price level comparisons were then extended to include comparisons between all of the cities, using a chaining procedure. The following initial pairings were used:

St. John's	Halifax
Charlottetown-Summerside	Halifax
Saint John	Halifax
Halifax	Ottawa
Montréal	Toronto
Ottawa	Toronto
Toronto	Winnipeg
Regina	Winnipeg
Edmonton	Winnipeg
Vancouver	Edmonton

Reliable Inter-city price comparisons require that the selected commodities be very similar across cities. This ensures that the variation in index levels between cities is due to pure price differences and not to differences in the attributes of the commodities, such as size and/or quality.

Within each city pair, commodity price quotes were matched on the basis of detailed descriptions. Whenever possible, commodities were matched by brand, quantity and with some regard for the comparability of retail outlets from which they were selected.

Additionally, the target prices for this study are final prices and as such, include all sales taxes and levies applied to consumer commodities within a city. This can be an important source of variation when explaining differences in inter-city price levels.

It should be noted that price data for the Inter-city indexes is drawn from the sample of monthly price data collected for the Consumer Price Index (CPI). Given that the CPI sample is optimized to produce accurate price comparisons through time, and not across regions, the number of matched price quotes between cities can be small. It should also be noted that, especially in periods when prices are highly volatile, the timing of the commodity price comparison can significantly affect city-to-city price relationships.

The weights used for aggregating the city indexes into the all-items Inter-city index are based on the expenditures of consumers living in each of the 11 cities. The weights are currently based on 2009 consumer expenditure data.

The Inter-city index for a particular city is compared to the weighted average of all 11 cities, which is equal to 100. For example, an index value of 102 for a particular city means that prices for the measured commodities are 2% higher than the weighted, combined city average.

Additional Information on Shelter

Shelter prices were absent from the Inter-city index program prior to 1999 because of methodological and conceptual issues associated with their measurement. The diverse nature of shelter means that accurate matches between cities are often difficult to make.

To account for some of these difficulties, a rental equivalence approach is used to construct the Inter-city price indexes for owned accommodation. Such an approach uses market rents as an approximation to the cost of the shelter services consumed by homeowners in each city. It is important to note that this approach may not be suitable for the needs of all users. For instance, since the rental equivalence approach does not represent an out-of-pocket expenditure, the indexes should not be used for measuring differences in the purchasing power of homeowners across cities.

Footnotes for Table 15

1. The weights shown are rounded 2009 basket weights at April 2011 prices for Canada. They are provided for illustration only; the weights actually used are combined city weights with adjustments for price changes up until October 2011.
2. Includes the following subgroups: sugar and syrup, confectionery items, margarine, other edible fat and oil items, coffee, tea, condiments, spices and vinegar, soup, infant and junior foods, pre-cooked frozen food preparations, non-alcoholic beverages and all other food preparations.

Data quality, concepts and methodology

Definition

The Consumer Price Index (CPI) is an indicator of the changes in consumer prices experienced by the target population. The CPI measures price change by comparing, through time, the cost of a fixed basket of commodities. This basket is based on the expenditures of the target population in a certain reference period, currently 2009. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price movements.

Separate CPIs are published for Canada, the ten provinces, Whitehorse, Yellowknife and Iqaluit. Some CPI information is also available for an additional sixteen urban centres. Since the CPI is a measure of price change from one time period to another, it cannot be used to indicate differences in price levels between provinces or urban centres.

Population coverage

The population targeted by the CPI consists of families and individuals living in urban and rural private households. For practical reasons, residents of the Territories outside Whitehorse, Yellowknife and Iqaluit are not represented by the index. Prior to February 1995, the target population consisted of private households in Canadian urban centres with a population of 30,000 or more.

Time base

The CPI compares, in percentage terms, prices in any given time period to prices in the official base period which, at present, is 2002=100. The official time base was changed from 1992=100 to 2002=100 starting with the CPI for May 2007. The change is strictly an arithmetic conversion which alters the index levels but leaves the percentage changes between any two periods intact, except for differences in rounding.

Percent versus index point changes

The movements of the indexes from one month to another are expressed as percent changes rather than changes in index points. Index point changes are affected by the level of the index which, in turn, depends on the time base of the particular index. The percentage change between any two time periods can be readily calculated by dividing the index point difference between the two time periods by the index for the earlier period and multiplying the result by one hundred.

Price coverage

The prices used in the CPI calculation are final prices, inclusive of excise and other indirect taxes paid by consumers. In particular, they include the Goods and Services Tax (GST), as well as provincial retail sales taxes wherever applicable. In regions where the GST and provincial retail sales taxes have been combined, the Harmonized Sales Tax (HST) is included. It follows that the CPI can change as a result of modifications to any of these taxes.

The selection of commodities and the outlets from which prices are collected is judgmental, other than for rents and traveler accommodation. The number of prices required for a given commodity depends on the importance and the nature of the commodity. The samples are designed to represent volume selling commodities and outlets.

The principal objective of the sample design is to ensure an informative, reliable and impartial picture of consumer inflation at the national and provincial levels.

Price collection for a given month's index is carried out during the first three weeks of the month. Although prices for most CPI commodities are collected monthly, prices for commodities having less frequent price changes (e.g. property taxes and electricity rates) are collected at intervals longer than one month. Special pricings are carried out where there is evidence that significant price changes have occurred between scheduled pricing periods.

Weights and linking

The CPI maintains fixed quantitative proportions (weights) between commodities during the life of a given basket. The baskets are updated periodically to take into account changes in consumer expenditure patterns. In May 2011, the basket reflecting the 2009 expenditure patterns replaced the 2005 basket. The continuity of the CPI series is maintained by "linking" the corresponding indexes obtained from consecutive baskets.

The CPI is calculated as a weighted average of specified commodity price indexes. The weights are derived from Survey of Household Spending data. Text table 1 compares the expenditure shares of the two most recent CPI baskets, i.e. the 2009 basket as it was reflected in the CPI in May 2011 and the 2005 basket. Because both sets of weights are expressed in April 2011 or "link month" prices, the differences reflect the shifts in the relative quantities purchased between the two baskets.

When reconstructing or re-aggregating published CPI series, the changes in weights and the linking procedures must be taken into account. For a description of the methodology required to reconstruct or re-aggregate CPI series, see **The Consumer Price Index Reference Paper** catalogue no. 62-553-X (Occasional) or contact Consumer Prices Division.

Text table 1

Comparison of the 2009 and 2005 distribution¹ of expenditures used in the Consumer Price Index, by major component, for Canada

	2009 Expenditures		2005 Expenditures
	Expressed in 2009 prices	Expressed in April 2011 prices	Expressed in April 2011 prices
	percent		
Major Components			
All-Items CPI	100.0	100.0	100.0
Food	16.1	16.0	18.0
Shelter	27.5	27.5	26.7
Household operations, furnishings and equipment	11.8	11.6	11.0
Clothing and footwear	5.6	5.3	4.8
Transportation	19.3	20.6	19.8
Health and personal care	5.0	5.0	4.8
Recreation, education and reading	11.8	11.2	11.8
Alcoholic beverages and tobacco products	3.0	2.9	3.1

1. Figures may not add to 100% due to rounding.

Bank of Canada's core index

Starting with the October 2006 Consumer Price Index (CPI), Statistics Canada produces and disseminates the Core CPI as defined by the Bank of Canada.

The Bank of Canada's core index excludes eight of the Consumer Price Index's most volatile components (fruit, fruit preparations and nuts; vegetables and vegetable preparations; mortgage interest cost; natural gas; fuel oil and other fuels; gasoline; inter-city transportation; and tobacco products and smokers' supplies) as well as the effects of changes in indirect taxes on the remaining components. For additional information on core CPI, please consult the Bank of Canada website: <http://www.bankofcanada.ca/rates/indicators/key-variables/inflation-control-target/>.

Statistics Canada also calculates, on behalf of the Bank of Canada, a seasonally adjusted Core CPI. This series is available through *CANSIM*, Statistics Canada's official database, or by contacting us through the means mentioned on the inside cover of this publication.

Whitehorse, Yellowknife and Iqaluit indexes

The relatively small size of the housing market in these three cities makes it difficult to construct reliable price indexes for new houses. To compensate, the price movements of rental accommodation are used to approximate the price movements of new houses. The rent information itself is collected using different pricing frequencies and collection methods than in the rest of the country. Because of these problems, the indexes for Rented Accommodation and Owned Accommodation are not published for these three cities. Further, the all-items indexes published for these three cities are not strictly comparable with the same indexes for the provinces or the other sixteen cities.

Calculation of urban centre indexes

With the introduction of the 1992 basket, emphasis was shifted from urban centre data to provincial data. Urban Centre all-items series were continued since many users had come to rely on this service, but the method of calculation was changed. Shelter indexes are calculated for each urban centre. This recognizes the importance of Shelter in the basket, the significant and persistent differences in price movements between urban centres, and the availability of local data. For the other seven major components, the movement of the provincial counterpart (or, in the cases of Montréal, Toronto, and Vancouver, a sub-provincial counterpart) is used. The major components are aggregated using the urban centre's expenditure pattern to arrive at each urban centre's all-items index.

Seasonal adjustment

A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as variations in climate and regular institutional events such as vacations and statutory holidays. Seasonally adjusted series are calculated using Statistics Canada's X-12 ARIMA program. Time series with no detectable seasonal movements remain unchanged from the official series. The official unadjusted series for all-items index, core consumer price index, each of the eight major component indexes and three special aggregates (all-items excluding food, all-items excluding food and energy and all-items excluding 8 of the most volatile components (Bank of Canada definition) are seasonally adjusted independently.

Each month, the previous month's seasonally adjusted index is subject to revision. On an annual basis, the seasonally adjusted values for the last three years are revised with the January data release. Since these revisions can lead to changes in both the levels and movements of the indexes, users employing the CPI for indexation purposes are advised to use the unadjusted indexes.

Appendix I

Concordance tables

Table A

Vector numbers for the average retail prices for gasoline and fuel oil, by urban centre

	St. John's, N.L.	Charlottetown and Summerside, P.E.I.	Halifax, N.S.	Saint John, N.B.	Québec, Que.	Montréal, Que.	Ottawa, Ont.	Toronto, Ont.	Thunder Bay, Ont.	Winnipeg, Man.
