Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued co-operation and goodwill.

Standard symbols

The following symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- .. not applicable
- 0 true zero or a value rounded to zero
- value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the Statistics Act
- E use with caution
- F too unreliable to be published
- * significantly different from reference category (p < 0.05)

Introduction

For the fifth time, in 2011, the General Social Survey (GSS) collected detailed information on families in Canada. Previous GSS surveys on this topic were conducted in 1990, 1995, 2001 and 2006. The 2011 survey updated most of the information collected in previous surveys, including leaving the family home, conjugal history (marriages, common-law unions, separations and divorces), children (biological, adopted or step), maternity and parental leave, childcare arrangements, intentions to form (or re-form) a union, fertility intentions, custody and financial support agreements and work history. As in all GSS surveys, data were also collected on the respondent's main activity, education and other socio-demographic characteristics. The 2011 GSS data can be used for cross-sectional and retrospective analyses (i.e. tracking the different family histories and trajectories followed by men and women).

The target population includes all people aged 15 and over living in a private household in Canada¹.

Now that the survey collection has finished for this fifth GSS cycle on families, it's time to present a few highlights. The present publication consists of an article and selected tables. The article² focuses on the situation of parents and stepparents, who become members of a stepfamily. The article examines the types of stepfamilies respondents live in, their conjugal history and their socieconomic characteristics.

The selected tables examine different aspects of life as a couple, and as a family. Among other topics, first to be highlighted are intentions to form a/another union, couples living apart, and sterilization and infertility among Canadians. In addition, other tables cover the distribution of Canadians who live with their children, the use of childcare for pre-school and school-aged children, grandparenting, and children's primary residence following a breakup of their parents' union.

Respondents were asked about sterilization if they were in an intimate relationship with someone of the opposite sex, and if
either themselves or their partner was between the ages of 15 and 49.Respondents had to state that neither they nor their
partner was pregnant and that they did not intend to have a (another) child.

Sources: Statistics Canada, General Social Survey, 1995, 2001 and 2011.

^{2.} Respondents were asked about infertility if they were in an intimate relationship with someone of the opposite sex, and if either themselves or their partner was between the ages of 15 and 49. Respondents had to state that neither they nor their partner was pregnant and that they did not intend to have a (another) child. Included also are respondents who stated that they had not been sterilized and those who had been but did not state why.

Table 12
Distribution of parents of preschool-aged children by use of child care arrangement, Canada, 2011

| Used a child care arrangement ¹ for at least one of the pre-school aged children ² | Number (in thousands) | percentage |
|--|---|---|
| No | 1, 445 | 45 |
| Yes, but not on a regular basis | 167 | 5 |
| Yes, on a regular basis ³ | 1, 585 | 50 |
| Total | 3, 197 | 100 |
| Type of child care arrangement ⁴ | ••••••••••••••••••••••••••••••••••••••• | ••••••••••••••••••••••••••••••••••••••• |
| (Licensed) home daycare | 480 | 30 |
| Daycare | 489 | 31 |
| Preschool/nursery school | 137 | 9 |
| Private arrangement (relative, nanny, etc.) | 424 | 27 |
| Care by older brothers or sisters | Χ | X |
| Mix of different types of arrangements | 42 ^E | 3 E |
| Total | 1, 585 | 100 |

- 1. These are arrangements (paid or unpaid) made by parents when they cannot take care of their child or children during regular work hours, that is, because they are working, studying, doing volunteer work, etc. Although the question specifies "during regular work hours", it applies as much to parents who work as to those who do not and targets a full-time weekday reference period. These arrangements do not include the child care provided by the other parent (for example, when the couple is separated or divorced).
- 2. Children aged between 0 and 4.
- 3. An arrangement is considered on a regular basis if it is done at the same place each week. It could be, for example, every Friday or every day of the week.
- 4. Includes only parents who reported making a childcare arrangement on a regular basis.

Table 13
Distribution of parents of preschool-aged children according to their affiliation to a « Centre de la petite enfance », Quebec, 2011

| Type of daycare | Number (in thousands) | percentage |
|--|--------------------------|-----------------|
| Non-profit daycare centre (CPE) ¹ | 154 | 36 |
| Private daycare centre | 98 | 23 |
| Home-based daycare affiliated with a CPE | 110 | 26 |
| Home-based daycare not affiliated with a CPE | 49 ^E | 12 ^E |
| Mix of different types of daycare | X | X |
| Total | 425 | 100 |

^{1.} A "centre de la petite enfance (CPE)" is a non-profit or cooperative daycare centre where at least two thirds of the board of directors is made up of parents who use the service. CPEs offer lower cost spaces at their facility (7 \$ a day). CPEs provide care for children aged 0 to 5 while their parents are away and offer educational activities.

Through the "Centre de la petite enfance" and Other Child Care Services Act (1997), the Quebec government established a network of CPEs from the existing non-profit daycare centres and home daycares.

^{2.} This category includes parents with two or more children, who do not all live at the same primary residence.

Methodology

The target population for the GSS is persons 15 years of age and over residing in Canada, excluding the following two groups:

- 1. Residents of Yukon, Nunavut and the Northwest Territories
 - 2. Full-time residents of institutions

All GSS interviews are conducted by telephone. Households without landbased telephones were therefore excluded. In 2010, the proportion of households without telephone service was estimated at 1.1% (Residential Telephone Service Survey [RTSS], December 2010). Interviews were not conducted by cell phone, thus eliminating all individuals who had only cellular service. This group represents 13% of the population (RTSS, December 2010). Survey estimates were weighted to account for persons without telephones.

Data for Cycle 25 of the GSS were collected from February to November 2011 in five (non-overlapping) waves of two months each. The sample was evenly distributed over the 10 months and selected using the Elimination of Non-Working Banks technique, a Random Digit Dialling (RDD) method.

The response rate for Cycle 25 of the GSS was 65.8%. This was based on the 22,435 respondents. Statistical significance testing is available upon request.

Data limitations

It is worth noting that the figures appearing in this publication are estimates based on data collected from a small fraction of the population (roughly one person in 1,250) and are subject to error. There are two types of errors: sampling errors and non-sampling errors.

Sampling error is the difference between an estimate derived from the sample and the one that would have been obtained from a complete census using the same data collection methods. The size of the sampling error can be estimated from the survey results and an indication of the magnitude of this error. If the estimated sampling error is greater than 33% of the estimate, it is considered too unreliable to publish and the symbol "F" is printed in table cells where this occurs. Although not considered too unreliable to publish, estimates with an estimated error between 16.6% and 33.3% are marked "qualified" and used with caution. These are identified with an "E".

All other types of errors, such as coverage, response, processing and non-response errors, are non-sampling errors. It is difficult to identify and evaluate the scope of many of these errors.
