## **Canadian Data Report of Fisheries and Aquatic Sciences**

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1 - 25 in this series were issued as *Fisheries and Marine Service Data Records*. Numbers 26 - 160 were issued as *Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports*. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

## **Rapport statistique canadien des sciences halieutiques et aquatiques**

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

## ABSTRACT

Morris, J. F. T., Trudel, M., Thiess, M. E., Boyle, C. A., Zubkowski, T. B., and Maclean, H. R. 2008. CCGS *W.E. Ricker* Gulf of Alaska salmon survey, February 28 - March 23, 2007. Can. Data Rep. Fish. Aquat. Sci. 1206: 70 p.

The Highseas Salmon program of Fisheries and Oceans Canada conducted a survey of Pacific salmon in the Gulf of Alaska from February 28 - March 23, 2007 on the CCGS *W. E. Ricker*. The objectives of the survey were to (1) evaluate the distribution and ecology of juvenile Pacific salmon (*Oncorhynchus spp.*) during their first year in the ocean, (2) describe the ambient oceanographic conditions, and (3) quantify the biomass of zooplankton. Fish, oceanographic, and zooplankton sampling was conducted at stations ranging from the Strait of Juan de Fuca to Icy Strait in Southeast Alaska. A total of 674 were juvenile Pacific salmon in their first winter (age X.1) in the ocean were caught. Of these, 307 were juvenile coho and 486 were juvenile chinook under 400 mm in fork length. All the juvenile coho were caught on the west coast of Vancouver Island. Also, all the juvenile chinook from 100 to 199 mm, that were predominantly ocean ecotypes (age 0.1), were caught on the west coast of Vancouver Island. Juvenile chinook from 200 to 299 mm, that were predominantly stream ecotypes (age 1.1), were caught primarily both on the west coast of Vancouver Island and in Sumner Strait in Southeast Alaska. Ten of the fourteen juvenile coho that were recovered with CWT's on the west coast of Vancouver Island, were from the Puget Sound and Hood Canal region in Washington State. Also, eleven of the twelve ocean ecotype juvenile chinook that were recovered with CWT's on the west coast of Vancouver Island, were from the Hood Canal and Puget Sound region. No Columbia-Snake River CWT's were recovered.

## RÉSUMÉ

Morris, J. F. T., Trudel, M., Thiess, M. E., Boyle, C. A., Zubkowski, T. B., and Maclean, H. R. 2008. Campagne d'évaluation des saumons dans le Golfe de l'Alaska à bord du CCGS *W. E. Ricker* du 28 Février au 23 Mars 2007. Can. Data Rep. Fish. Aquat. Sci. 1206: 70 p.

Le programme canadien des Saumons en Haute Mer de Pêches de Océans Canada a réalisé une étude sur les saumons du Pacifique dans le Golfe de l'Alaska du 28 Février au 23 Mars 2007. Les objectifs de cette étude était de (1) évaluer la distribution et l'écologie des saumons du Pacifique (*Oncorhynchus* spp.) juvéniles durant leur première année en mer, (2) décrire les conditions océanographiques ambiantes, et (3) quantifier la biomasse de zooplancton. Nous avons mesuré les conditions océanographiques et échantillonné le zooplancton et les poissons à des stations situées entre le détroit de Juan de Fuca et le détroit de Icy dans le sud-est de l'Alaska. En tout, 674 saumons juvéniles du Pacifique (âge X.1) ont été capturés durant leur premier hiver en mer, incluant : 307 saumons coho (*O. kisutch*) juvéniles et 486 saumons quinnats (*O. tshawytscha*) juvéniles ayant une longueur à la fourche inférieure à 400 mm. Tous les saumons coho juvéniles ont été capturés sur la côte ouest de l'Île de Vancouver. Les saumons quinnats juvéniles ayant une longueur à la fourche entre 100 et 199 mm et qui sont probablement de type océanique (âge 0.1), ont aussi tous été capturés aussi la côte ouest de l'Île de Vancouver. Les saumons quinnats juvéniles ayant une longueur à la fourche entre 200 et 299 mm et qui sont probablement de type riverain (âge 1.1), ont été capturés principalement sur la côte ouest de l'Île de Vancouver, ainsi que dans le détroit de Sumner dans le sud-est de l'Alaska. Dix des quatorze saumons coho juvéniles ainsi que onze des douze saumons quinnats juvéniles de type océanique marqués à l'aide de CWT provenaient du détroit de Puget et de la région du Canal Hood dans l'état du Washington. Aucun des saumons juvéniles marqués à l'aide de CWT ne provenaient de la rivière Columbia.

## INTRODUCTION

The Highseas Program of Fisheries and Oceans Canada has conducted annual Pacific salmon surveys on the continental shelf in the Gulf of Alaska since 1995<sup>(1-31)</sup>. The objectives of these surveys were to collect information on (1) the distribution and ecology of Pacific salmon (*Oncorhynchus spp.*), (2) the associated physical oceanography, and (3) the distribution and biomass of zooplankton.

This report documents the scientific data collected on the CCGS *W.E. Ricker* survey to the Gulf of Alaska from February 28 - March 23, 2007. Operations were conducted from the west coast of Vancouver Island to Icy Strait in Southeast Alaska.

## MATERIALS AND METHODS

### General Survey Information

Figures 1, 2, and 3 show the fishing, oceanographic and zooplankton stations, respectively, completed by the CCGS *W.E. Ricker* on the February 28 - March 23, 2007 survey. A total of 120 fishing stations, 120 oceanographic stations, and 119 zooplankton stations were completed.

The survey conducted scientific operations in the Strait of Juan de Fuca, on the shelf off the west coast of Vancouver Island, in the inlets on the west coast of Vancouver Island, in Hecate Strait, in Burke Channel and Portland Inlet on the central coast of British Columbia, in Dixon Entrance, and inside Southeast Alaska up to Icy Strait. Two of the Highseas Salmon program's standard cross-shelf transects were completed: the Estevan Point transect off Vancouver Island and the Hecate Strait transect. In addition, a cross-shelf transect was completed off Ucluelet towards Laperouse Bank on the west coast of Vancouver Island.

### Fishing Gear and Fishing Operations

The survey was conducted on the CCGS *W.E. Ricker*, a stern trawler 58 m in length which is powered by a 2,500 H.P. model AH 40 Akasaka diesel engine. The ship towed a mid-water trawl, originally manufactured by Cantrawl Nets Ltd., Richmond, BC, and later modified to a model 240 trawl by the fishing crew. The trawl has a heavy-duty front end of hexagonal web made from 3/8 in. (9.5 mm) and 5/16 in. (7.9 mm) Tenex rope, and a tapered body made-up of 64 in. (163 cm), 32 in. (81.3 cm), 16 in. (40.6 cm), 8 in. (20.3 cm) and 4 in. (10.2 cm) polypropylene sections, an intermediate section of 3 in. (7.6 cm) polypropylene, and a codend of 1.5 in. (3.8 cm) knotted nylon lined with 0.25 in. mesh (64 mm). The trawl has three 40 m bridles of 5/8 in. (1.6 cm) wire rope per side that are attached with a single hook-up to 5 m Jet doors. Typically, 100-150 m of 1.25 in. (3.2 cm) warp was paid out to tow the trawl at the surface. The CCGS *W.E. Ricker* was able to tow the trawl at the surface at 5 knots (2.6 m s<sup>-1</sup>) in good sea

conditions, and this typically achieved a mouth opening that was approximately 28 m wide by 16 m deep as measured acoustically by a Scanmar trawl eye mounted on the headrope. In rough weather, the trawl was towed at headrope depths down to 15 m.

### Oceanographic Sampling

At oceanographic stations, the scientific crew (1) conducted CTD (conductivity-temperature-depth) casts, (2) collected seawater samples at 10 m from the surface with a Niskin bottle for nitrate, phosphate, silicate, and salinity, and (3) filtered surface seawater on GF/F glass fibre filter disks for chlorophyll a. Nitrate, phosphate, and silicate samples were collected in acid-washed glass test tubes, and the glass fiber disks were folded and placed in polypropylene scintillation vials. All these samples were stored frozen. CTD casts were conducted to 250 m or within 5 m of the bottom with a Seabird SBE 911+ probe. Several calibration samples from selected CTD casts were collected over the course of the survey with Niskin bottles at depths where the salinities were stable.

### Zooplankton Sampling

Vertical bongo tows to approximately 150 m or within 10 m of the bottom were conducted with two 57 cm diameter, 253 µm Nitex nets. One of the nets was equipped with a flowmeter. Zooplankton collected from the flowmeter side were preserved in 10% formalin and sent to the zooplankton laboratory at the Institute of Ocean Sciences, Fisheries and Oceans Canada (Sidney, BC) for species classification and enumeration. Zooplankton taken from the net without flowmeter were sorted into four size fractions by successively sieving through 8.0, 1.7, 1.0, and 0.25 mm screens. Each size fraction was weighed wet, dried at 60°C for 48 hours, re-weighed, and stored in plastic bags for future stable isotope, bomb calorimetry, and proximate analyses.

## RESULTS

### Salmon Catch Data

Tables 1 and 2 report information on trawl tows and a summary of Pacific salmon catches for this survey. Tow information includes: station ID, transect name, sampling region, date and time, start latitude ( $^{\circ}$ N) and longitude ( $^{\circ}$ W), heading ( $^{\circ}$ T; degrees true), and bottom depth (m). Station ID numbers include the Pacific Biological Station cruise designation "HS200709", where HS represents the Highseas Salmon program, and a tow number such as "JF01", that represents tow #1 in the Strait of Juan de Fuca. The station ID number, that in this example is "HS200709-JF01", serves as the primary key in the High Seas salmon database that links fishing tow information with the oceanographic and zooplankton tables.

In Table 1, catch totals for each tow are provided for all chinook salmon (*O. tshawytscha*) ("CK"), and separately for juveniles and adults of chum salmon (*O. keta*) ("CM"), coho salmon (*O. kisutch*) ("CO"), pink salmon (*O. gorbuscha*) ("PK"), and

sockeye salmon (*O. nerka*) ("SE"). In this report, juveniles are defined as salmon in their first winter in the ocean (age X.1). Adults include all older age groups (age X.2+ or older). Chum, coho, pink, and sockeye salmon were separated into juveniles and adults based on the non-overlapping, bimodal distributions of fork lengths on previous Highseas Salmon winter surveys<sup>(14,16,17,24,27,28)</sup>. Juvenile chinook were defined as chinook that were less than 400 mm in fork length based on the examination of fork lengths from age 0.1 and age 1.1 CWT recoveries on the same previous Highseas Salmon winter surveys.

Table 2 provides catch totals per tow for the following size classes of chinook based on fork length measurements: juvenile chinook less than 100 mm, juvenile chinook from 100 to 199 mm, juvenile chinook from 200 to 299 mm, juvenile chinook from 300 to 349 mm, juvenile chinook from 350 to 399 mm, chinook from 400 to 499 mm, and chinook equal to or greater than 500 mm.

The abbreviations for the regions in the tables are:

ISEA	inside straits of Southeast Alaska
DE	Dixon Entrance
HS	Hecate Strait
IBC	inside channels on the north and central coasts of BC
VI	west coast Vancouver Island
IVI	inlets on the west coast of Vancouver Island
JF	Strait of Juan de Fuca

## Biological Data

Table 3 reports the detailed biological data collected from each Pacific salmon caught during the survey. Individual salmon were assigned a fish number which consisted of the cruise identifier "HS200709", followed hierarchically by tow number, species code, and sample number. For example, "HS200709-DE04-124-001" refers to tow number DE04 for tow #4 in Dixon Entrance, species code "124" for chinook salmon, and the sample number "001" that is a consecutive number within a combined tow and species set. We used the following species codes that were borrowed from the Pacific Biological Station's Salmon Stock Assessment database: 108, pink salmon; 112, chum salmon; 115, coho salmon; 118, sockeye salmon; and 124, chinook salmon. Biological data presented for each salmon includes species common name, fork length, and observed fin clip. It also includes, where available, whole body weight (g wet), sex, stomach content weight (g wet), % water that is based on the ratio of dry to wet whole body weight, coded wire tag number, and pit tag number.

## Juvenile Salmon Catch Distributions

A total of 819 Pacific salmon were caught on the survey. Of these, 806 were juvenile salmon most of which would be in their first winter (age X.1) in the ocean. Of these juveniles, 2 were juvenile chum, 11 were juvenile sockeye, 307 were juvenile

coho, and 486 were juvenile chinook under 400 mm in fork length. No juvenile pinks were caught.

All the juvenile coho on the survey were caught on the west coast of Vancouver Island (Figure 7). Most were caught in the Strait of Juan de Fuca and on Swiftsure Bank, where they averaged 50.3 fish per tow. An additional 5 in total were caught on Finger Bank off Cape Beale, in Imperial Channel, and in Quatsino Sound on the west coast of Vancouver Island.

All the juvenile chinook from 100 to 199 mm in fork length, that were mostly age 0.1 ocean ecotypes, were also caught on the west coast of Vancouver Island. (Figure 8). Most were caught in the Quatsino area, where they averaged 7.8 fish per tow, compared to just 0.3 fish per tow elsewhere.

Juvenile chinook from 200-299 mm in fork length were caught primarily on the west coast of Vancouver Island and in Sumner Strait in Southeast Alaska (Figure 9), where they averaged 6.6 fish per tow and 5.0 fish per tow, respectively. They were particularly abundant in the Quatsino area on Vancouver Island, where they averaged 15.4 fish per tow.

Juvenile chinook from 300-399 mm in fork length were caught primarily off the west coast of Vancouver Island and inside Southeast Alaska up to Icy Strait at the low rates of 0.4 and 0.3 fish per tow (Figure 10).

### **Size Comparisons of Juvenile Salmon Among Regions**

Figure 16 shows the fork length frequencies for chinook and coho salmon caught on the survey. Figure 17 shows the size distributions by region for juvenile chinook salmon that were less than 400 mm in fork length. A rigorous regional comparison of sizes of juvenile chinook for specific ocean age classes was not attempted due to the overlap for size modes that represent 0.1 and 1.1 age classes. However, based on size comparisons with CWT chinook recoveries from previous Highseas Salmon winter surveys<sup>(14,16,17,24,27,28)</sup>, the juvenile chinook that were caught on the inside straits of Southeast Alaska and that averaged 271 mm, should be predominantly age 1.1, stream ecotypes; whereas juvenile chinook that were caught within the inlets on the west coast of Vancouver Island and that averaged 211 mm, should be predominantly age 0.1 ocean ecotypes. The juvenile chinook caught in the Strait of Juan de Fuca and on the shelf off the west coast of Vancouver Island that averaged 268 and 251 mm, respectively, should be a relatively more balanced mixture of ocean and stream ecotypes. Figure 18 shows the size distribution off the west coast of Vancouver Island for age 1.1 juvenile coho salmon. They averaged 342 mm in fork length with a standard error of 2.065 mm.

## CWT recoveries

Table 6 shows the information collected from the CWT recoveries collected on the survey. Twelve age 0.1 juvenile chinook with CWT's were caught on the west coast of Vancouver Island. All had been released from Washington State hatcheries. None were Columbia-Snake River releases. Two age 1.1 juvenile chinook with CWT's were caught in Southeast Alaska: one in Icy Strait that had been released by the Douglas Island Pink and Chum facility in Juneau; and a second in Sumner Strait that had been released from the Whitman Lake hatchery near Ketchikan. Fourteen age 1.1 juvenile coho with CWT's were caught on the west coast of Vancouver Island. Of these, thirteen had been released in Washington State, and one was from the Inch Creek hatchery in the region of the lower Fraser in British Columbia.

## Oceanographic Data

Table 4 reports the physical oceanographic data collected during the survey, including the station ID number, transect, region, the date and time in UTC, the latitude ( $^{\circ}$ N) and longitude ( $^{\circ}$ W), sea surface temperature (SST;  $^{\circ}$ C), and salinity (SSS; ppt) taken from the CTD files, sea surface salinities (ppt) determined from the sample bottles that were used to calibrate the CTD probe, nitrate, silicate and phosphate concentrations ( $\mu\text{mol L}^{-1}$ ), and chlorophyll a ( $\mu\text{g L}^{-1}$ ).

The contact procedure to obtain the CTD files is available at:

[http://www-sci.pac.dfo-mpo.gc.ca/osap/data/default\\_e.htm](http://www-sci.pac.dfo-mpo.gc.ca/osap/data/default_e.htm)

## Zooplankton Data

Table 5 reports the zooplankton data by station collected by the bongo tows, including the station ID number, transect, region, latitude ( $^{\circ}$ N) and longitude ( $^{\circ}$ W), bottom depth (m), the date and time, target depth (m), tow duration, wire angle (degrees), and volume of ocean water sampled in cubic meters that is calculated from the flow meter readings. Also shown are the dry weights (g) of zooplankton which were standardised to 1,000 cubic meters sampled for the 8.0, 1.7, 1.0, and 0.25 mm size fractions as well as for the total sample.

The contact procedure to obtain detail species records from selected plankton sampling stations is available at:

[http://www.pac.dfo-mpo.gc.ca/sci/osap/projects/plankton/zooplanktondatabase\\_e.htm](http://www.pac.dfo-mpo.gc.ca/sci/osap/projects/plankton/zooplanktondatabase_e.htm)

Table 6 - Page 2 of 2

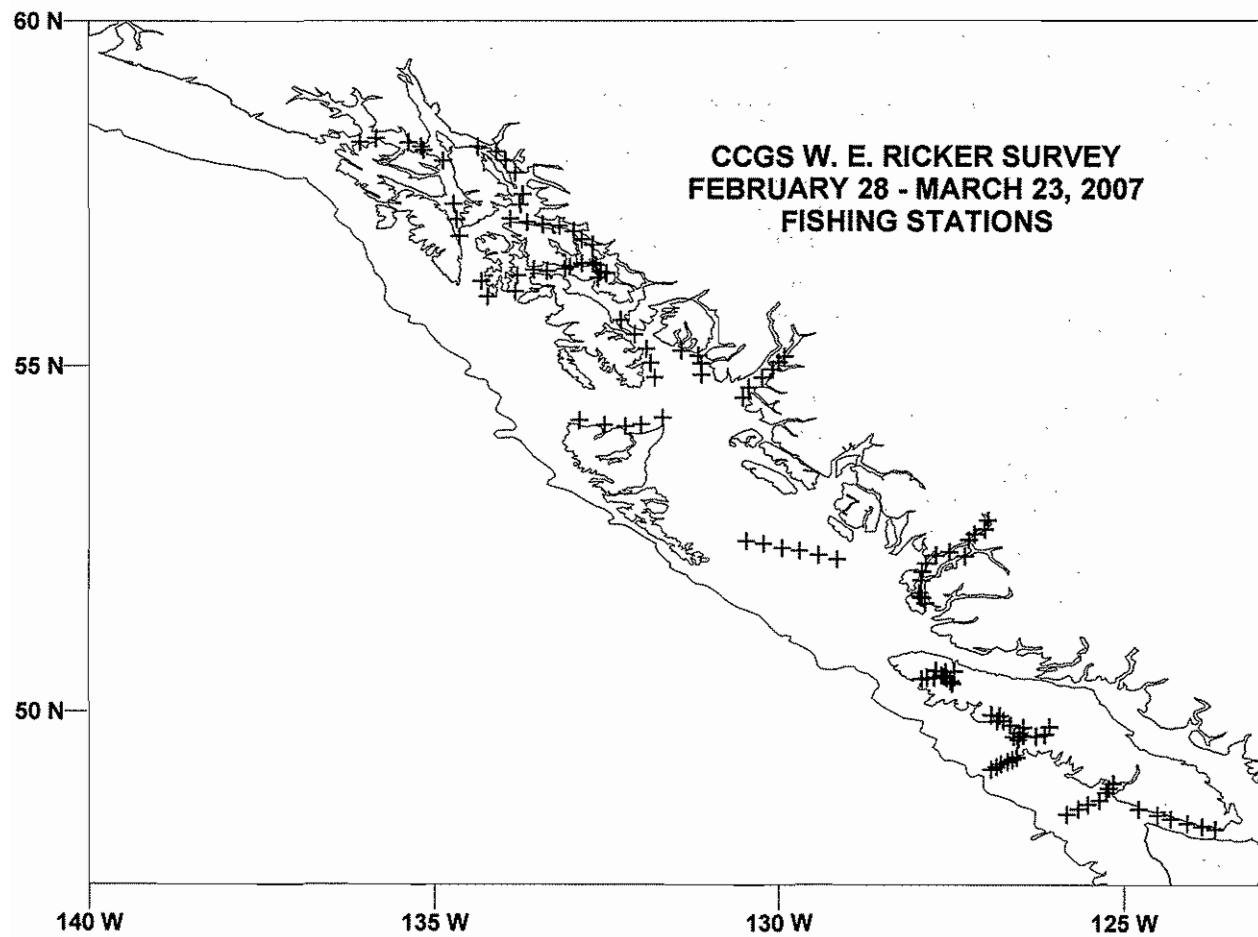

Figure 1. Fishing stations on the CCGS *W.E. Ricker* survey to the Gulf of Alaska,  
28/02/2007- 23/03/2007.

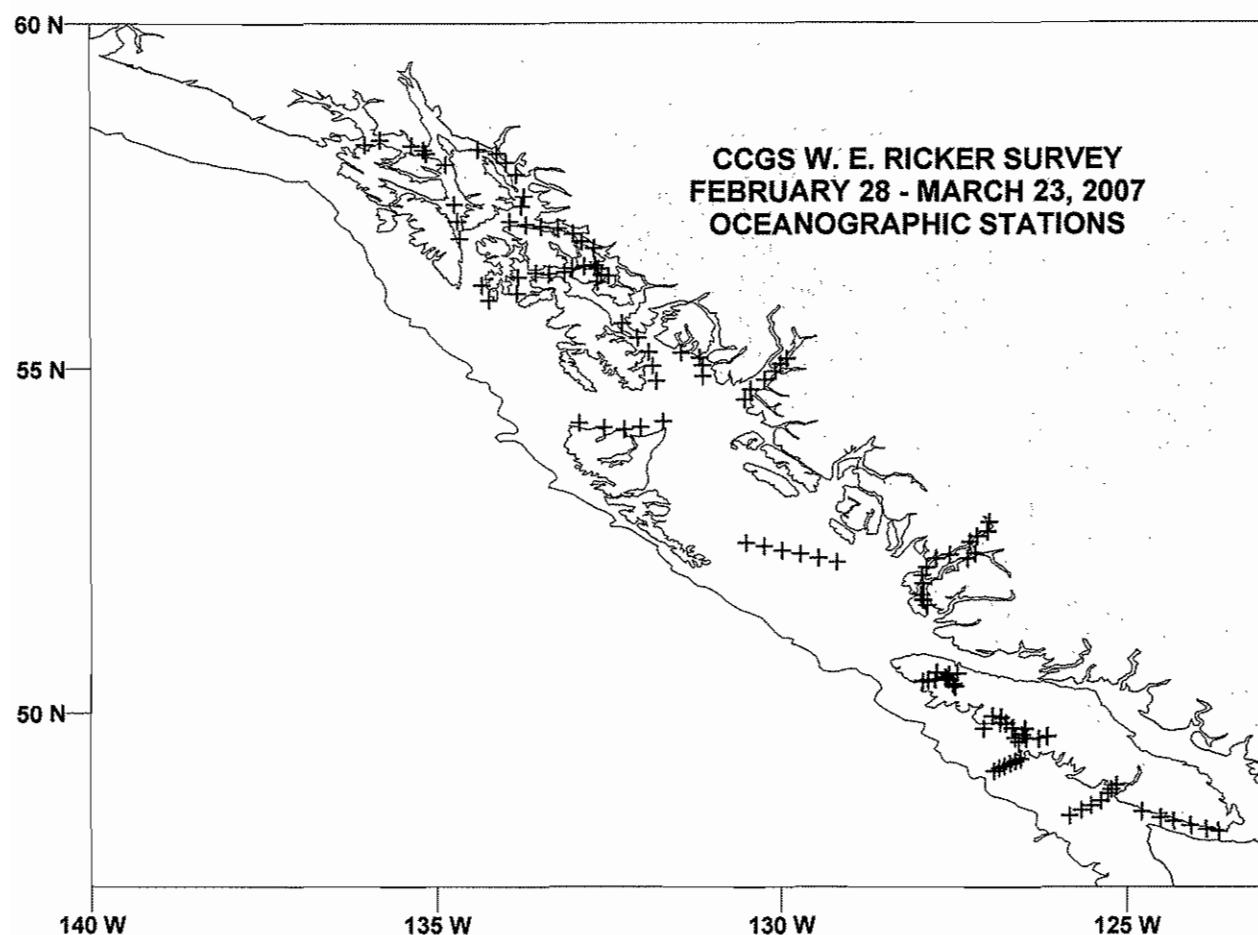

Figure 2. Oceanographic stations on the CCGS W.E. Ricker survey to the Gulf of Alaska, 28/02/2007 – 23/03/2007.

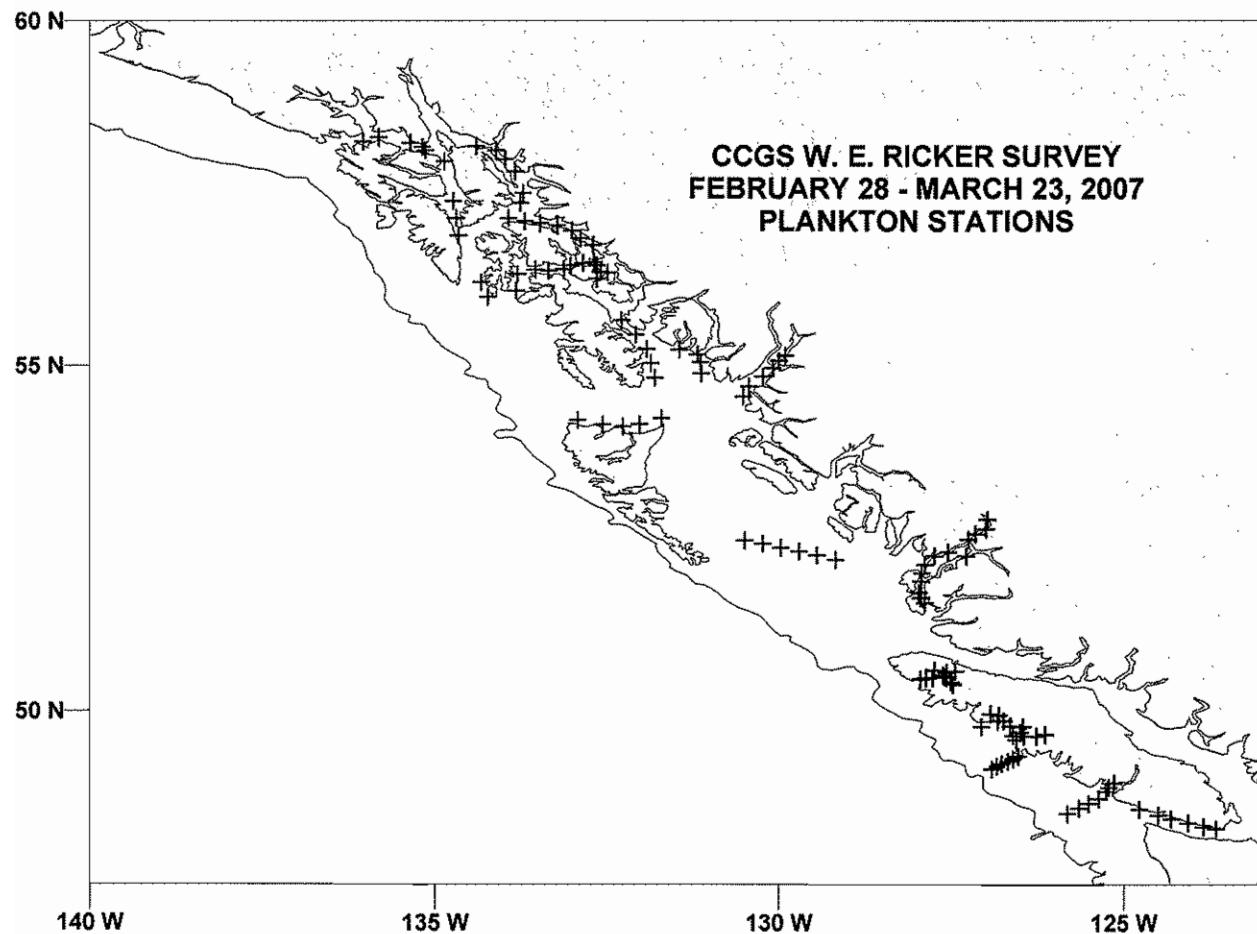

Figure 3. Plankton stations on the CCGS W.E. Ricker survey to the Gulf of Alaska, 28/02/2007 - 23/03/2007.

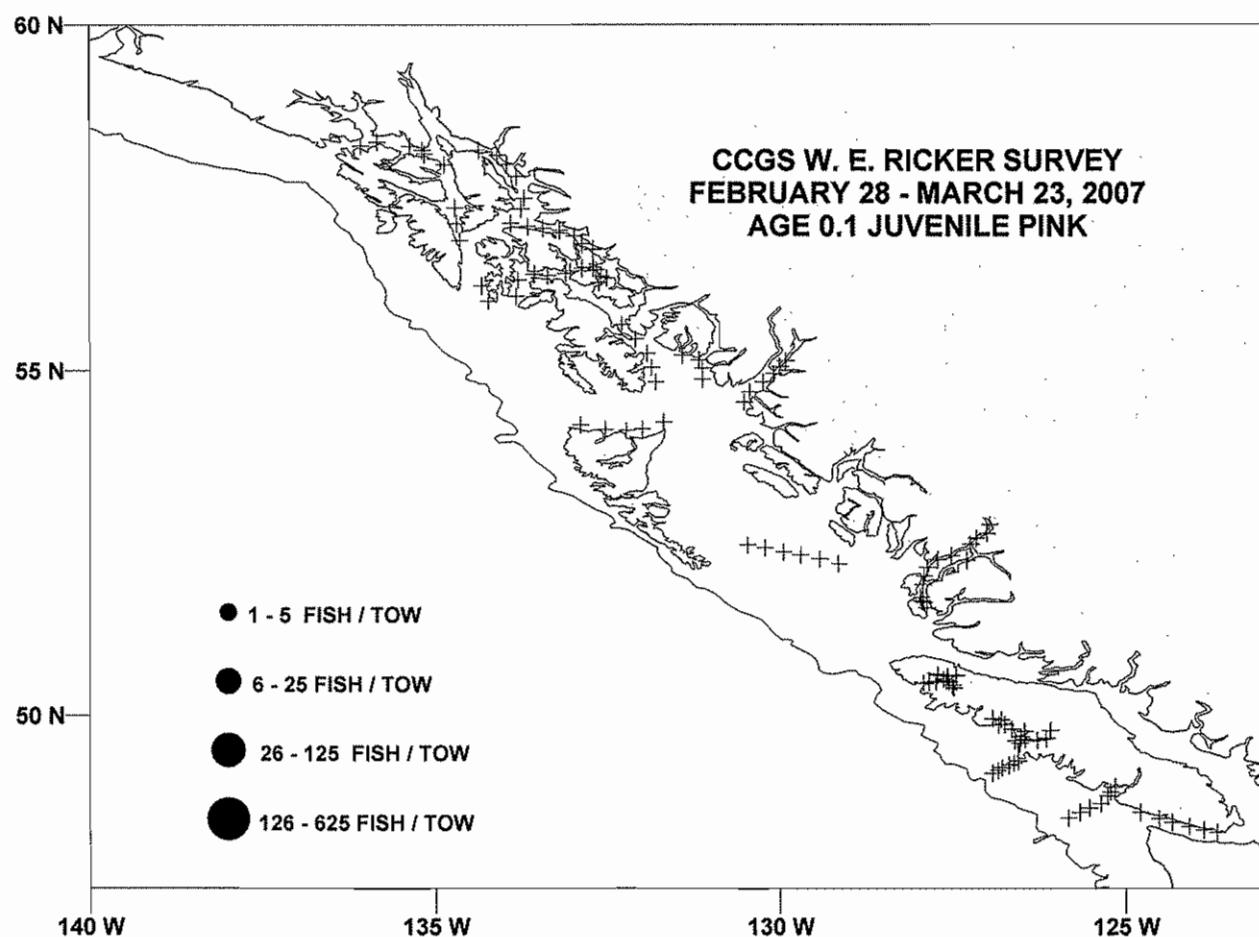

Figure 4. Distribution of age 0.1 juvenile pink salmon catches on the CCGS *W.E. Ricker* survey to the Gulf of Alaska, 28/02/2007 - 23/03/2007. Symbol size (●) is proportional to catch per tow; zero catches are shown by a (+).

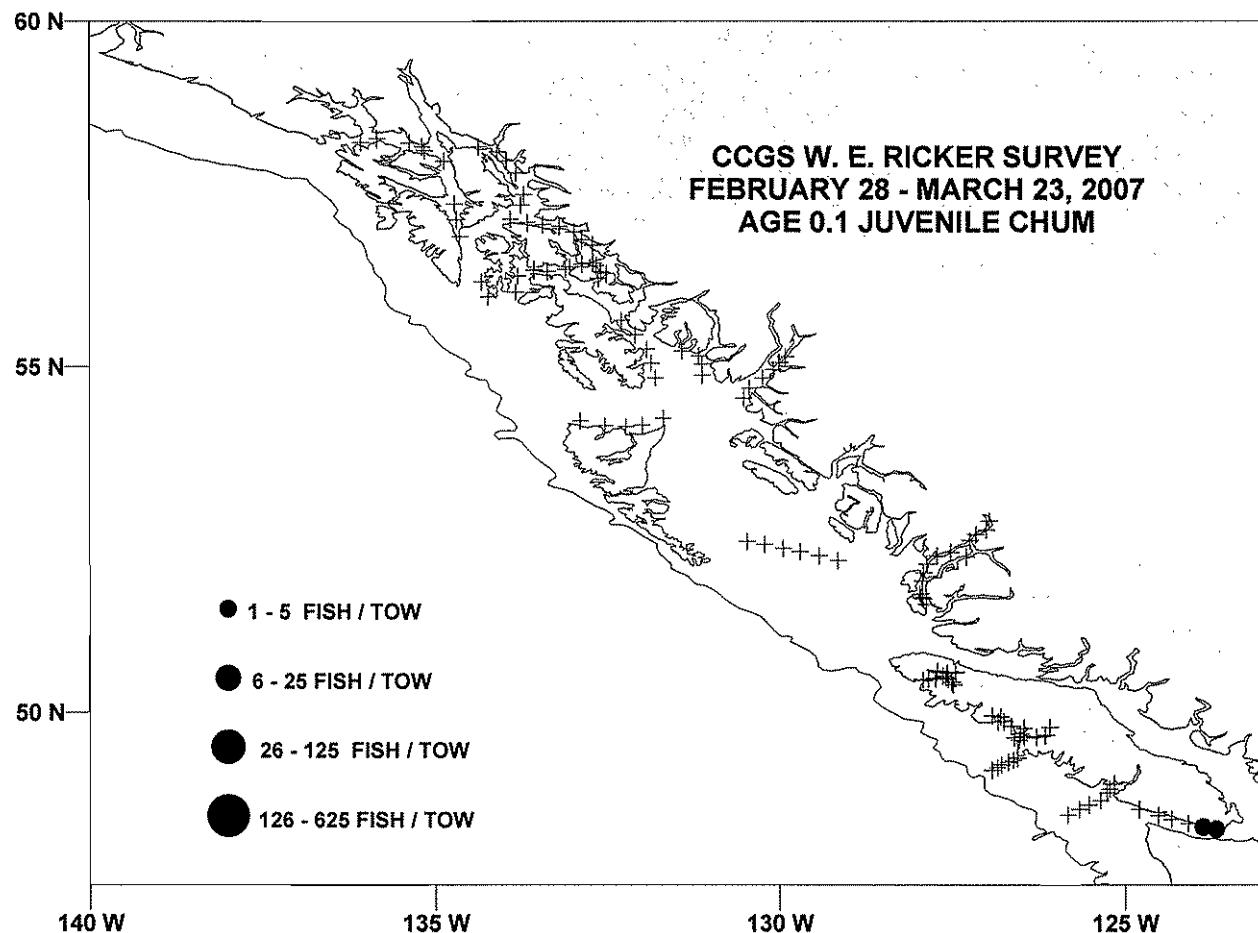

Figure 5. Distribution of age 0.1 juvenile chum salmon catches on the CCGS W.E. Ricker survey to the Gulf of Alaska, 28/02/2007 - 23/03/2007. Symbol size (●) is proportional to catch per tow; zero catches are shown by a (+)

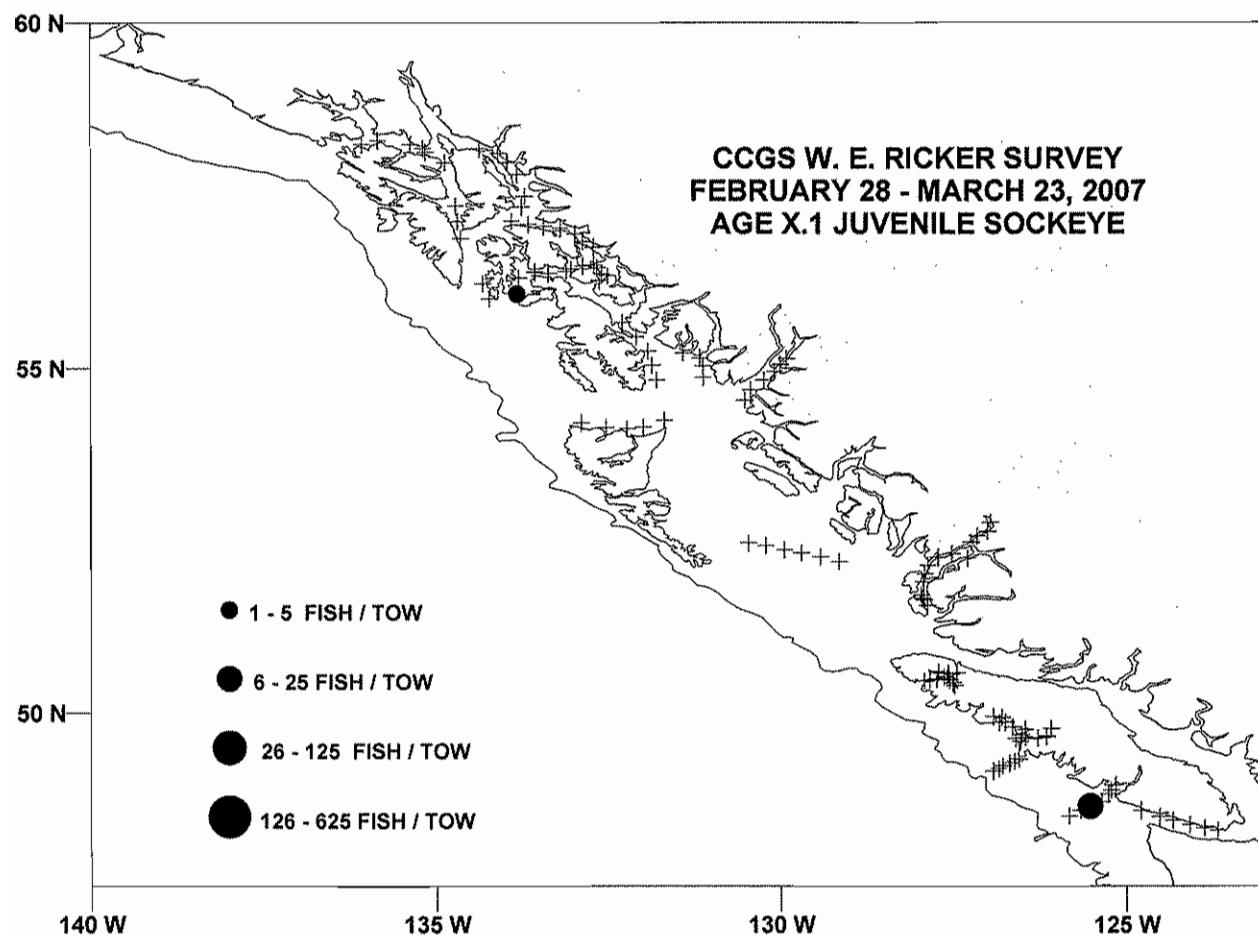

Figure 6. Distribution of age X.1 juvenile sockeye salmon catches on the CCGS W.E. Ricker survey to the Gulf of Alaska, 28/02/2007 - 23/03/2007. Symbol size (●) is proportional to catch per tow; zero catches are shown by a (+).

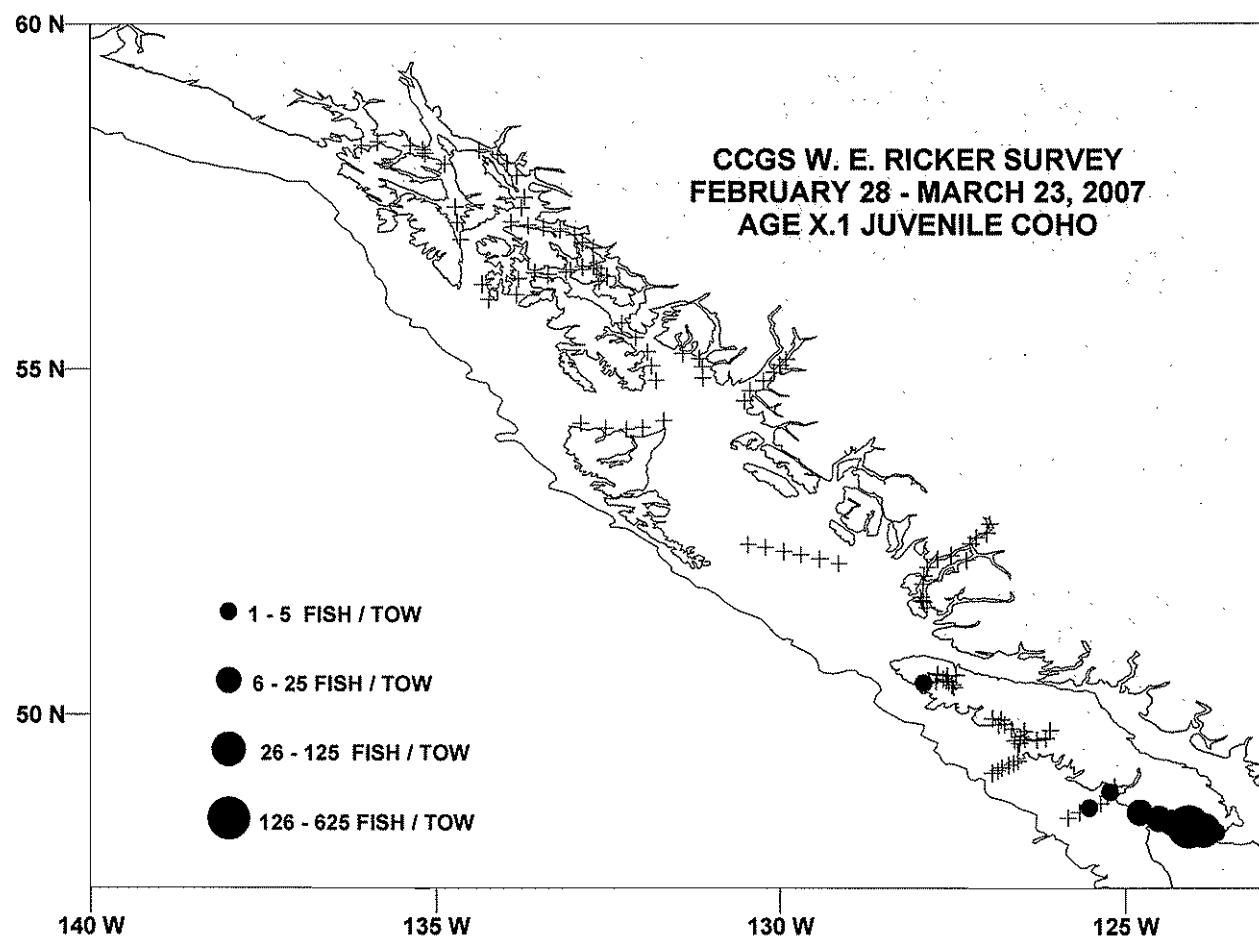

Figure 7. Distribution of age X.1 juvenile coho salmon catches on the CCGS *W.E. Ricker* survey to the Gulf of Alaska, 28/02/2007 - 23/03/2007. Symbol size (●) is proportional to catch per tow; zero catches are shown by a (+).

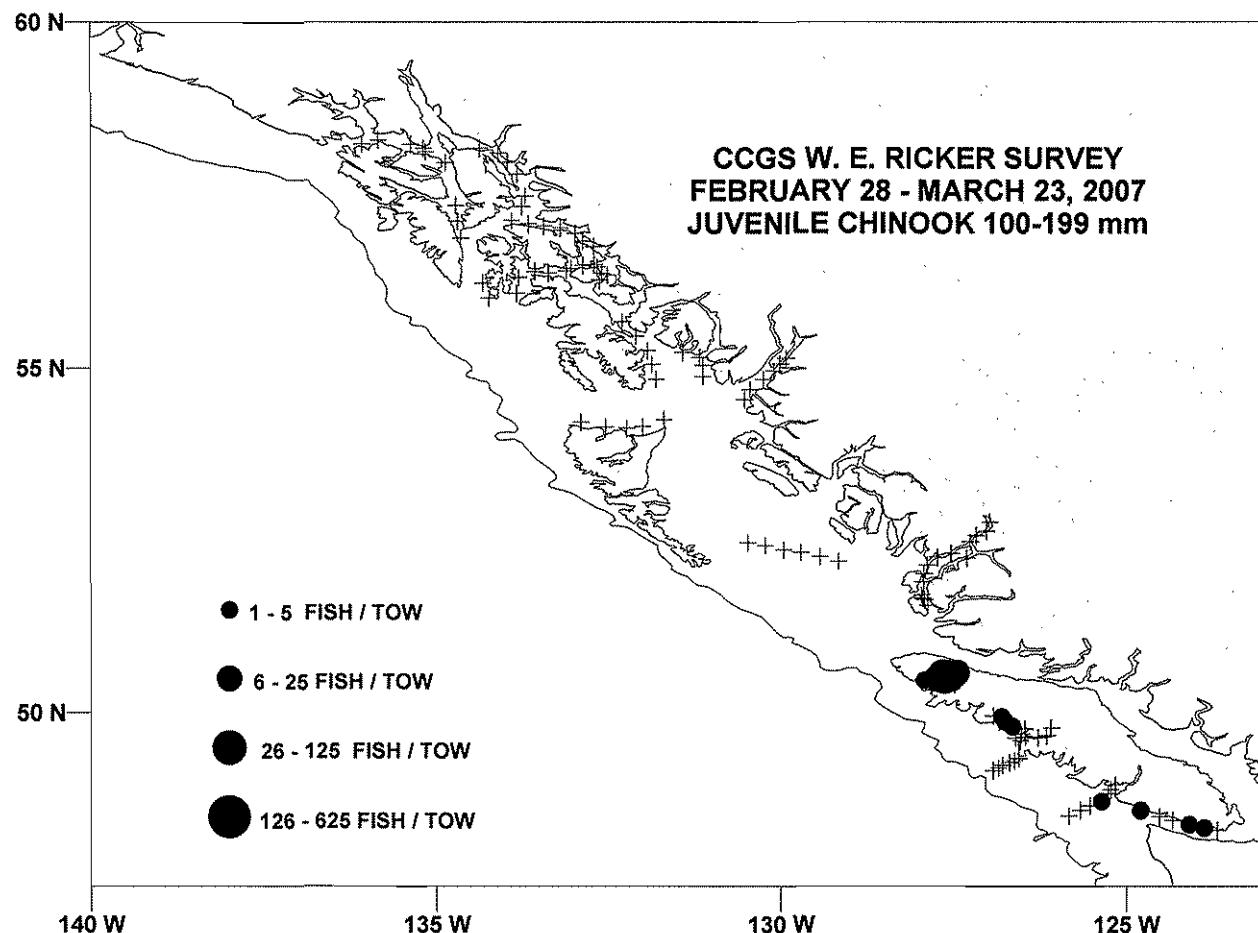

Figure 8. Distribution of catches of juvenile chinook salmon from 100 to 199 mm on the CCGS W.E. Ricker survey to the Gulf of Alaska, 28/02/2007 - 23/03/2007. Symbol size (●) is proportional to catch per tow; zero catches are shown by a (+).

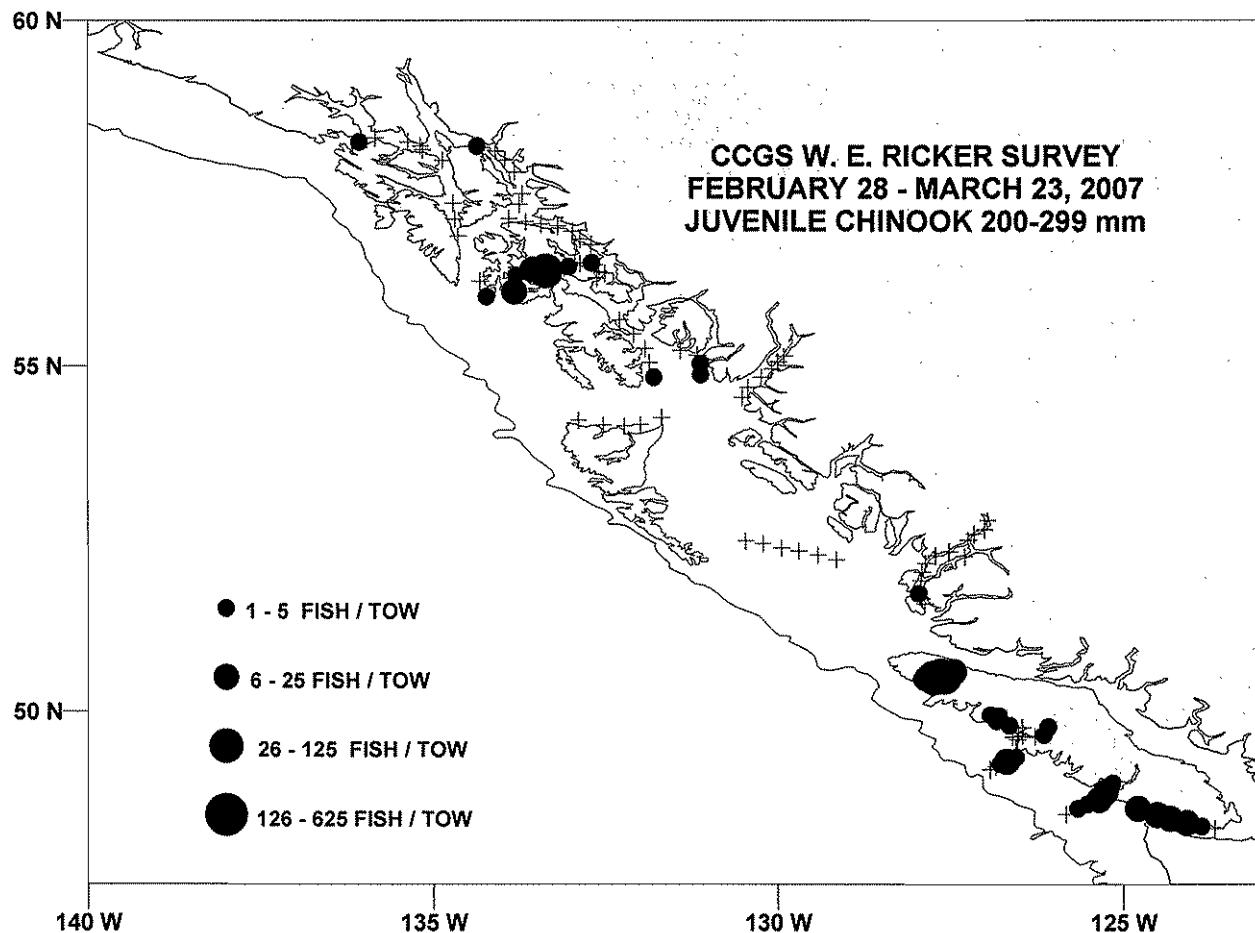

Figure 9. Distribution of catches of juvenile chinook salmon from 200 to 299 mm on the CCGS *W.E. Ricker* survey to the Gulf of Alaska, 28/02/2007 - 23/03/2007. Symbol size (●) is proportional to catch per tow; zero catches are shown by a (+).

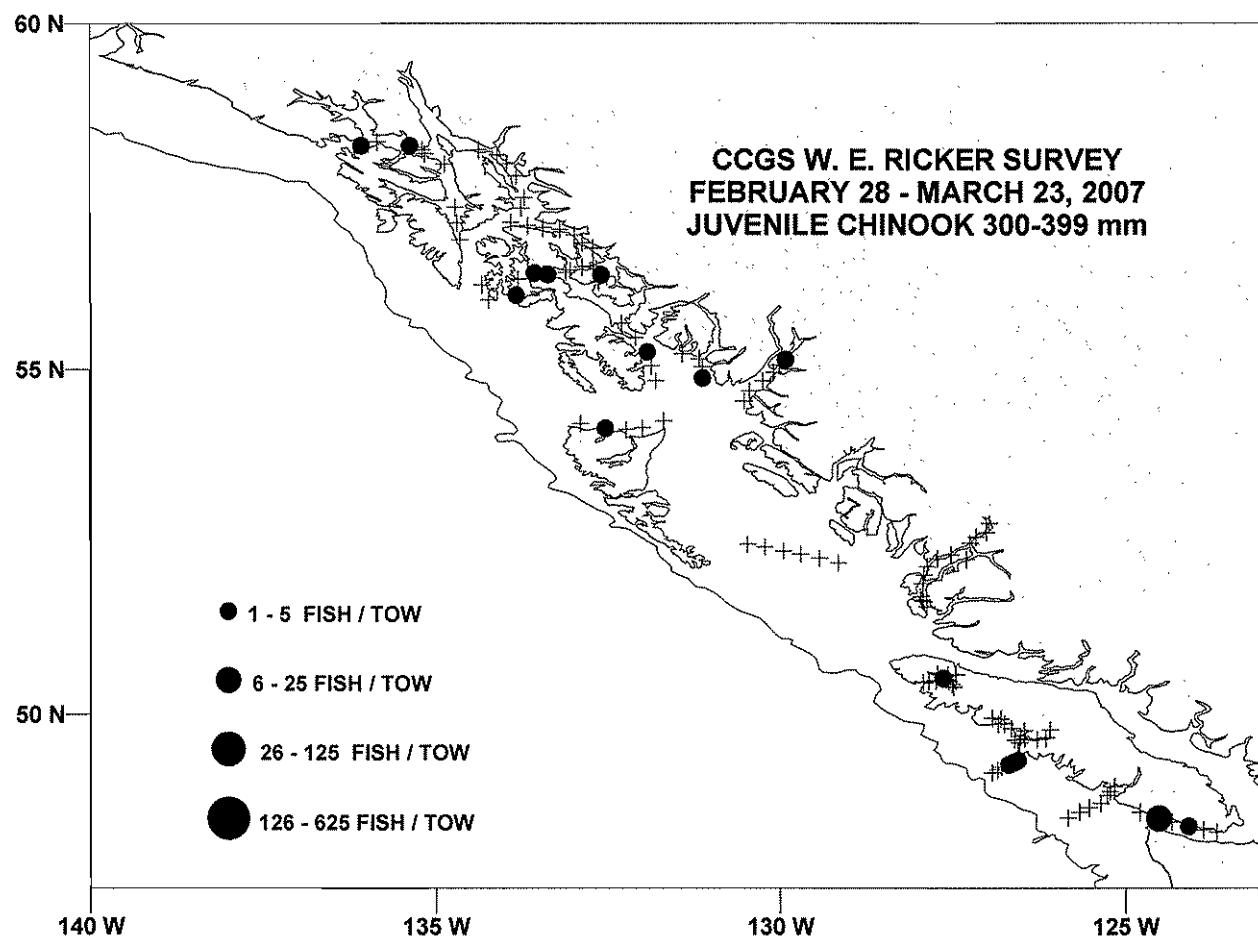

Figure 10. Distribution of catches of juvenile chinook salmon from 300 to 399 mm on the CCGS W.E. Ricker survey to the Gulf of Alaska, 28/02/2007 - 23/03/2007. Symbol size (●) is proportional to catch per tow; zero catches are shown by a (+).

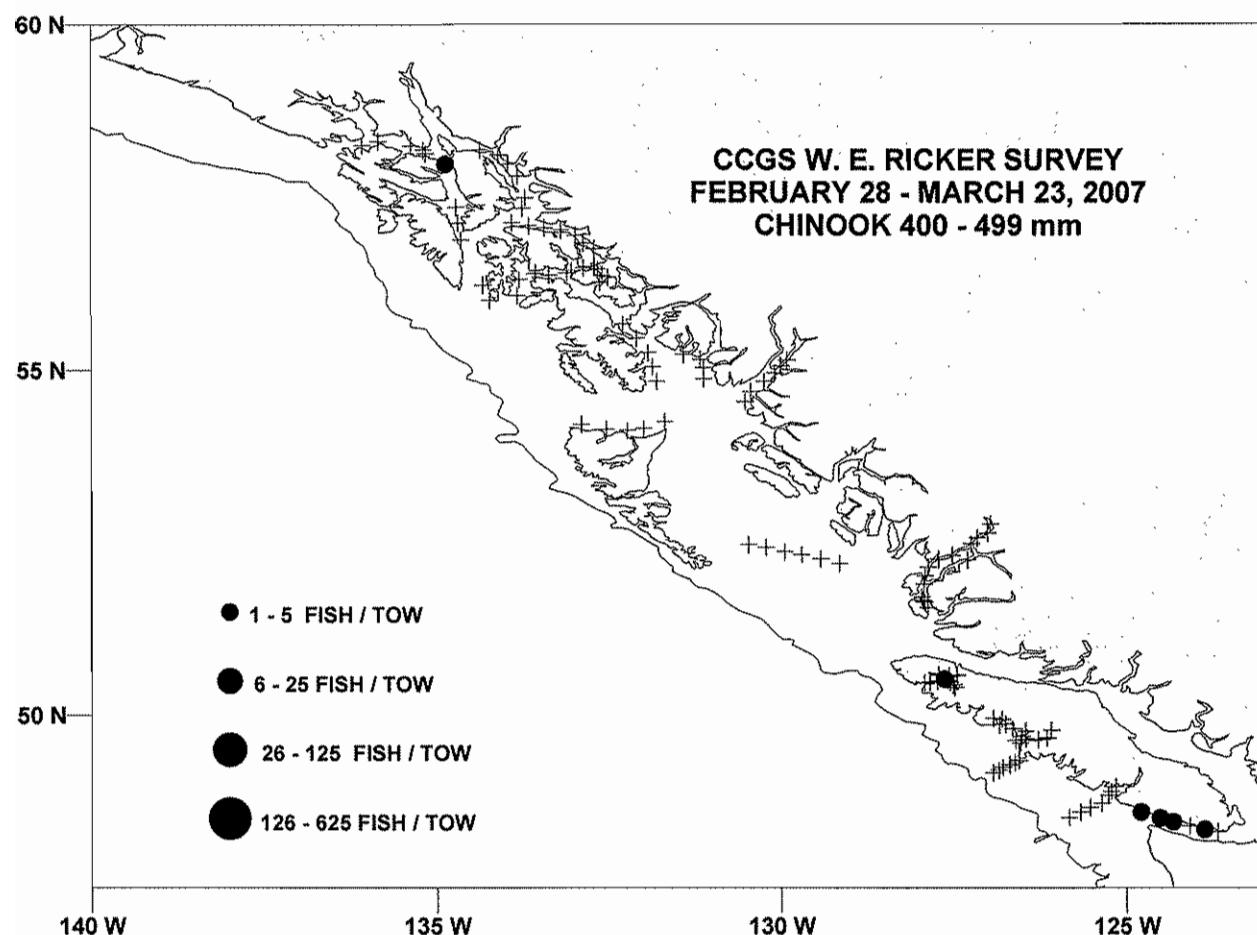

Figure 11. Distribution of catches of chinook salmon from 400 to 499 mm on the CCGS *W.E. Ricker* survey to the Gulf of Alaska, 28/02/2007 - 23/03/2007.  
Symbol size (●) is proportional to catch per tow; zero catches are shown by a (+).

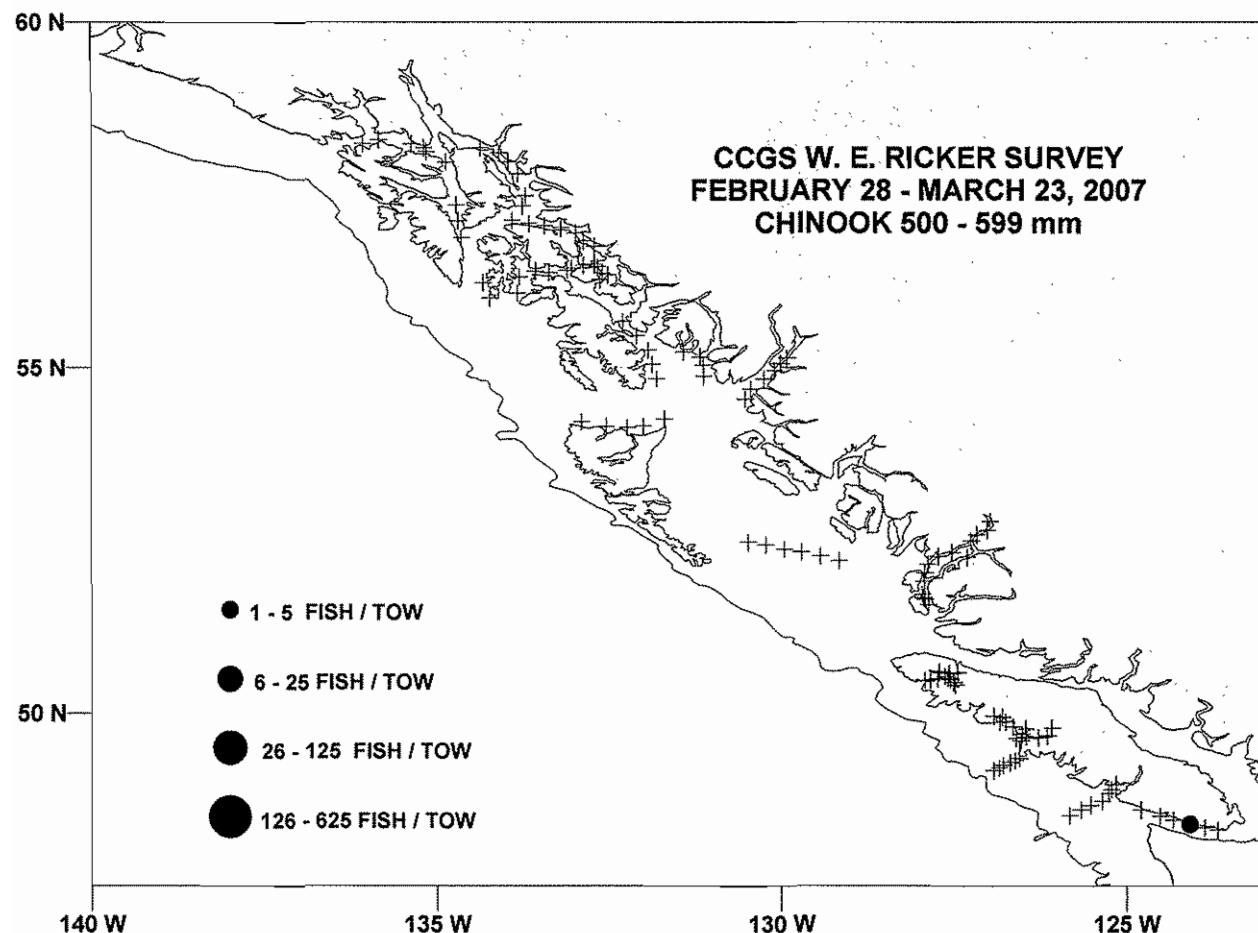

Figure 12. Distribution of catches of chinook salmon from 500 to 599 mm on the CCGS *W.E. Ricker* survey to the Gulf of Alaska, 28/02/2007 - 23/03/2007.  
Symbol size (●) is proportional to catch per tow; zero catches are shown by a (+).

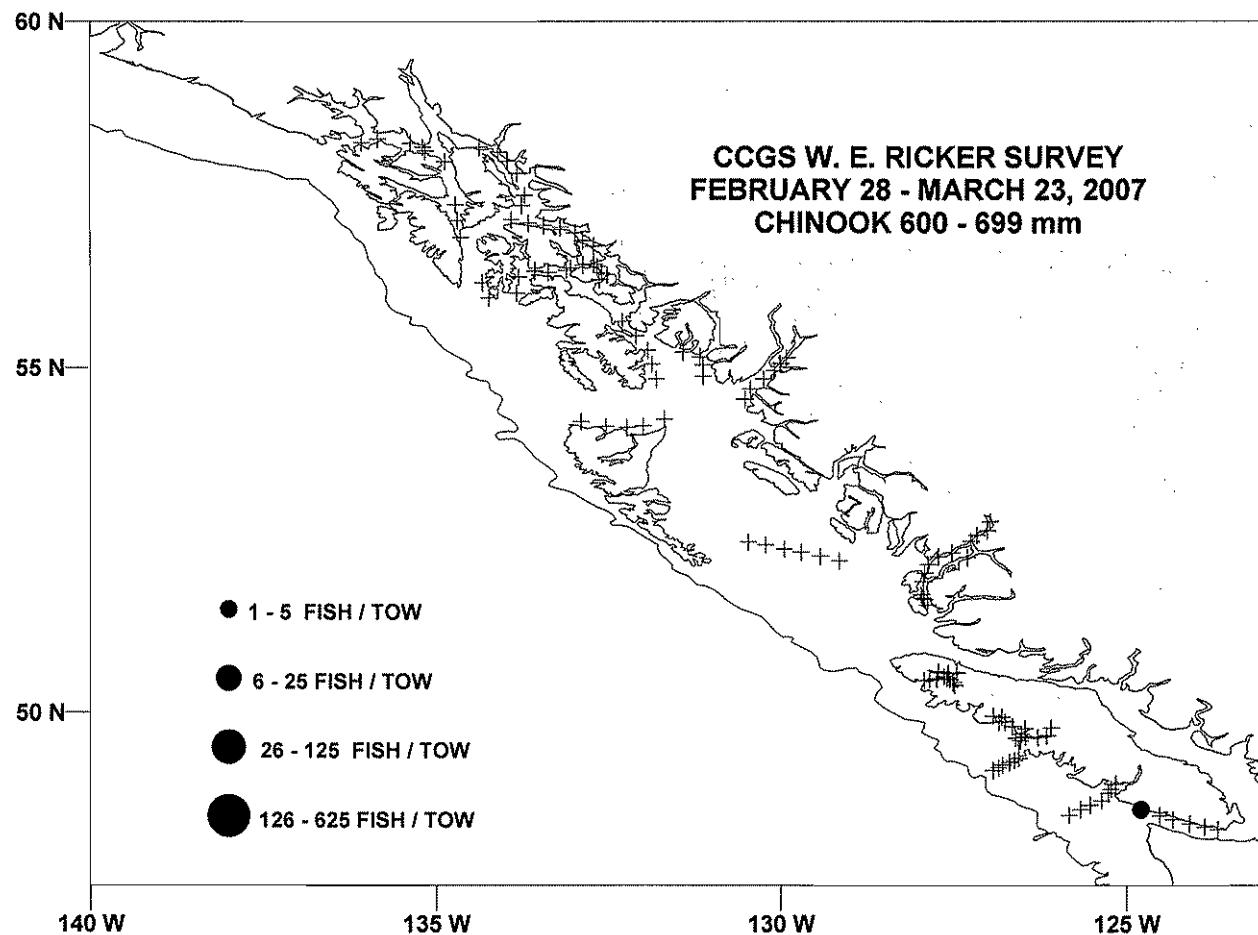

Figure 13. Distribution of catches of chinook salmon from 600 to 699 mm on the CCGS *W.E. Ricker* survey to the Gulf of Alaska, 28/02/2007 - 23/03/2007.  
Symbol size (●) is proportional to catch per tow; zero catches are shown by a (+).

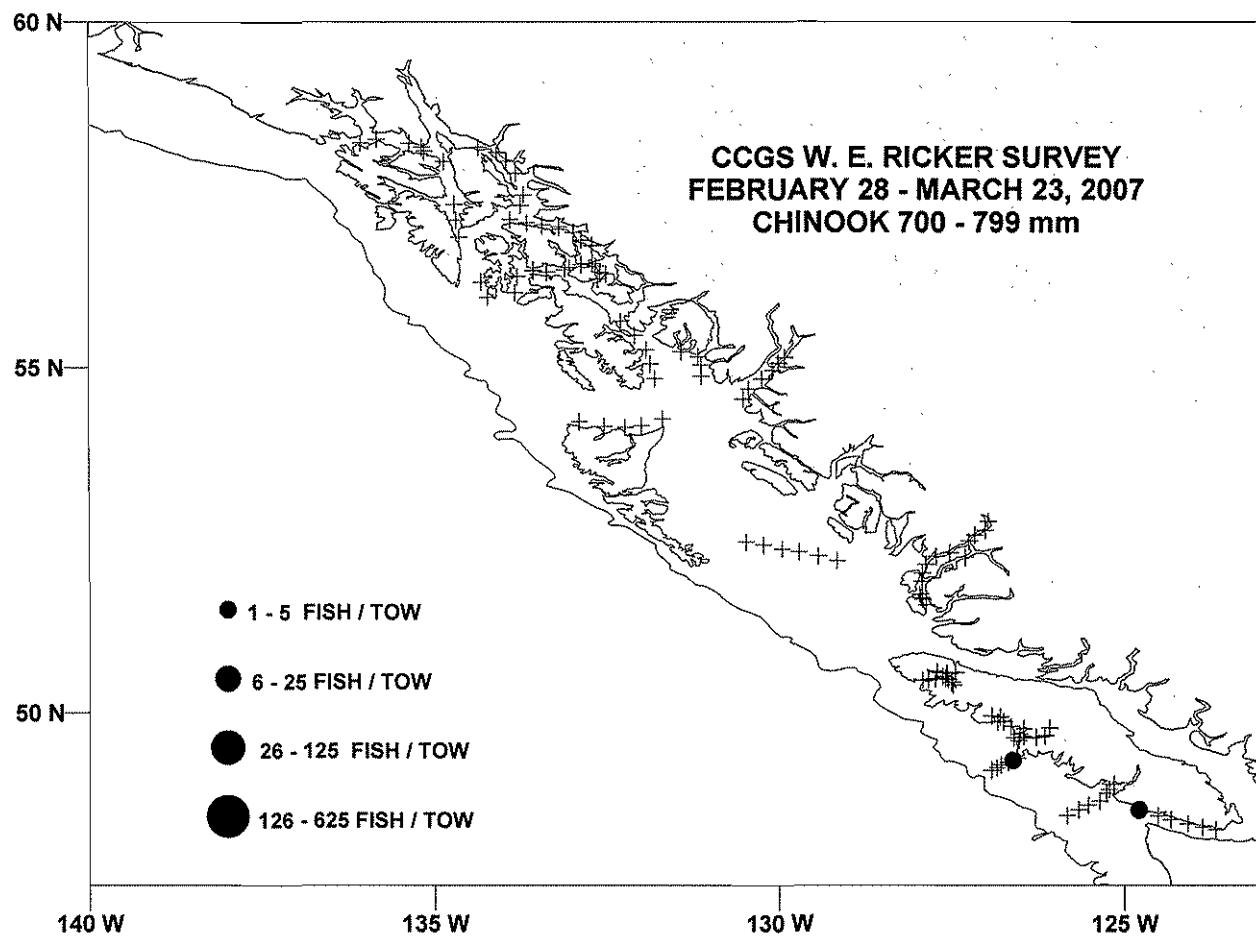

Figure 14. Distribution of catches of chinook salmon from 700 to 799 mm on the CCGS W.E. Ricker survey to the Gulf of Alaska, 28/02/2007 - 23/03/2007.  
Symbol size (●) is proportional to catch per tow; zero catches are shown by a (+).

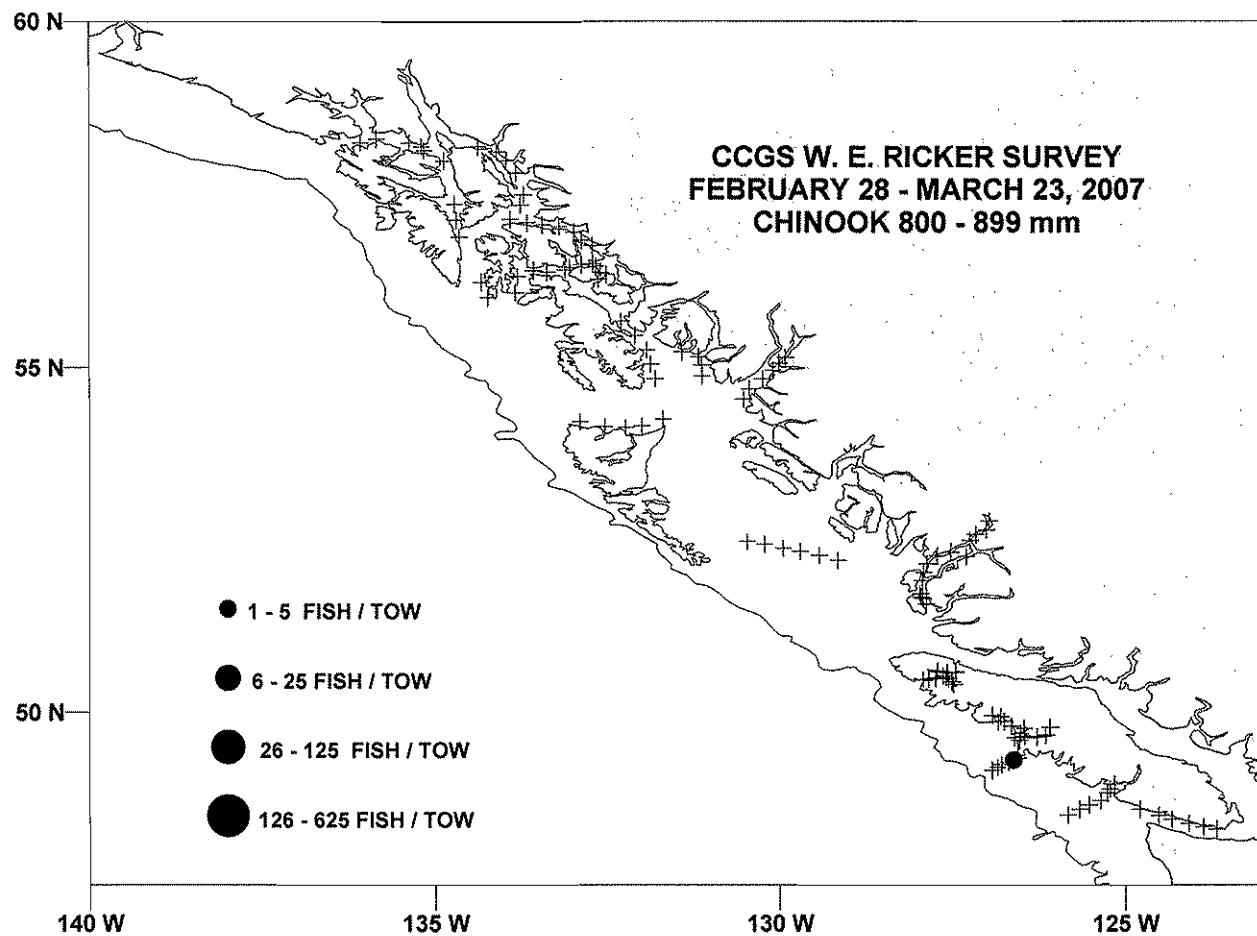

Figure 15. Distribution of catches of chinook salmon from 800 to 899 mm on the CCGS *W.E. Ricker* survey to the Gulf of Alaska, 28/02/2007 - 23/03/2007.  
Symbol size (●) is proportional to catch per tow; zero catches are shown by a (+).

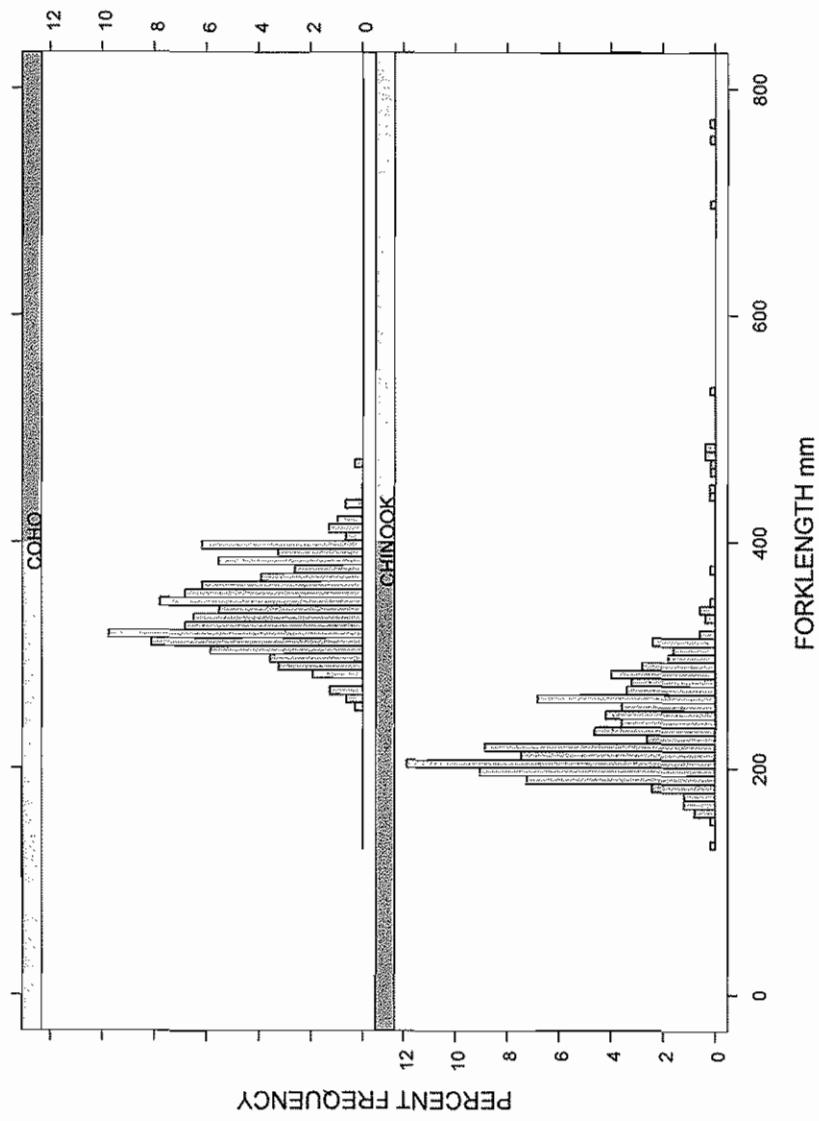

Figure 16. Size distribution (fork length; mm) of chinook and coho salmon caught on the CCGS W.E. Ricker survey to the Gulf of Alaska, 28/02/2007 - 23/03/2007.

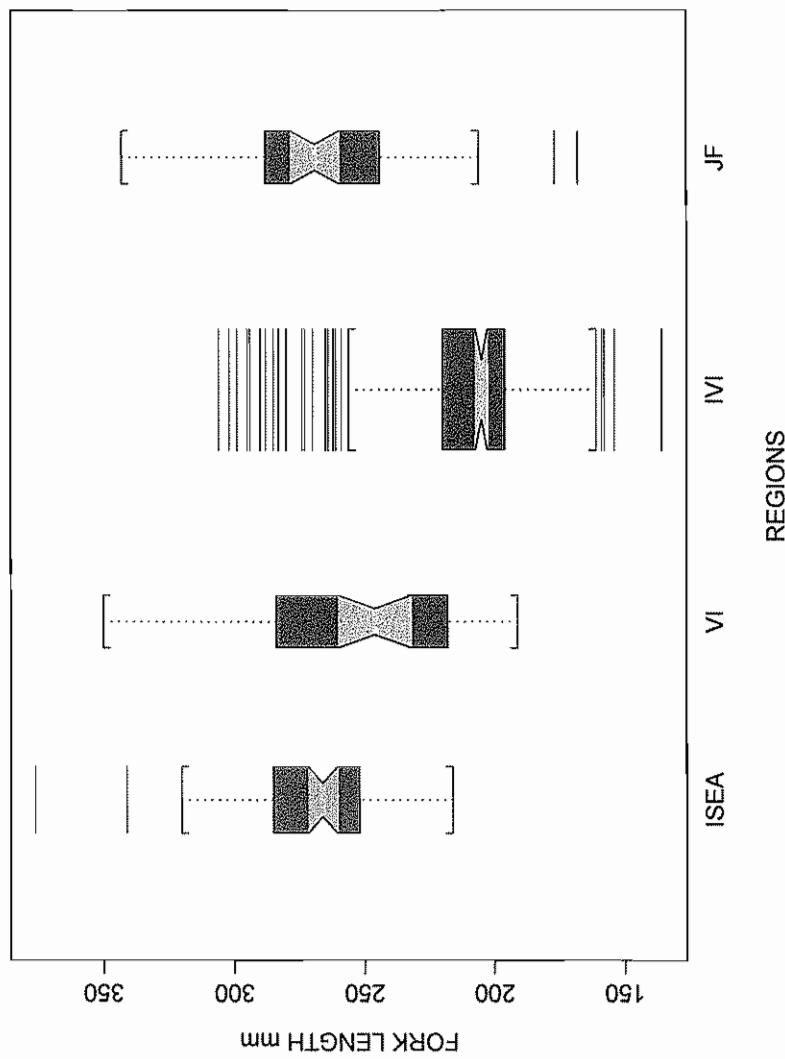

Figure 17. Boxplots of size distributions by region for juvenile chinook salmon less than 400 mm in fork length on the CCGS W.E. Ricker survey to the Gulf of Alaska, 28/02/2007 - 23/03/2007. Boxplots for each region are displayed along a latitudinal gradient that runs along the x-axis with the most northern region on the left.

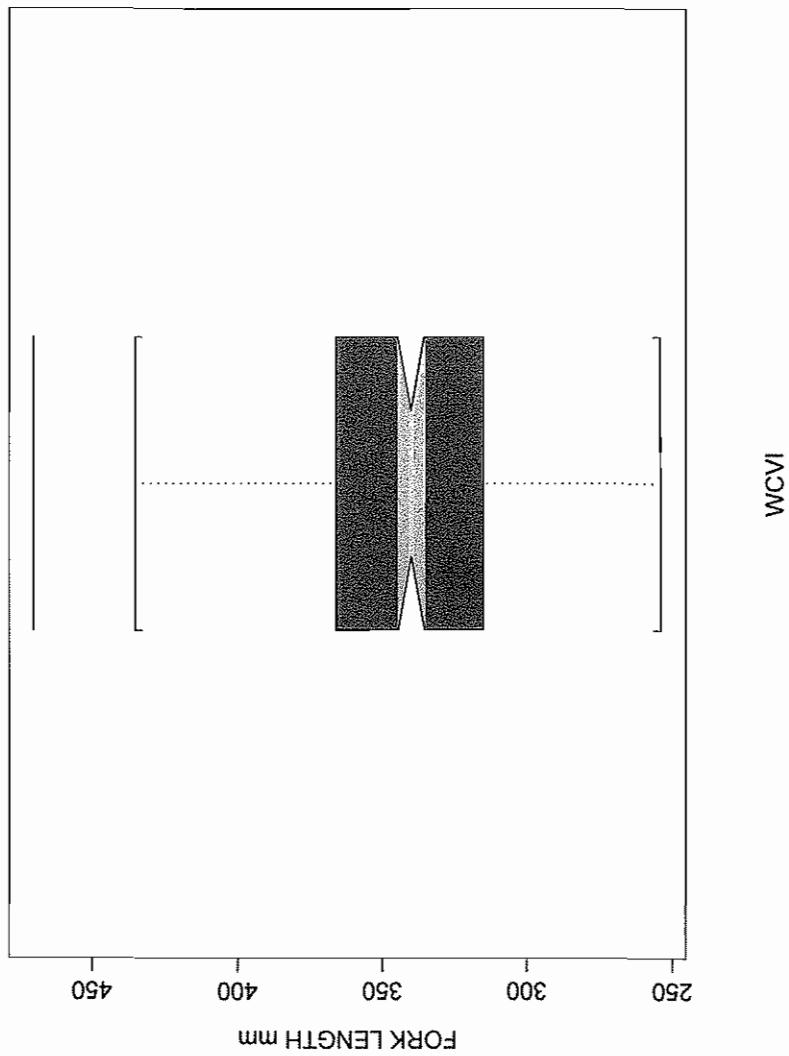

Figure 18. Boxplot of the size distribution of juvenile coho salmon on the west coast of Vancouver Island on the CCGS *W.E. Ricker* survey to the Gulf of Alaska, 28/02/2007 - 23/03/2007.
