2004 Government On-Line Public Report

Prepared For: Treasury Board of Canada Secretariat

February 2005 (CIDM #444088)

Table of Content

Preamble	3
Overview	4
Aboriginal Employment	5
Environmental Management and Protection	6
First Nations and Inuit Transfer Payments	8
Indian Registry System/Certificate of Indian Status	0
Land Management	2
Northern Environmental Management and Protection	4
Northern Natural Resource Management	6
Northern Science and Technology and Circumpolar Liaison	7
On-line Access to Corporate Information	8

Preamble

In the October 12, 1999 Speech from the Throne, the Government of Canada committed to become a model user of information technology and the Internet. In keeping with this commitment the Government has set a target of putting the most frequently used services on-line by 2006. The information age and the advent of the Internet is dramatically changing the way Canadians do business and communicate. The Government of Canada recognizes the importance of information technology and the vast benefits of providing information and services to Canadians on-line.

Government On-Line (GOL) is the Government's plan to change the way that the government interacts with its citizens and businesses by using technology.

GOL is a key component in the federal government's plan to improve service delivery to Canadians by providing better access and seamless entry to a full range of government services and institutions.

To ensure the achievement of these service improvement goals, the implementation of GOL is guided by the following basic principles:

- Client driven services
- Convenient and accessible
- Consistent
- Responsive
- Private and secure

Indian and Northern Affairs Canada (INAC) is committed to the GOL Initiative.

The Department's GOL plans are contained in the *INAC 2004 GOL Public Report*. This report provides an overview of the initiative within the Department and describes planned action for each INAC GOL service.

Overview

Indian and Northern Affairs Canada (INAC) continues to improve access to departmental information and services, promote information exchange and the use of technology in Aboriginal and Northern communities, and to foster the creation of an e-Smart INAC.

The Department remains committed to meeting the 2005 Government of Canada deadline for the Government On-Line (GOL) Initiative. INAC has already met its commitments for services related to Land Management and Northern Science and Technology.

INAC is making effective and innovative use of its Internet presence to reach out to First Nations, Inuit and Northerners, as well as people around the world, to provide them with the services or information they are seeking.

The INAC GOL 2004 Public Report highlights each service and identifies the planned action for each of the following services.

- Aboriginal Employment Program
- Environmental Management and Protection
- First Nations and Inuit Transfer Payments
- Indian Registry System/Certificate of Indian Status
- Land Management
- Northern Environmental Management and Protection
- Northern Natural Resource Management
- Northern Science and Technology and Circumpolar Liaison
- On-line Access to Corporate Information

Questions or comments on the departmental public report are welcomed.

Aboriginal Employment

The Aboriginal Employment Program (AEP) was developed by INAC, in consultation with the Committee for the Advancement of Native Employment (CANE) and the Public Service Commission of Canada. The goal of the program is to increase representation of Aboriginal peoples at all levels in INAC and foster a climate which will provide opportunities for development, while promoting retention through the creation of an Aboriginal inventory.

The Aboriginal inventory is a recruitment tool which will enable Aboriginal candidates to register for employment on-line. The information captured in the inventory will improve INAC's ability to recruit employees in support of the departmental aboriginal employment objectives. As well, the inventory will provide recruitment support to other interested partners. In order to protect the privacy of inventory participants, access to the data will be limited to approved individuals.

The client group benefiting from this on-line service is Aboriginal peoples seeking employment at INAC.

Benefits to the client include convenient access to the service (i.e. clients can register at their preferred time and location), and immediate on-line acknowledgement of their registration.

The service can be accessed via the Aboriginal Peoples cluster under the Canadians gateway, or through the INAC Web site.

For more information about this service, please contact Kim Brant at (819) 994-6472 or via e-mail at reference@ainc-inac.gc.ca.

Achievements

A description of the Aboriginal Employment Program, including how to apply, and contact information are posted on the INAC Web site.

Future Plans

INAC plans to enhance this on-line service through the implementation of basic interactive on-line forms to capture competencies, and job skills for positions within INAC.

The details, timing and resourcing are uncertain at this time since a source of funding has yet to be secured.

Environmental Management and Protection

Through this service INAC manages and protects the natural environment of reserve lands in accordance with the *Indian Act*. This services consists of the following four sub-components:

- Administration of fuel storage tanks including registration, assessment and decommissioning;
- Administration of waste sites including regulation, assessment and decommissioning;
- Maintenance of an environmental assessment registry; and
- Management of contaminated sites including tracking environmental issues and remediation plans.

The client groups benefiting from this service include First Nation communities, departmental staff, and provincial and federal governments.

The service will provide clients the convenience of filing various environmental registrations on-line. Because the information collected is shared and easily accessible, it is anticipated that there will be improvements in data quality as well as savings in time for both the Department and the clients.

Components of this service can be accessed via the Aboriginal Peoples cluster under the Canadians gateway, or through the INAC Web site.

For more information about this service, please contact Steve Varette at (819) 997-0773 or via e-mail at reference@ainc-inac.gc.ca.

Achievements

The Environment and Natural Resources Web site was launched in fiscal year 2003-2004. The site offers client groups current information regarding environmental policies and directives.

Future Plans

INAC plans to undertake the following development work for this on-line service:

- Enhancements to the Environment and Natural Resources Web site including:
 - on-line registry of on-reserve environmental assessments
 - tracking of reserve waste sites
 - inventory of on-reserve natural resources
 - on-line interactive training material on environmental management and protection or reserve lands
- INAC is developing the Environmental Stewardship Strategy Information Management System (ESSIMS) which will provide timely, accurate, integrated and comprehensive environmental information for fuel storage tanks and contaminated site management to First Nations. Completion is targetted for the end of the 2004.

- To support this priority, INAC is seeking to modernize operations by developing an Indian and Inuit Affairs Program Environmental Management System. The implementation of this system is planned for fiscal year 2005/2006.
- The Department is also investigating the possibility of a partnership with Natural Resources Canada to provide cartographic interfaces to data on contaminated sites on reserves.

The details, timing and resourcing are uncertain at this time since a source of funding has yet to be secured.

First Nations and Inuit Transfer Payments

This service involves the transfer, in an emerging government-to-government relationship, of grants and contributions (\$5.2 billion in 2002/03) for the delivery of essential services to First Nations and Inuit governments and their community members, as well as the corresponding accountability and performance reporting and evaluation. Combined with the Canada / First Nation Funding Arrangement, this service can become a multi-jurisdictional, single-window Internet access to authorized users for on-line processing of business transactions, both financial and non-financial.

Key transactions that can be conducted through an on-line Transfer Payment service will include the application for and approval of funding, electronic scheduling and adjustment of cash requirements, transfer of funds, and filing of financial and non-financial reports to meet performance and accountability requirements. Financial reports will include audit statements that are consistent with National Accounts schedules, and non-financial reports will consist of administrative data and performance indicators for programs such as education, social development and support, capital and housing, Indian government support services, economic development, land and environment management, population statistics, etc.

The on-line transfer payment process will enhance the government-to-government transfer of resources to First Nations and Inuit governments, increase transparency and accountability to the community members and the Government of Canada, and reduce processing time and duplication through a single-window service.

On-line reporting and retrieval of financial and non-financial data will make the process more responsive to community needs. These reports, which include administrative data on programs such as social, education, capital and housing, band governance, etc., are collected at varying times and frequencies throughout the year.

Reporting results through a consolidated on-line process will improve the quality and consistency of the data. Equally important, experience with this core business on-line will contribute to building capacity in First Nation and Inuit communities to bridge the digital divide.

The client groups benefiting from this on-line service include First Nations and Inuit governments and organizations.

Information about the service can be accessed via the Aboriginal Peoples cluster under the Canadians gateway, or through the INAC Web site.

For more information about this service, please contact Holly Robinson at (819) 994-6673 or via e-mail at reference@ainc-inac.gc.ca.

Achievements

Major service components that INAC has already implemented on-line include:

- High-level mapping of "AS IS" and "TO BE" Transfer Payment Management Control Framework business functions were completed in March 2002.
- In March 2002, clients had access to on-line reporting of National Post-Secondary Education Program data.

- The Non-Registered On-Reserve Population (NRORP), designed to allow First Nation administrators to file annual statistics of on-reserve non-registered population on-line, was launched in April 1999.
- In June 1999, INAC implemented the Housing and Infrastructure Assets system (H&IA). H & IA is
 an on-line system for First Nation administrators to file annual reports on conditions of housing,
 water and sewer servicing on reserves.

Future Plans

INAC plans to enhance this on-line service through the implementation of the following major components:

- Electronic fund transfer between INAC and First Nations.
- Implement on-line Transfer Payments application, review and approval of funding arrangements.
- On-line reporting of program data for education and enhanced population statistics.
- On-line monitoring and tracking of funding process, including amendments, scheduling and adjustment of cash requirements.
- On-line reporting of program data for capital and housing, Indian government support services, environment and land management, and economic development.
- On-line capture of year-end financial statements that are consistent with National Account schedules and on-line monitoring of Remedial Management Plans.
- On-line reporting of program data for social development and support services.

The details, timing and resourcing are uncertain at this time since a source of funding has yet to be secured.

Indian Registry System/Certificate of Indian Status

The objective of the Indian Registry System/Certificate of Indian Status Project (IRS/CIS) is to improve access to services, including benefit entitlement for registered First Nations individuals.

The existing Indian Registry System will be modernized and business processes will be re-engineered to enable on-line access to, and update of, Indian Registry information.

INAC will also be developing and issuing a more secure identification card to minimize the misuse of the existing Certificate of Indian Status.

This service will provide improved access for First Nations people to services and benefits provided by other government departments, provincial / territorial governments, and Canadian businesses. Currently, some clients are denied access to services and benefits because their status identity cannot be easily determined and authenticated. Primary transactions include uninsured healthcare and provincial sales tax exemption.

The registration of life events and the update of identity information will also be improved through authorized secure on-line access to the Indian Registry System by other government departments and Indian Registration Administrators (IRAs) in First Nation membership offices.

When deployed, access to the on-line Indian Registry will be restricted to authorized users because of privacy and security requirements. Information on registration and CIS, however, can be accessed via the Aboriginal Peoples cluster under the Canadians gateway, or through the INAC Web site.

For more information about this service, please contact Ray Hatfield at (819) 994-0951 or via e-mail at reference@inac.gc.ca.

Achievements

The following work has been undertaken for this on-line service:

- The Department initiated a project to modernize the existing Indian Registry System and reengineer the associated business process to enable on-line access to, and update of, Registry information.
- The Department will also be developing and issuing a more secure identification card to minimize the misuse of the existing CIS. The enhanced identification card will improve access by First Nations individuals to programs and services that require identity authentication.
- As part of Stage 1, a pilot was conducted in partnership with the Treaty 7 First Nations in Alberta
 to evaluate the new on-line CIS issuance process available to IRAs in First Nation membership
 offices.

Future Plans

INAC plans to perform the following development work for this on-line service:

• Modernize the IRS and re-engineer the business process to enable on-line access to, and update of, Registry information by IRAs in First Nation membership offices.

- Develop and issue a more dignified and secure identification card to minimize the misuse of the existing CIS.
- National deployment of IRS in regional offices and First Nation membership offices.
- Phased national deployment of the enhanced CIS.

The details, timing and resourcing are uncertain at this time since a source of funding has yet to be secured.

Land Management

This service relates to the management of reserve lands in accordance with the Indian Act.

Three sub-components of this service are currently delivered on-line:

- Land transactions are recorded and maintained in the Indian Land Registry System (ILRS),
- Land leases and permits are tracked using the NetLands system, and
- Land information is displayed graphically as First Nation Community Maps using Geographic Information System (GIS).

The client groups benefiting from this on-line service include Aboriginal land administrators, solicitors, departmental staff, researchers, and claims negotiators.

The benefits to the client include faster and more cost effective service by eliminating the need of an individual to travel to a regional office or the Registry Office to obtain the necessary information.

The service can be accessed via the Aboriginal Peoples cluster under the Canadians gateway, or through the INAC Web site.

For more information about this service, please contact Jacques Desrochers at (819) 994-6743 or via e-mail at reference@inac.gc.ca.

Achievements

Work accomplished to date includes:

- The ILRS system, implemented in February 2001, was upgraded with additional enhancements in November 2002. ILRS provides authorized users with records of transactions of all on-reserve land parcels.
- NetLands, a restricted access, on-line system that tracks land transactions including leases and permits, was implemented in June 1999.

Future Plans

INAC plans to perform the following development work for the service:

 Enhancements to the First Nation community maps database, including digitization of additional maps and translation of subject field names.

Other improvements to this service could include the following, but the details, timing, and resourcing are uncertain at this time.

Enhance the NetLands system to track and report on Additions to Reserves.

• Enhance the Indian Land Registry System by adding a GIS component. For more effective service delivery, this enhancement will need to be developed jointly with the Legal Surveys Division of Natural Resources Canada.

Northern Environmental Management and Protection

Through this service INAC develops policies, strategies and programs for sustainable development, including the management of contaminated (hazardous waste) sites, the development and implementation of environmental assessment processes, according to federal requirements under the *Canadian Environmental Assessment Act* (CEAA) and legislation resulting from claims negotiations.

Additionally, this service administers the Northern Contaminants Program (NCP) which involves the planning of research, and the subsequent synthesis, publication and communication of research results. The negotiation of international agreements and controls on pollutants of concern in the North is also part of the NCP, as is the formation of multi-agency partnerships including Aboriginal organizations.

The client groups benefiting from this on-line service include researchers, contractors, project proponents, First Nations, Inuit and other Northerners, regulatory boards, academics, land use planners and the general public.

Client benefits from on-line delivery include improved project planning, access to northern research data and information on environmental, social and economic conditions.

The service can be accessed via the Aboriginal Peoples cluster under the Canadians gateway, or through the INAC Web site.

For more information about these services, please contact Sheilagh Murphy at (819) 997-0660 or via e-mail at reference@inac.gc.ca.

Achievements

Major service components already on-line include:

- Northern Contaminants Program (NAP) available on-line since January 1995. NAP provides
 documents that guide the strategic directions and funding of the Program, details on the
 management of the program, a list of funded projects and information, forms and supporting
 documents for preparation of proposals. More recently, an on-line registration system was used
 for a Northern Contaminants Program symposium held in 2003.
- Mines and Minerals information was added in June 2001.
- Oil and Gas information which includes maps, data on wells and information on rights issuance, was created in 1996.
- The Northern Information Network (NIN) went on-line in 1993. Map metadata and links to other northern sites were added to the service in January 1995.

Future Plans

INAC plans to perform the following development work for the service:

• Web enable the NCP database to share research data on contaminants in the North.

- Develop and implement an on-line system for managing submissions to the annual NCP Call for Proposals. The system will be linked to the NCP database to track the proposals and the funded projects.
- Re-design the NIN Web site to:
 - Improve access to data through addition of a searchable map.
 - Collaborate with other government departments to expand and enhance the content to make NIN a federal site serving the North.
 - Move to the new Canadian standard (a profile of the new international standard) for description of geomatics metadata.

The details, timing and resourcing are uncertain at this time since a source of funding has yet to be secured.

Northern Natural Resource Management

This service, which includes the following component services, provides for the management of land and natural resources, both on land and off shore, in the Northwest Territories and Nunavut:

- Issuing mineral titles; collecting royalties and fees, and monitoring and inspecting mining activities.
- Providing geoscience information on the geology and mineral deposits of the territories in the form of maps, studies, reports and databases.
- Providing oil and gas exploration activity, potential, and licencing information in the form of maps, reports, and databases.

The client groups benefiting from this on-line service include researchers, contractors, private companies in the oil and gas and mineral sectors, project proponents, First Nations, Inuit and other Northerners, regulatory boards, academics, land use planners and the general public.

Client benefits from on-line delivery include improved project planning, access to northern research data and information on environmental, social and economic conditions, improved access to historical data, reports, rights information, streamlined administrative processing for royalties and rights administration, and improved notification of program initiatives such as rights issuance.

The service can be accessed via the Aboriginal Peoples cluster under the Canadians gateway, or through the INAC Web site.

For more information about this service, please contact Sheilagh Murphy at (819) 997-0660 or via e-mail at reference@inac.gc.ca.

Achievements

The Oil and Gas Rights Query Tool, an interactive query tool for all oil and gas licences, was implemented in 2003.

Future Plans

INAC plans to perform the following development work for the service:

- Connect the Oil and Gas Rights Query Tool to a current transactional database.
- Complete an E-filing system to allow for the submission of on-line forms and financial reports including royalty submissions and reports, and calls for nominations and bids.
- Develop and implement an on-line oil and gas management system.
- Create an on-line system to manage and administer granular resources (i.e., quarries, construction material for roads) in the North.
- Implement e-financial transactions to enable payment of rents and royalties.

The details, timing and resourcing are uncertain at this time since a source of funding has yet to be secured.

Northern Science and Technology and Circumpolar Liaison

This service delivers the Northern Scientific Training Program (NSTP) and the Northern Science Award, and provides federal coordination with respect to Northern Science and Technology in Canada. The service also promotes cooperation among the eight Arctic nations through the implementation of the new Northern Dimension of Canada's foreign policy, including the engagement in Arctic Council and other international work.

The client groups benefiting from this on-line service include students and professors at Canadian universities, and the general public.

Benefits to clients include on-line registration for grants, and faster response times as a result of improvements made to the NSTP repository of applications, through which staff can more easily compare and track information.

The service can be accessed via the Aboriginal Peoples cluster under the Canadians gateway, or through the INAC Web site.

For more information about this service, please contact Sheilagh Murphy at (819) 997-0660 or via e-mail at reference@inac.gc.ca.

Achievements

Major service components already on-line include:

- Since September 2000, NSTP applicants are able to complete forms on-line and print them for submission through their nearest university.
- Grant application forms and all supporting documentation for NSTP have been on-line since April 1997.

Future Plans

INAC plans to implement the following major components to this on-line service:

- Northern Scientific Training Program interactive forms on the Internet.
- Complete end-to-end transaction with applicants for the NSTP.

The details, timing and resourcing are uncertain at this time since a source of funding has yet to be secured.

On-line Access to Corporate Information

This service will provide on-line access to discussion fora, INAC's corporate data warehouse, and various departmental information holdings such as program data (i.e., education, population, capital assets, housing, etc.) and the departmental library catalogue. Via this service, citizens can find complete and accurate departmental data, including information on First Nations, Inuit and Northern communities. Providing access to on-line discussion fora will allow for interactive collaboration and consultation between the Department and its First Nations, Inuit and Northern partners in policy development and other endeavours.

INAC's corporate data warehouse is an important source of information for First Nations communities, businesses, researchers, and the general public. This information is vital for various planning and policy development work at the community level (i.e., education, economic development, housing and infrastructure, etc.). It is also an effective tool for educating the public about issues and challenges facing Canada's First Nations and Aboriginal people.

The client groups benefiting from this on-line service include: Administrators, educators and staff in First Nations and Aboriginal communities; businesses and economic/community development planners; and researchers.

As the steward of the historical record of government decision-making, agreements, publications and data for Canada's Aboriginal people and Northerners, INAC must openly share this information with Aboriginal people and Northerners to build the partnership relationship and support Aboriginal goals.

On-line discussion for a will provide a structured environment through which partners and stakeholders can exchange ideas and share best practices. In much the same manner, these for a will also serve as an online meeting place in which consultations, surveys and collaboration among policy development partners can be carried out. Collectively, these on-line services will allow the Department to respond more effectively to the information needs of clients and partners alike.

Components of the service can be accessed via the Aboriginal Peoples cluster under the Canadians gateway, or through the INAC Web site.

For more information about this service, please contact Aaron Caplan at (819) 953-7062 or via e-mail at reference@inac.gc.ca.

Achievements

Major service components already on-line include:

- In 2003, the Department Web-enabled the departmental library catalogue management system, Virtua, creating an INAC Library Portal.
- In April 2001, the *First Nations Governance Talking Circles* was implemented to provide an on-line Discussion forum for sharing ideas and discussing issues related to First Nations Governance.
- In September 1999, the First Nations Community Profiles went on-line. This is a user-friendly, Web-based system which allows quick and easy on-line access to current profiles of First Nation communities.

Future Plans

INAC plans to implement the following major components to this on-line service:

- Additional on-line discussion / collaboration for aas determined by business needs.
- Re-design the First Nations Community Profiles system with links to more departmental databases and expand the amount of First Nations information available.

The details, timing and resourcing are uncertain at this time since a source of funding has yet to be secured.
